I DEDICATE THIS BOOK TO MY FATHER,

GEORGE ELLWANGER,

WHO HAS DONE SO MUCH TO IMPROVE HORTICULTURAL TASTE, AND
INCULCATE

A Love for the Beautiful.

HE HAS EVER TAUGHT, AND PROVED BY HIS LIFE, THAT MUCH OF THE
PUREST HAPPINESS IS FOUND IN

Active Employment in the Garden.

I will not have the mad Clytie,
Whose head is turned by the sun ;
The tulip is a courtly queen,
Whom, therefore, I will shun ;
The cowslip is a country wench,
The violet is a nun ;
But I will woo the dainty rose,
The queen of every one.

The pea is but a wanton witch,
In too much haste to wed,
And clasps her rings on every hand ;
The wolfsbane I should dread :
Nor will I dreary rose maryl,
That always mourns the dead ;
But I will woo the dainty rose,
With her cheeks of tender red.

The lily is all in white, like a saint,
And so is no mate for me ;
And the daisy's cheek is tipped with a blush,
She is of such low degree ;
Jasmine is sweet and has many loves,
And the broom's betrothed to the bee ;
But I will plight with the dainty rose,
For fairest of all is she.

—THOMAS HOOD.

“ God *Almighty* first Planted a Garden, and indeed it is the Purest of Human pleasures. It is the Greatest Refreshment to the Spirits of Man ; without which *Buildings* and *Palaces* are but Grosse Handy-works : And a man shall ever see that when Ages grow to Civility and Elegancie, Men come to *Build Stately* sooner than to *Garden Finely* ; As if *Gardening* were the Greater Perfection.”—BACON.

INTRODUCTION.

THERE have been so many works on the rose produced within the past twenty years, several of them being very valuable and interesting, that a few words of explanation may not be out of place, to explain why it was thought desirable to add to the number. The most useful of these compilations are English works, but the differences of climate, etc., render necessary, for this country, a modification and change in the directions for culture ; the same reasons will lead us to select a somewhat different list of varieties for general cultivation from what would be chosen by English Rosarians ; besides all this, there is the expectant feeling which impels all authors, that the half has not been told, that in a subject like this, no compilation can ever be deemed perfect or final. New varieties, new classes and types, are being produced ; by experience we learn that modifications of old established principles are

often necessary, and therefore fresh gleanings from the rose garden will ever be acceptable and interesting when coming from observing and loving devotees of La Reine.

While, therefore, this book neither expects nor desires to supersede its predecessors, it asks admission to their fellowship, hoping that it contains enough that is distinctive and of merit to be considered companionable.

THE ROSE.

CHAPTER I.

CLASSIFICATION.

No two books, treating of the rose, exactly agree as to the different groups under which roses should be classed, and those who expect some slight variance in this work from what has preceded it, in other compilations, will not be wrong in their conjectures.

There has been such an infinitude of crosses made between different groups, by means natural and artificial, that it would be rather remarkable to find two writers who would assign the same varieties throughout, to the same classes. So it is that, by the various conjectures and opinions of the different authors, much confusion and perplexity has been engendered. Some, in order that the character of a variety may be

known as nearly as possible, make many groups, classes, divisions, and subdivisions enough to make the head of the reader swim in a sea of perplexity ; others, in order to avoid a multiplicity of groups, narrow the classification to a few divisions, and in so doing, bury completely the distinguishing characteristics of a variety. The former, besides arranging Hybrid Perpetuals into groups of Hybrid Noisettes and Hybrid Teas, further divide them into such groups as Hybrid Bourbons, Rose de Rosomene, Rose de Trianon, etc. The latter would divide all these among Hybrid Perpetuals. I confess to leaning towards this latter class ; but where we have distinguishing characteristics that are very marked, and other new varieties of the same or similar peculiarities, are following, it seems desirable to provide a distinctive name and division for them. Thus, when Guillot introduced La France, it was appropriately placed among the Hybrid Perpetual Roses, although known to have originated from the seed of a Tea Rose. It would have been unwise to have made a class for the exclusive benefit of this beauty, trusting that worthy companions might in the future be found for

her ; but now that we have Cannes La Coquette, Cheshunt Hybrid, Mme. Alexandre Bernaix, and those of Mr. Bennett's raising, it seems not only desirable but necessary to group them by themselves. The same is the case with the Hybrid Noisettes ; both of these classes are being added to annually, and are now of very great importance. On the other hand, such groups as the Hybrid Bourbons are rapidly receding from prominence, and in order to simplify matters their disintegration should be made complete ; the different varieties that are deemed worthy of being retained can be placed among the Hybrid Perpetuals or the Bourbons, according to their more prominent characteristics.

CHAPTER II.

THE FAMILIES OF ROSES IN GENERAL CULTIVATION.

Part I.—Summer Roses. Those which bloom but once during the season, in the months of June and July.

CLASS 1.---CLIMBING OR SARMENTOUS ROSES.

The Ayrshire Rose (*Rosa Arvensis Hybrida*).—These roses, of English origin, are of slender, rapid growth, having five leaflets, often running fifteen or twenty feet in one season, and are of use in covering buildings, unsightly objects, etc. They are somewhat less hardy and less valuable than the hybrid climbers and prairie roses. They do not require rich soil, and should be pruned very little, or not at all. Bennett's Seedling, Queen of Ayrshires, Queen of Belgians, and Ruga, are the leading sorts.

The Banksia Rose (*Rosa Banksiæ*) is a native of China, named in honor of Lady Banks by the

botanist Robert Brown. It was brought to England in 1807. The flowers, very small, resembling double cherry blossoms, are produced in clusters early in the season, and have, generally, a decided violet perfume ; indeed I doubt whether many persons, if blindfolded, could by the odor distinguish them from violets. The wood is very smooth, slender, and of rapid growth. The leaflets are often but three in number, are long, dark, and lustrous. Not being hardy they can have no great value at the North, but in the Southern States they form a very desirable group. The best known sorts are Alba Grandiflora, Fortunei, White and Yellow. They should be sparingly pruned.

Boursault Rose (Rosa Alpina).—This is a distinct but worthless group, which receives its name from M. Boursault, a Parisian rose amateur. Most of the varieties are free from thorns and have long, flexible, reddish-colored shoots. Amadis, or Crimson Boursault, is the one most esteemed.

The Evergreen Rose (Rosa Sempervirens), with seven leaflets, has much in common with the Ayrshire, but is characterized by dark green

foliage, which is retained till dislodged by heavy frosts ; they are of the same hardiness as the Ayshires and require the same freedom from the pruning-knife ; the knife should only be applied to cut out entirely shoots that require thinning. There have been several pretty varieties of this group sent out, but Félicité Perpetuelle is perhaps the best representative, and the only one we would commend for cultivation.

Hybrid Climbing Roses (*Rosa Hybrida Scandens*).—This class takes in those sorts for which it is difficult to find a group where they can be appropriately placed ; it gathers in waifs and is a kind of orphan asylum, a place of refuge for the abandoned and unknown. No varieties in this group are of any great value ; the old sorts, Mme. d'Arblay and the Garland, once the best known, are now almost forgotten. Those which are most grown are Fortune's Double Yellow, recently sent out under the name Beauty of Glazenwood, and La Saumonée.

The Many-Flowered Rose (*Rosa Multiflora*), five to seven leaflets, is a native of Japan, introduced into England by Thunberg in 1804. It flowers in clusters, and continues for some time

in bloom ; the flowers are double, small, and of no great beauty. The shoots have comparatively few thorns, which come in pairs. De la Griferaie is in England considered valuable as a stock on which to work the climbing teas and some other roses ; we believe it may be good for this, it is not good for anything else. Grevillia, or Seven Sisters, generally sent out under the latter name, is propagated to considerable extent in this country, and is principally called for by tree peddlers, who make large sales of it, by means of exaggerated colored plates, accompanied by untruthful descriptions. It is tender as the Tea-scented Noisettes, and is in every way inferior to them.

The Prairie Rose (Rosa Rubifolia) is much the most valuable of all the non-remontant climbers. It is indigenous to the country, being found in Michigan and many of the Western States. Seeds of the common variety were sown about 1836, by Messrs. Samuel and John Feast of Baltimore. The seedlings from this sowing were fertilized by surrounding flowers, from some of the best varieties of roses grown at the time, and from this lot came Baltimore Belle and

Queen of Prairies, the two best-known sorts. The foliage is rough, large, 5 to 7 leaflets, generally of a dark green color ; for rapidity of growth they equal or excel the Ayrshires, and surpass all climbers in hardiness. They bloom in large clusters late in the season, when other summer roses are past and have gone their way, and succeed over a greater extent of territory than any other climbers. Although decidedly inferior in quality to the Tea - Noisettes and Climbing Teas, their hardiness and superior vigor of growth make them of great value where the more beautiful members of the sisterhood are too delicate in constitution to be made useful. When, then, it is desired to cover walls, trellises, old trees, unsightly buildings, etc., with roses, none will be found to do the work so efficiently as varieties of the Prairie Rose. It is very desirable that further development of this important class should be made ; we should endeavor, by artificial fertilization, to produce hybrids, blending Hybrid Perpetual, Bourbon, and Noisette with the Prairies. This, with the more double varieties, is somewhat difficult, as I found in experiments made under glass last winter. I

attempted to fertilize blooms of Baltimore Belle, Gem of Prairies and Queen of Prairies, by different varieties, such as General Jacqueminot, Safrano and Solfaterre, but the only seed I obtained was from one bloom of Gem of the Prairies fertilized by General Jacqueminot. The pistils of the Prairie Roses are glued together, as it were, and make fertilization very difficult ; Gem of the Prairies, itself a hybrid, is the only one on which seed is often found in the open air, therefore we would probably be far more successful in making crosses by using some of the more single varieties.

The most desirable of the class are Anna Maria, Baltimore Belle, Gem of the Prairies (the only variety that is fragrant), Queen of the Prairies, and Triumphant. Baltimore Belle is the most beautiful, but seems to contain some Noisette blood, which makes it less hardy than the others ; it is sufficiently robust, however, to withstand all ordinary winters. The Prairie Roses, like all climbers, should be sparingly pruned.

CLASS 2.

Austrian Brier (*Rosa Lutea*).—This is a native of the South of Europe, having single flowers, of a yellow or coppery-yellow color ; leaflets 7 to 9 in number. The shoots are of a chocolate color, well fortified with spines. It is very hardy, and from its color and hardiness offers inducements to the hybridizers, but they will find some difficulty in getting it to seed. These roses must not be severely pruned or there will be an utter absence of flowers ; it is only necessary to cut away shoots that are decayed or need thinning and merely pinch the tops of shoots that are left. It is a small but interesting family, and gives us the only hardy yellow roses that are of value. There are three varieties worth growing, the Copper, Harrisonii, and Persian Yellow. The foliage of this class has a slight odor like the Sweet Brier.

The Damask Rose (*Rosa Damascena*) is found native about Damascus and various portions of Syria, from whence it was brought to Europe about 1573. It is in a large degree the

founder of the Hybrid Perpetual Roses. From this class, and also from the Provence, most of the rose-water is distilled. The Damasks have pale green leaves (5 to 7 leaflets), green shoots, with numerous spines, are of vigorous growth, and very hardy ; the flowers are mostly flat, of light colors, and very fragrant. They need but little pruning.

Mme. Hardy and Mme. Zoutman are the only ones worth cultivating, they are both very valuable white roses, albeit the first-named is “ green-eyed, like jealousy, envious, it may be, of the latter, who, though not of such a clear complexion, is free from ocular infirmities.”

The French Rose (Rosa Gallica), in spite of its name, has not been traced to any country, but is generally credited with being a native of Europe. It is very hardy, of compact growth, requiring close pruning.

The varieties in this class have very dark leaflets, 5 to 7 in number ; though beautiful, they are superseded by various Hybrid Perpetuals of the same shade, and can no longer be recommended, except for large collections. The

best of them are Boule de Nanteuil, Oeillet Flamand, an odd, striped variety, and Triomphe de Jaussens.

The Hybrid China Rose (Rosa Indica Hybrida) has arisen from various crosses among the French, Provence, and other summer kinds, with the China, Noisette, and Bourbon Roses. For a long time the varieties of this class were our most beautiful and cherished roses, but, like nearly all of the summer sorts, they are outshone and outlasted by various Remontants. In this connection it may be remarked that about one-fourth of the roses which are sent out as Hybrid Perpetuals should properly be placed among the Hybrid Chinas, for the flowers which they produce in autumn are the exception and not the rule. A Hybrid Perpetual may be described as a Hybrid China which blooms more than once during the season ; if this classification were carried out, we should to-day be growing many more Hybrid Chinas and many less Hybrid Perpetuals. Raisers dislike to call a new variety Hybrid China, if by any stretch of the imagination, or from having seen a bloom during the autumn, they think people can be persuaded that

they are getting a Remontant. To call a new variety a summer rose is to sound its death-knell, and no amount of adjectives in the superlative degree can resuscitate or afford it sufficient stimulus for more than a brief existence. People no longer buy summer roses, at least ninety-nine out of one hundred do not, *but unless the description of the raiser particularly states to the contrary* (that they are free autumnals) they are, all the same, pretty likely to get a number of them, and in the course of a few years will discover that many beautiful roses which they bought for Hybrid Perpetuals are simply summer roses which occasionally, or very rarely, grudgingly yield a few autumn flowers. In this book, therefore, many varieties will be found described as Hybrid Chinas, which are catalogued, by nurserymen, as Hybrid Perpetuals.

On account of the diverse parentage of the varieties in this group, coming from so many different classes, there is great dissimilarity in the appearance of the different sorts, but most of them are rapid growers, with long, flexible shoots ; smooth, luxuriant foliage ; large, rather numerous, thorns ; globular or cup-shaped flow-

ers, which are freely produced in their season. Those of vigorous growth, and most of them are such, require but little pruning. Many of them make beautiful Pillar Roses, and can be used as climbers in positions where extreme rapid growth is not required ; in such places they make the best summer climbers that we have.

“ It is time, I think, for some alterations in the nomenclature and classification of the rose. When summer roses—roses, that is, which bloom but once—were almost the only varieties grown, and when hybridisers found a splendid market for novelties in any quantities, new always, and distinct *in name*, the subdivisions yet remaining in some of our catalogues were interesting, no doubt, to our forefathers, and more intelligible, let us hope, than they are to us. Let us believe that it was patent to their shrewder sense why pink roses were called Albas, and roses whose hues were white and lemon were described as Damask. Let us suppose that they could distinguish at any distance the Gallica from the Provence Rose, and that when they heard the words Hybrid China, instead of being reminded, as I am, of a cross between a Cochin and a

Dorking fowl, they recognized an infinity of distinctive attributes which estrange that variety from the Hybrid Bourbon in the most palpable and objective form. But now that these summer roses are no longer paramount—rapidly disappearing, on the contrary, before the superior and more enduring beauty of those varieties which bloom in summer and autumn too ; now that several divisions formerly recognized are gone from the catalogues, and others include but two or three able-bodied roses on their muster-roll—it would be advisable, I think, to ignore altogether these minor distinctions, and to classify as summer roses all those which bloom but once. Not without a painful sigh can we older rosarians witness the removal of our old landmarks—not without a loyal sorrow do we say farewell to friends who have brightened our lives with so much gladness ; but we cannot long remember our losses, surrounded as we are by such abundant gains, and the tears of memory must pass away as quickly as the dew in summer.”*

We think within a few years the suggestion of Canon Hole will be partially carried out by

* S. Reynolds Hole.

nurserymen in their catalogues, but it would yet be well to keep in separate groups the Summer Climbers, the Austrian Brier, and Moss Roses. What remains of such old classes as the French, Provence, Damask, Hybrid Bourbon, etc., may well be grouped with the Hybrid Chinas.

The best of the old Hybrid China roses are Chênédollé, so called from a member of the Chamber of Deputies in France, a vivid red of large size ; Coupe d'Hébé (who would not quaff nectar from this ?) ; Mme. Plantier, a valuable white rose for massing and for hedges ; and Paul Ricaut, still one of the most beautiful roses — alas that it blooms but once !

The Moss Rose (*Rosa Centifolia Muscosa*) is believed to be a sport from the Provence Rose, and was introduced to England from Holland, about the beginning of the seventeenth century. They are distinguished from other roses by the moss-like substance which surrounds the flower-buds, and by the marked Provence scent. The shoots are thickly covered with small spines. They are very subject, as a class, to mildew, and, with a few exceptions, require close pruning, rich soil, and high culture. On account of their

beautiful buds they are great favorites with every one, and form decidedly the most valuable group of all the summer roses. The finest varieties of the race are Common Moss, Crested, and Prolific or Gracilis. Most of the kinds have 7 leaflets.

The Provence Rose (*Rosa Centifolia Provincialis*), or Cabbage Rose, is supposed to have been known to the Romans, and derives its botanical name from the great number of petals or flower-leaves. Its origin is not known, but growing abundantly in Provence, the South of France, has received that name, though the French themselves always call it by the botanical name of Rose à Cent-Feuilles. Their habit is somewhat drooping and straggling, the foliage massive; the flowers are generally of globular form and of delightful scent, so that to say a variety is as fragrant as the Cabbage Rose is commendation enough, so far as scent is concerned. This class demands good culture and close pruning; though but few in numbers, it was formerly an important group, and will ever be remembered through the Common Provence, or Cabbage Rose, a variety which, though blossoming but once, should be found in every col-

lection of any size. None others are worth cultivating except the highly scented Crested Provence, which is better known as Crested Moss, and appropriately placed with the Mosses.

The Sweet-Brier (*Rosa Rubiginosa*), or Eg-lantine, with 7 leaflets, is found growing wild in different countries, but the variety known as Common Sweet-Brier, a native of England, is the only one worth growing. It is almost needless to remark that the pink flowers, which are single, possess interest only for the botanist or artist ; it is the leaves of the plant which are so attractive to general cultivators. After a warm spring shower, or when moistened by the morning or evening dew, the foliage gives out a delightful perfume, *sui generis*, equalled by few rose-blooms. Any garden of considerable size should certainly contain a few plants of this favorite rose of the poets ; they may be planted individually, or in hedges, as they bear clipping without injury.

The Scotch Rose (*Rosa Spinosissima*), called by the French, Rosier Pimprenelle, is, true to the botanical name, the most thorny of all roses ; but, though possessing some merit, has almost

passed out of cultivation. It is a native of England and Scotland, and many varieties have been raised from seed and sent out by Scotch nursery-men, the names of which are quite forgotten, most of them deservedly so. They are of compact growth, very hardy, generally 9 leaflets, and produce small flowers very early in the season ; they require but little pruning. The two varieties which are perhaps most grown are two hybrids, Stanwell's Perpetual and Souvenir of Henry Clay (raised in America) ; these give a few flowers in autumn in addition to those in spring.

Part II.—Perpetual or Autumnal Roses.

Blooming more than once during the season, many of them continuously from June to November, or until cut off by the frost.

CLASS 1.—CLIMBING OR RUNNING ROSES.

All of these will thrive in any ordinary, good garden-soil, that is free from standing water. The more vigorous varieties should have but little pruning ; generally to thin out branches that crowd the others will be all the knife-work required.

Hybrid Climbing Roses (*Rosa Hybrida Scandens*) are of modern origin and come from various sources ; the greater number are sports of various Hybrid Perpetuals ; several of them have an extra vigor of growth at the expense of freedom and size of bloom, but one variety, Climbing Jules Margottin, is not only one of the strongest growers among them, but yields fully as many flowers and of quite as good quality, as the parent plant. None of them make growth enough to cover large buildings, but for growing on a trellis or pillar they are very desirable. We are likely to have many valuable additions to this class in the near future ; it is already an important group. Besides Climbing Jules Margottin, the most valuable members of the group which we have tested are Reine Marie Henriette, Princess Louise Victoria, and Climbing Victor Verdier. The former was raised from the Climbing Tea, Mme. Berard, fertilized by General Jacqueminot ; it is a highly scented red rose, somewhat resembling Cheshunt Hybrid, and though not a free autumnal sort will give a number of blooms throughout the summer months. Climbing Victor Verdier differs mainly from the

parent in being of stronger growth, the flowers are somewhat smaller, and less freely produced. Climbing Edward Morren, Bessie Johnson, and Mdle. Eugénie Verdier are new varieties which we have not seen in flower but are well spoken of. Other varieties in the class are Catherine Bell and Red Dragon. Glory of Cheshunt, raised from Charles Lefebvre, is a new variety sent out by G. Paul, of Cheshunt, England. We saw this in flower, during a visit to Cheshunt in August, 1880, and were very favorably impressed with it ; should it succeed as well here as there, it will be the best rose of the class. It is a vivid crimson, freely produced, and of vigorous growth ; it must be a natural hybrid, or cross, as no seedling of Charles Lefebvre yet produced will compare in vigor of growth with this new sort.

The Microphylla or Small-Leaved Rose (*Rosa Microphylla*) is a native of China, and brought from there to England in 1823. The leaf-stalks are covered with numerous small leaflets, which give a name to the class. They are not quite hardy and have with one exception but little value. Alba or Alba Odorata seems to have some Tea blood ; the flowers are a pale yellowish

white, often pure white, and highly scented. This is a valuable rose south of Washington.

The Noisette or Champney Rose (*Rosa Moschata Hybrida*) is of American origin. From the seed of the White Musk Rose fertilized by the Blush China (Bengal), John Champney, of Charleston, South Carolina, raised a variety which was called Champney's Pink Cluster. A few years after, Philippe Noisette, a florist, also of Charleston, raised from the seed of Champney's Pink Cluster a blush variety, which he sent to his brother, Louis Noisette, of Paris, France, under the name of Noisette Rose, not giving credit to Mr. Champney, as the originator of the class, which has ever since borne the wrong title of Noisette Rose. Louis Noisette received it about the year 1817. These roses, originally, had the characteristics in a great measure of the old Musk Rose, such as scent and a tendency to bloom in large clusters. The group is naturally of strong growth and nearly hardy, but the varieties which are now commonly grown have generally Tea blood in them, and have therefore in a great measure lost their hardiness and the tendency to bloom in clusters.

Among the true Noisettes, Aimée Vibert (Scandens) is decidedly the most valuable ; the flowers are small but pure white, sufficiently full, of beautiful form ; the foliage is a dark lustrous green ; growth vigorous. Others belonging to this division are Admiral Rigney or Eugène Pirolle, Beauty of Greenmount, Caroline Marniesse, Fellenberg, Ophirie, Pumila, Washington, Woodland Marguerite. None of these will have interest for small cultivators, excepting perhaps Pumila, and this is somewhat more tender than the rest. Among the Tea-scented Noisettes we have some superb roses, which have far more substance, and are much more beautiful, than those named above, albeit less hardy. They make magnificent climbers under glass, and some of them succeed fairly well at the North out of doors, if given sheltered positions. In the Southern States they are by far the finest climbers that can be grown. Maréchal Neil, which is said to have been raised from Isabella Gray, according to general opinion, is at once the best Noisette, the finest yellow, and the most beautiful variety of any class that has ever been sent out. Chromatella is another superb yellow, in

beauty of flower but a few degrees removed from the Maréchal ; but she is shy of her charms, and unless carefully treated will not display her beauty. If you would have flowers in profusion from any of these roses, you must keep away the pruning-knife, excepting when it is necessary to cut away shoots altogether. Dr. Kane and Isabella Gray are two lovely roses of American origin which demand the same skill in management as Chromatella. Solfaterre is the most useful yellow of them all ; it is hardier, of better habit, and more certain to flower than any, and the blooms are but little inferior. Besides all this, it makes the best stock on which to bud Teas, or Hybrids from the Teas, of any that I am acquainted with, surpassing that excellent stock and parent variety, Lamarque. I should advise all persons who wish to grow Tea Roses, under glass, planted in borders, to put out plants of Solfaterre, and on these, after they have made sufficient growth, to bud all but the vigorous growing Teas. Maréchal Neil and all the Gloire de Dijon type of Teas are improved by being worked on this stock. Being much less hardy than the Common Brier, it would not be so good

a foster-parent for the Teas which are worked out of doors, but under glass I know of nothing equal to it. Lamarque is a superior old white rose, which has somewhat gone out of cultivation ; but this should not be, for it retains the clustering tendency of the race and produces an immense quantity of flowers during the season. It is a noble rose. Nearly all the fine Tea-Noisettes are traced back to Lamarque. Besides those already named, we have Celine Forestier, Mme. Caroline Kuster, Triomphe de Rennes, and W. A. Richardson, all fine yellow roses, of healthy habit and easy of cultivation.

The Polyantha Remontant Rose (Rosa Polyantha) was brought from Japan about the year 1865, by Robert Fortune, and is distinguished from all other classes by its paniced blooms. This peculiarity is not generally retained, however, when crossed with other roses, at least not in most of the varieties which have been sent out as seedlings from it. M. Jean Sisley, the eminent horticulturist of Lyons, says of this class : “ It appears not to have crossed any of the other types with its own pollen. In a bed I made two years ago, with the seed in question (without practis-

ing artificial fertilization), I found pure Eglantines. I would therefore recommend rosarians to try artificial fertilization on the other types, as, if we could get Tea-scented Bourbons, and Perpetual Hybrids with flowers in panicles, we should change the whole aspect of the rose garden, and in a most interesting way modify the rose genus."

We believe some of the French rosarians have acted on this suggestion, and that they have in a measure been successful in producing roses with these characteristics, as in the two varieties Paquerette raised by Guillot-fils, and Anne Marie de Montravel raised by Rambaux and Dubreuil. In August, 1880, when in Lyons, we saw a very pretty variety of this group raised from a seedling of Polyantha crossed by a Tea. The blooms, which are of a very delicate salmon-pink, are freely produced and highly scented. If it proves to be of good habit, it will be a charming variety for bouquets, etc. It has since been named Mdle. Cécile Brunner. These three sorts are the only ones of value as yet sent out; all are remontant, which is not the case with the parent variety.

The Climbing Tea Rose (*Rosa Indica Odorata Scandens*) is a class, or division, so distinct from the other Teas, that it requires a place for itself. Nearly all the varieties catalogued in this division are descendants of Gloire de Dijon, but hybridizers are making great progress of late, and it is probable we shall soon have varieties from other strains and outcrosses to be added to the list of Climbing Teas. The origin of Gloire de Dijon is unknown. It was raised in the South of France by Jacotot, and sent out in 1853, creating a great furor in rose-circles. My opinion is, that we have in this a natural hybrid produced from the seed of some strong growing Tea, or Tea-Noisette which had been impregnated by a Bourbon of robust habit. Gloire de Dijon and its offspring are of vigorous growth when once established, but the young plants require a long time (if grown from cuttings) before they have vitality enough to push into strong growth. It is therefore a great advantage to obtain them worked on some other stock, such as Solfaterre, De la Grifferaie, or seedling Brier. The foliage is very large, thick, and lustrous; thorns comparatively few; the flowers are of

large size, globular shape, full, and with some fragrance. None of the progeny are quite equal to the mother variety in freedom of bloom, hardiness, or fragrance ; Marie Berton, a superb pale yellow rose, ranks second. Next in order come Belle Lyonnaise, Mme. Trifle, and Mme. Berard, this last being too much like Gloire de Dijon to be valuable in a small collection. The new variety, Reine Marie Henriette, which might be classed with these, has already been mentioned and described among the Hybrid Climbers. This sort, unlike the Gloire de Dijon race, will make strong plants grown from cuttings, rooting and growing as freely as General Jacqueminot. Besides these varieties, we have Climbing Devoniensis, a sport from old Devoniensis and identical with it in flower, but of much stronger growth. Except Climbing Devoniensis they are more than half-hardy, and will do well out of doors in positions that are sheltered.

CLASS 2.—AUTUMNAL NON-CLIMBERS.

The Bengal or China Rose (Rosa Indica) is a native of China which was brought to Europe

some time during the eighteenth century. Two varieties were introduced, the Blush China and Crimson China ; from these a great number of seedlings have been raised, many of them crosses from Teas. Two groups are often made of these roses, but there is no necessity of this, as very few differ sufficiently to make two divisions desirable. They are of moderate, branching growth, with foliage and flowers both small. They require a rich soil and close pruning ; thus favored, they give perhaps a greater quantity of flowers during the season than any other class. They are not hardy and have no fragrance, but in spite of this are a very valuable group on account of the profusion of crimson buds which are furnished by such sorts as Agrippina. A bed of Agrippina, on a lawn, is a most desirable thing ; none of the other crimsons are quite equal to this old sort, from whatever point of view they be considered ; among them, we note Eugène Beauharnais, Fabvier, Louis Philippe. The leading varieties of lighter shades are Cels Multiflora, Clara Sylvain, Ducher, and Mme. Bureau. Two varieties of the class which have marked peculiarities are Viridiflora or Viridis-

cens, and James Sprunt. The former is probably a sport from the old Blush, or one of its immediate descendants ; its peculiarity consists in green flowers which are freely produced ; though curious, they are not attractive, and there is no value in it, save as a curiosity. James Sprunt originated in the year 1858. Rev. James M. Sprunt, D.D., a Presbyterian clergyman of Kenansville, North Carolina, divided some strong plants of Agrippina. Afterwards he observed a *single* shoot from one of these plants growing vigorously without flowers or branches ; it grew over *fifteen* feet before it showed any flower buds, the rest of the plant retaining its normal characteristics. This shoot branched out very freely the following year, and cuttings taken from it invariably retained the same climbing habit. The flowers of James Sprunt are somewhat larger and fuller than Agrippina, but are, of course, not produced till the plant has made considerable growth. It is a valuable greenhouse climber. What are called Fairy Roses are miniature Bengals ; we do not consider them of any value, the Bengals are small enough.

The Bourbon Rose (Rosa Bourboniana) was

obtained from the Isle of Bourbon and taken to France (either seeds or plants) in the early part of the century. It was noticed growing in a hedge of Bengal and Damask Perpetual Roses, and on examination proved distinct from either, but seemed to have characteristics which pertained to both. It has been considered therefore as a natural hybrid, a product from these two groups. Except in the case of varieties strongly impregnated with Tea blood, this class is sufficiently hardy to withstand all but extraordinary winters ; the tops may be blackened by the frost, but shoots will push forth from the lower buds. The varieties vary greatly in growth and other features, but most of them are of vigorous habit, and have dark, lustrous foliage. The flowers are generally of light shades and found in clusters, and are specially valuable in the autumn, when so many Hybrid Perpetuals belie their name. But it must not be overlooked that many Bourbon Roses are also shy autumnals, though mention of this is seldom made in any of the catalogues, and the impression is therefore general that all Bourbon Roses produce flowers freely in the autumn. There are several well-known

sorts, like Dupetit Thouars, Sir J. Paxton, etc., that will not produce flowers in the fall of the year at all, unless specially pruned and treated. Those which are of moderate growth require rich soil and close pruning ; such are Hermosa, Queen of Bourbons, Souvenir de la Malmaison, and the new Queen of Bedders, all excellent varieties worthy a place in a small collection. The stronger growers need to have less wood removed, but must have moderate pruning. The best of them are Appolline, Comice de Tarn-et-Garonne, Duchesse de Thuringe, Edward Desfosses, George Peabody, and Malmaison. If these have the shoots moderately cut back so soon as each is through flowering, they will give a succession of flowers from June until cut off by the frost. Souvenir de la Malmaison is the general favorite of this group, but I consider Appolline as the most valuable ; it flowers with the same freedom as Hermosa, when cut back as directed above, and has large cup-shaped blossoms of rosy-carmine that are very attractive. No collection can be complete with this variety left out.

The Hybrid Noisette Rose (Rosa Noisettiana

Hybrida) is a comparatively new group of considerable importance. The varieties of this class generally, though not always, flower in small clusters and bloom very freely throughout the season ; they are of about the same degree of hardiness as the Bourbons—that is will winter with perfect safety if given some slight protection, such as hilling up earth about the plants or covering them with loose litter or evergreen branches. It is not easy to ascertain the origin of this class, but the varieties are mostly from crosses of Bourbon on Noisette and *vice versa*. They all require pretty severe pruning. The most beautiful in the class are Madame Noman, Mdle. Bonnaire, and Eliza Boelle, a trio of white roses which might well represent the three Graces. There is too strong a resemblance between them to make all desirable in a small collection, but it is difficult to know which of them to reject. Our own preference inclines towards Madame Norman. These are the most delicate in habit ; of the stronger growing varieties which partake more of the Noisette character, Coquette des Alpes, Coquette des Blanches, and Mme. Auguste Perrin are most noteworthy.

Baronne de Maynard, Madame Alfred de Rougemont, and Madame François Pittet are worthy a place in collections of considerable extent.

The Hybrid Perpetual, or Hybrid Remontant Rose (Rosa Damascena Hybrida), is by far the most valuable, if not the most beautiful, of all groups of roses. The first varieties sent out were mostly from crosses of Bourbons upon Damask Perpetuals and Hybrid Chinas ; afterwards crosses were made with varieties of Provence, Damask, and French Roses upon Bourbons, Bengals, and Teas, and *vice versa*. The progeny of these was then recrossed with different classes, and so it is we have a group of the most heterogeneous character, combining the good and bad qualities, in greater or less degree, of nearly all the others. There are certain types in this group which gather together many varieties, in which the relationship to some one sort is readily discerned, as the Jules Margottin type, General Jacqueminot and its progeny, and the La Reine family ; but there is a vast number of sorts whose kinship cannot be traced ; this is owing to the fact that the greater number of varieties have been raised from mixed seed, where no

record was made of the names ; and also that in many cases, where the seed of different varieties was sown separately, there has often been a carelessness in making such a record, dependence being placed on the memory alone. So that many varieties whose parentage is given are oftentimes not properly traced ; it being made a matter of conjecture, or left to fallible memory to recall. The varieties differ greatly in all their characteristics, and so require somewhat different culture and treatment. Those that are of vigorous growth, as in other classes, need much less pruning than those of dwarfed habit, for if cut back too severely they run too much to wood. There have been hundreds of varieties of this class sent out, and the number of new sorts somewhat increases each year. Eugene Verdier, of Paris, has been foremost in the dissemination of new sorts, and it will be interesting to take note of the number of varieties offered by him, including those of his own raising, for a few years back. In 1872 he offered for sale 39 new Hybrid Perpetual Roses, 8 of them his own seedlings ; in 1873 he offered 45, 10 of them his own ; in 1874 he offered 46, 10 of them his

own ; in 1875 he offered 48, 12 of them his own ; in 1876 he offered 34, 10 of them his own ; in 1877 he offered 41, 10 of them his own ; in 1878 he offered 40, 10 of them his own ; in 1879 he offered 42, 8 of them his own. There are, of course, several new sorts each year which M. Verdier does not get hold of ; including these it will be seen that there are not less than 45 new Hybrid Perpetual Roses introduced each year ; perhaps one-fifth of them are worth growing, certainly not more. The rest, either from being inferior in quality to old-established sorts, or from too great similarity to them, are ultimately consigned to the rubbish heap. No satisfactory selection can be made from this innumerable class, except as made for some special end, and having some prominent features in view. We therefore give special chapters to a consideration of the best Hybrid Perpetuals for special purposes, in which the various merits and peculiarities of different varieties are discussed at some length.

The Hybrid Tea Rose (Rosa Indica Odorata Hybrida) is a new group produced from crossing Teas with Hybrid Perpetuals. This is a class

but yet in an incipient state ; within a few years it is likely there will be a great number of varieties where now there are but few ; it is also to be expected that there will be various and distinct types among them. Indeed among those we already have, La France, Cheshunt Hybrid, and Beauty of Stapleford show almost as marked variations as could be found among any Hybrid Perpetuals. In these three, we have La France, which, with a perfume peculiar to itself, is the sweetest of all roses, and equal to any in the profusion of bloom ; Cheshunt Hybrid, which shows the Tea blood in its foliage more than in any other way ; what fragrance it has is more like that of Alfred Colomb or Prince Camille than like a Tea ; it seldom shows a flower after the first of August ; and Beauty of Stapleford, entirely without scent, but with a decided resemblance to the Teas in foliage, appearance of the flowers, and profusion of bloom. These roses must prove more hardy than most of the Teas, but more susceptible to frost and of more delicate constitution than the majority of the Hybrid Remontants. Certain ones among them, as La France, Duchess of Connaught, and Viscountess

Falmouth, combine beautiful flowers with great profusion of bloom and intense fragrance ; such are the kinds that give value to the class, and unless raisers can supply new varieties in the group which combine these three qualities, they should be withheld as unfit to send out. Jean Sisley, Captain Christy, and Beauty of Stapleford may have value now, while the group is yet small, but being devoid of scent are not varieties to pattern after. Captain Christy occupies a somewhat equivocal position in this class, being seeded from a Hybrid Perpetual Rose (Victor Verdier) fertilized by the Tea Safrano, while all the others are seeded from Tea Roses fertilized by Hybrid Remontants ; but it seems eminently proper that at least all *direct* crosses between the two classes, no matter whether the seed parent be Tea or Hybrid Perpetual, should be grouped with the Hybrid Teas. These roses are all of moderate growth, and must have close pruning and be grown in rich soil. Most of them (ten varieties) were sent out in 1879 by Mr. Henry Bennett, of Stapleford, England. It is not yet known how desirable they will be for out-of-door culture, but for forcing under glass

a few of Bennett's raising are proving to be of some value. They seem to produce as many flowers in the season as do the Bengals, excelling many of the Teas proper in profusion of bloom. Beauty of Stapleford and Duchess of Westminster furnish very pretty rose-colored buds, which are unfortunately scentless. Duchess of Connaught, at a first glance, might readily be mistaken for La France, having much the same shade of color, but the flowers are somewhat smaller and of rounder form ; it is the only variety which resembles La France in perfume. Jean Sisley does not open well in the house, and is a scentless variety of rather a muddy shade of color ; we do not consider it of value. Nancy Lee is highly perfumed and gives lovely formed buds, but it is of very delicate habit. Michael Saunders and Viscountess Falmouth are two sorts of considerable substance, highly scented, which we consider valuable introductions ; the latter has a delightful blending of the perfumes to be found in the parents President (Tea) and the Moss Soupert-et-Notting, the odor of the Moss predominating. Duke of Connaught and Hon. George Bancroft are two dark roses, which will

be more valuable to the florist, if sufficiently vigorous, than all the rest ; the former is the deeper in shade, but, in spite of its breeding, is without scent ; the latter, though of lighter color, is highly perfumed ; both give beautiful buds. Pearl is a small rose with a distinct Bourbon fragrance, a good thing for cut flowers. The four new Hybrid Teas of French origin, Cannes La Coquette, Mme. Alexandre Bernaix, Mme. Etienne Levet, and Mdle. Brigitte Violet, all promise to be useful sorts. This class of roses, on account of its novelty and promise of usefulness, is now looked upon with more interest than any other, and will, in a few years, very likely prove the most popular class, excepting the Hybrid Perpetual and Tea.

The Perpetual Moss Rose (*Rosa Centifolia Muscosa*) has the same characteristics (and needs the same treatment) as the Moss Rose already described, but in addition to the June blossoming produces flowers during the summer and autumn. There are but three sorts which we consider worth growing. Many worthless varieties in the class have been sent out ; if the flowers were of fair quality, they were so seldom seen after the

month of June as to belie their name. Mme. Edward Ory and Salet both give mossy buds that are not equal in quality to other Mosses, but give them at a time of year when the others are not to be had, and are therefore very useful. Sou-pert-et-Notting is not encumbered with a superfluity of moss, if it is with a name, but we have here a large rose-colored sort, very full, of fine form, and a strong delightful perfume that may keep one sniffing for a long time before he can go away satisfied. Our eyes may brighten at the sight of other autumnal roses more beautiful than this, but there are very few sorts so grateful to that other important sense—smell. With oh ! and with ah ! and sundry other relevant remarks we may gloat over this rose, as does the street Arab inspecting the pies and confections in the window of a pastry-shop.

The Tea Rose (Rosa Indica Odorata) may well be taken as a synonym for all that is delicately beautiful. What refinement of color ; what subdued, yet powerful, fragrance do they possess ! They are indeed the centre of loveliness ; like fair maids at a reception surrounded by admiring groups, these lend beauty to the

others, which may well strive to find a near approach to their sweet presence, that perchance they may receive a smile, and borrow beauty, diffused from their chaste loveliness. There has always been a warm place in my heart for the Tea Rose, for, *sub rosa*, let me confess it, this was my first love (I fear no conjugal jealousy or censure in making this confession); a bed of Tea Roses planted near my father's house first won me as a devotee to the rose, and by foliage and flower I learned to distinguish varieties among them before I even knew the names in other classes; I should now as soon think of doing without roses altogether as not to have a bed of Teas in my garden.

Several varieties in this group were brought to England from China, their native place, in the early part of the century; among them were the Blush Tea and Yellow Tea, two varieties from which most of the sorts now in cultivation have descended. Both of these kinds are free seed-bearers, the Yellow Tea more particularly; it has beautiful buds of pale yellow, but the habit of the plant being unhealthy it has now nearly gone out of cultivation. The old Blush is also no

longer named in most catalogues; but there are many rosarians still living who cherish it in affectionate remembrance and recollect it as one of the most fragrant in the family. Most of the varieties in this group are very sensitive to any neglect, and will show very quickly whether they have met with good or ill treatment ; the soil can scarcely be made too rich for their reception, but it must be light, warm, and *well drained*. If the place chosen consist of heavy clay soil, a foot or more must be dug out, carted away, and filled up with that which is mellow. As most of the varieties are of but moderate growth, they require rather close pruning. To protect them during winter, we advise hilling up earth about the plants and then spreading over evergreen branches or *loose* litter. Care must be exercised that the plants be not embedded and packed down with a heavy mass, otherwise decay and death will ensue ; some air will needs be admitted ; the plants must be protected but not smothered.

The Tea class is much more uniform in the characteristics of the different varieties than are any of the other large groups. In judging of

their merits we lay less stress on fulness of flower than on other claims, because that most of those which have comparatively few petals are very beautiful in bud, and it is for the buds that Teas are largely prized. Thus Isabella Sprunt and Marie Guillot are two roses highly prized, but one of them is only semi-double, while the other has so many petals that they do not always unfold satisfactorily. The flowers vary very greatly in size as well as in fulness, some of them, like Canary, Caroline, and Monsieur Furtado, being quite small, and others being large, as Madame Bravy, Souvenir d'un Ami, etc.

This has now become such a large division that it is no easy matter to select out a number of varieties for commendation, but those named below are at once among the most beautiful, and, at the same time, of the most *healthy habit*—a very important feature to be considered.

Bon Silène, Isabella Sprunt, and Safrano are to be chosen for their buds only ; Mme. Falcot, a seedling of Safrano, has fuller flowers of nearly the same shade, but they are not so freely produced and the habit of the plant is more feeble. The following are fine in both bud and flower :

Bougère, Catherine Mermet, Comtesse Riza du Parc, Gérard Desbois, Homer, Jean Ducher, Jean Pernet, Madame Bravy, Madame de Vatry, Madame Lambard, Madame Welche, Marie Ducher, Marie Van Houtte, Monsieur Furtado, Niphetos (a poor grower), Perle des Jardins, Rubens, Sombreuil, Souvenir d'un Ami, Triomphe de Luxembourg. Among these Niphetos is the only one of bad growth, but it is so much the finest of the white Teas, that it should find a place in every collection of any size. Full descriptions of all these sorts will be found elsewhere.

CHAPTER III.

TECHNICAL TERMS.

THE rosarian and the hasty reader are invited to pass by this chapter, but if, unversed in rose-lore, any reader become interested in the subject, there will be found many terms, mostly botanical, which require some explanation, as presented herewith, and to which they may be glad to refer.

Anther. A rounded knob at the summit of the filament ; a portion of the stamen which contains the pollen or fecundating matter of the flower.

Armed. Provided with thorns or prickles.

Calyx. An envelope which holds the other parts of the flower ; it consists of narrow green leaves or sepals of a pithy texture ; these sepals generally cohere by their edges.

Callus. A swelling which occurs at the base of a cutting previous to the formation of roots.

Corymb. Flower stalks produced along a common stalk which rise so as to form a level top.

Disbudded. Deprived of flower buds. Flower buds are pinched or cut away, in order that those remaining will attain greater perfection.

Eye. The stamen and pistils of a flower. Sometimes this term is used synonymously with bud.

Filament. The thread-like part of the stamen which supports the anther.

Hip or Hep. The fruit or seed pod.

Hybrid. A cross, which is the product of a mixture of two different species.

Leaflet. One of the divisions of the compound leaf with which all roses are furnished ; these are attached to the petiole by minor foot stalks.

Maiden Plant. That which blooms for the first time after budding or grafting.

Ovary. The hollow portion at the base of a pistil containing the ovules or bodies destined to become seeds.

Panicle. A cluster of flowers irregularly pro-

duced from a main stem, or peduncles variously divided.

Peduncle. The stalk upon which the flower is borne.

Petal. A leaf of the flower.

Petiole. The stalk to which are attached the several leaflets.

Pistil. The columnar seed-bearing organ in the centre of a flower ; sometimes there are several in one flower ; it consists of one or more styles, one or more stigmas and the ovary.

Pollen. The fecundating powdery substance found in the anthers.

Remontant. As applied to roses that which flowers the second time. From the French verb to remount.

Sepals. Those leaves which form the calyx.

Sport. A shoot or sucker from a plant which shows either in foliage, flower, vigor of growth, or in all of them, some peculiar feature or features, distinct from the rest of the plant.

Stamens. The male organs of fructification in a flower, surrounding the pistil.

Stigma. The top portion of the pistil which receives the pollen and connects with the ovary by a tube through the centre of the style.

Style. The erect column, sometimes several combined in one, which connects the stigma with the ovary.

Sucker. A branch or shoot which proceeds from the root, or stem of the plant, just below the surface.

CHAPTER IV.

POSITION AND SOIL.

THE first requisite in the culture of roses is the selection and preparation of a suitable place for planting. This is very important, as all that follows depends upon the care used in this first step.

To begin with, then, choose the best place you have in the garden, a place where you can offer sufficient protection by means of hedges or board fences from bleak sweeping winds. When fences are used, their general ugliness can be most appropriately clothed by roses themselves. A warm, sunny position is also requisite ; if so situated that there is an exposure to the morning sun, and the hot rays during the afternoon are in part or wholly shaded, all the better, but a certain amount of sunlight is as essential to a rose's welfare as to our own, though many of us do not show our appreciation of the blessings of sunlight as gratefully as do our roses. Besides scattering

them through our gardens, roses may be made very effective planted in borders about our lawns, either individually or in groups, and also planted in beds on the lawn.

Thoughtlessness often leads people to plant roses under the shadow of overhanging buildings, or close to large deep-rooted trees ; and then there is inquiry and wonderment why the plants are always covered with mildew ? and why they do not blossom and grow as those in a neighbor's yard, where there are always beautiful roses to be seen ? There is much more in common, or should be, between animal and plant life, than is practically acknowledged by most of those who strive to grow roses. Both demand for their perfect development a sufficiency of nourishing food and drink, a pure atmosphere, a temperature as equable as possible, and *thorough cleanliness*. Let every one who plants roses bear this in mind and we shall find a wonderful improvement in the quality and quantity of the flowers.

“ Some having heard that a free circulation of air and abundance of sunshine are essential elements of success, select a spot which would be excellent for a windmill, observatory, beacon, or

Martello tower ; and there the poor rose-trees stand, or, more accurately speaking, wobble, with their leaves, like King Lear's silver locks, rudely blown and drenched by the to-and-fro contending wind and rain.

“ Others, who have been told that the rose loves shelter, peace, repose, have found ‘ such a dear snug little spot,’ not only surrounded by dense evergreen shrubs, but overshadowed by giant trees. Rest is there assuredly—rest for the rose, when its harassed life is past, when it has nothing more for disease to prey upon, no buds for the caterpillar, no foliage for the aphis—the rest of a mausoleum ! I was taken not long ago to a cemetery of this description, which had been recently laid out ; and there was such a confident expectation of praise in the pretty face of the lady who took me, that I was sorely puzzled how to express my feelings. I wished to be kind, I wished to be truthful ; and the result was some such a dubious compliment as the Sultan paid to the French pianist. The Frenchman, you may remember, was a muscular *artist*, more remarkable for power than pathos ; and he went at the instrument and shook and worried it as a terrier

goes in at rats. His exertions were sudorific ; and when he finished the struggle, with beads on his brow, the Sultan told him, ‘ that although he had heard the most renowned performers of the age he had never met one who—perspired so freely !’ Nor could I, with my heart as full of charity’s milk as a Cheshire dairy of the cow’s, think of any higher praise of the plot before me than that it was an admirable place for ferns ; and therefore, when my commentary was received with an expressive smile of genteel disgust, as though I had suggested that the allotment in question was *the* site of all others for a jail, or had said, as Carlyle said of the Royal Garden at Potsdam, that ‘ it was one of the finest fog-preserves in Europe,’ then, without further prevarication, I told the truth. And the truth is, that this boundless contiguity of shade is fatal, and every overhanging tree is fatal as an upas-tree to the rose. The rose in close proximity to a forest-tree can never hope to thrive. In a two-fold sense it takes umbrage ; robbed above and robbed below, robbed by branches of sunshine and by roots of soil, it sickens, droops, and dies.” *

* “ A Book about Roses.”

In connection with a choice of location, we must see that roses are provided with a proper soil. They will do well in any ordinary garden soil that is free from standing water and well drained. When there is too much clay, the soil can be made sufficiently friable by the application of wood and coal ashes, lime, burnt earth, etc. When, on the other hand, a soil is sandy or too light, we need to bring clay, muck, leaf mould, etc., to obtain sufficient body. This soil must, of course, be thoroughly manured and worked ; frequent spading will do a great deal toward lessening the stiffness of a heavy soil. On no account attempt to make roses grow in a wet spot ; if there be such a place which it is desired to use, let the soil be thoroughly drained by sinking tiles to a depth of four feet, or provide in some other way for carrying off the water. Where it is impossible to find a position capable of being drained by tiles from the ground being too flat, the soil may be removed to a depth of a few feet, and stones, bricks, débris of any kind, thrown in ; but whenever the water can be carried off in tiles it is better to do so.

CHAPTER V.

PLANTING AND PRUNING.

ROSES that have been grown out of pots should, if possible, be planted while in a dormant condition ; for, if removed for transplanting while the sap is flowing freely, and the plant is in vigorous growing condition, there occurs too great a shock, one from which the plant does not easily recover. All roses, therefore, taken from the open ground should be planted during the autumn or spring ; the more hardy kinds, such as the summer roses, most of the Hybrid Perpetuals, and possibly some of the Bourbons, may preferably be planted in the autumn ; the more tender sorts in the spring. Plants that have been propagated from cuttings, or layers (on own roots), should be set, as nearly as possible, as they were grown in the nursery. Budded or grafted plants should be set so that the junction of the bud or graft is about two inches beneath the surface of the soil. Planted in this way there is

much less liability of suckers from the stock being put forth, and opportunity is afforded for the plant to put forth roots from the bud or graft ; this often takes place, so that ultimately the plant is virtually on its own roots. Roses that are pot-grown can be planted at any time from April till October, but if set out during the heat of summer special care must be given in watering, etc. Respecting the sized plants which should be set out, we earnestly advise all those who can obtain them to put out plants of one or two years' growth that have made a free but not excessive growth, with well-ripened wood ; these can be obtained at most of the large reliable nurseries. Many florists do a large and exclusive business in sending by mail small plants, cuttings of a few weeks' growth ; this is all very well, to give opportunity to many people to obtain plants, which could not, owing to the lack of express or railroad facilities, be forwarded in any other way ; but these bantlings often require much care and tender nursing, and are seldom of any account until the second year from planting, for in order to promote their growth the flower buds should be kept cut off during the first year—if

allowed to produce any, they are not only not of first quality, but enfeeble the plant ; whereas older plants, carefully grown, will give effective results the first year. Some nurserymen make a practice of cutting away all the flower buds from free blooming varieties, which form on the young plants during the first year's growth ; this practice is highly to be commended ; such plants are far more valuable to the purchaser than those not so treated. Quality should always be preferred to quantity ; this is true whether respecting the plants or the flowers of roses, and one good two-year plant is worth more than six of the sucklings often sent by mail—poor, weak infants, which never should have been sent from the *nursery*—just as one good bloom of Marie Baumann, or Alfred Colomb, is worth half a dozen of Pius the IX. or Triomphe de l'Exposition.

Care must be exercised that the soil about the plant be well pulverized and no hard lumps allowed to remain in contact with the roots ; after that the plants are set out, *be sure that they are firmly pressed in* with the feet or hands ; plants that are loosely stuck in the ground can never do well. Another prominent thing to bear in mind

is : never allow the plants to lie exposed to the wind and sun, keep them covered until ready to plant. The distance apart is somewhat regulated by the vigor of growth ; the strongest growers should be put about three feet apart ; for those of weaker habit, one or two feet would suffice. In planting beds, if of more than one variety, the strongest sort should be in the centre and those of the weakest habit on the outside. It is almost unnecessary to say, that no planting should be attempted if the ground be very wet, or very dry, as during a summer drought ; and that very late in the season, whether autumn or spring, is not a good time to set out roses ; few things suffer so much from late spring planting as do roses ; if the buds have pushed forth, it is generally time and money thrown away to set out plants, *other than those pot-grown*. The reason pot-grown plants can be used after the others is that the soil in which they are grown can be retained when the roses are removed from the pots, and the plants continue to grow without check. Pot-grown roses must not be immediately exposed to the rays of a hot sun ; if planted out they should receive some shade for a few days, and be carefully

watered. Water must not be applied during the heat of the day, but in the morning or evening.

The pruning of roses is one of the most important features connected with their culture, but no directions that can be given will prevent some mistakes from being made. It is practical experience alone that will enable one to determine just what is to be done in each individual case, and just how to do it ; but the general principles that should govern can be easily stated and comprehended. I would recommend the operator to procure what is known as a pruning-knife, having a hooked blade, and also a secateur, or pair of pruning-shears ; the latter is better for cutting away shoots from the centre of a bushy plant and is the quickest and most easy to handle, but where a very smooth cut is desired, the pruning-knife will be found most effective ; it is also less likely to bruise the bark. All roses that come from the open ground should be pruned before planting, or immediately after. Many persons who are careless, or not informed, set out the plants just as they come from the nurseries ; under such circumstances the plants cannot thrive, the sap has too many buds to nourish and a weak

growth ensues. The shock from transplanting must be met by a shortening of both shoots and roots ; the shoots being shortened the number of buds to draw upon the sap is reduced and a more vigorous growth follows. Not only should all bruised roots be pruned, cutting away to the sound part, but also all those large ones that are uninjured, for by this they are induced to put forth small roots of fibrous nature, which are of great assistance in promoting health and vigor of plant.

The cut made in pruning should be as nearly horizontal as possible, so that there shall be but a slight exposure of wounded surface ; it is generally preferable to cut from the inside, and to see that the top bud which is left points outward. If the plants bleed after the operation the surface of the cut should be smeared over with wax or other substance ; often a coating of mud will answer. Roses are pruned both early in the spring and in the autumn ; we prefer the former season, but when done then, care must be had not to put it off too late, for if not attended to early, the sap will have pushed toward the upper buds, and when pruned there will be

bleeding or exuding of the sap. The pruning should therefore take place while the plants are dormant, and before the sap begins to flow. The chief objects to be held in view in pruning are the formation of a symmetrical plant, and to promote the formation of bloom buds. To secure these the following general rule must be observed : *Plants of delicate habit and weak growth require severe pruning ; those that are vigorous in growth should have the shoots only moderately shortened, but the branches well thinned out.* If varieties of vigorous habit are closely pruned, a great growth ensues and very few flowers ; hence it is of the utmost importance to know the character of the variety that is to be operated on. Besides pruning the plants in March, a summer pruning is desirable with many varieties of Hybrid Perpetuals, so soon as the June blossoming is over, in order to induce the formation of flower buds later in the season.

CHAPTER VI.

MANURES.

WE trust that impatient readers will not pass by this chapter with turned-up nose and a sniff of disdain, for the subject is an important, albeit an unpleasant one, to handle. We shall make it short, if not sweet.

Manure, if new, should never be applied so as to come in contact with the roots, but may be spread on the surface of the earth as a mulch ; this is often done with advantage in the autumn, digging it in in the following spring. Manure which is to be dug in about the plants must be decomposed, and may be advantageously mixed with a compost of good turfy loam and spent hops ; all animal manure is useful for roses, particularly droppings of the cow, pig, and sheep ; these mixed with a compost as named form the best fertilizers that can be used. Besides these, the cleanings from the poultry house, night soil, soot, bone-dust, and guano will all be found ex-

cellent, but nothing I believe is better than a mixture—one-third each—of cow-dung, rotted hops, and turfy loam. Horse-dung is much better for heavy soils than for light, and cow-manure does not do so well for soils inclining to be wet. In the hot, dry weather, which we often have in summer, a good watering of liquid manure will be of very great benefit to the plants, more especially during the time of the formation of flower buds. “The happy rosarian who has a farm-yard of his own will, of course, have a large covered tank therein, for the reception and preservation of liquid manure. At all times, of drought especially, this will be more precious as a restorative and tonic to his roses than the waters of Kissingen, Vichy, or Harrowgate to his invalid fellow-men. Only let him remember this rule of application—weak and oft rather than strong and seldom. I bought my own experience by destroying with too potent potations—forgetting that infants don’t drink brandy *neat*—the delicate fibrous rootlets of some beautiful rose-trees on the Manetti stock.”* Night soil would be found a most valuable manure, if peo-

* S. R. Hole.

ple would only rightly prepare and use it, but each rosarian points to the other and wonders why no one is found to make use of this valuable commodity which now goes to waste, but no one takes hold. “ The Romans revered Cloacina, the goddess of the sewers, and the statue which they found of her in the great drains of Tarquinus was beautiful as Venus’s self ; but they honored her, doubtless, only as a wise sanitary commissioner who removed their impurities, and, so doing, brought health to their heroes and loveliness to their maidens. They only knew half her merits ; but in Olympus, we may readily believe, there was fuller justice done. Although weaker goddesses may have been unkind—may have averted their divine noses when Cloacina passed, and made ostentatious use of scent-bottle and pocket-handkerchief—Flora, and Pomona, and Ceres would ever admire her virtues, and beseech her benign influence upon the garden, the orchard, and the farm. But the terrestrials never thought that *foex urbis* might be *lux orbis*, and they polluted their rivers, as we ours, with that which should have fertilized their lands. And we blame the Romans very much indeed ;

and we blame everybody else very much indeed ; and we *do hope* the time will soon be here when such a sinful waste will no longer disgrace an enlightened age ; but beyond the contribution of this occasional homily, it is, of course, no affair of ours. Each man assures his neighbor that the process of desiccation is quite easy, and the art of deodorizing almost nice ; but nobody ‘ goes in.’ The reader, I have no doubt, has with me had large experience of this perversity in neighbors, and oftentimes has been perplexed and pained by their dogged strange reluctance to follow the very best advice. There was at Cambridge, some thirty years ago, an insolent, foul-mouthed, pugnacious sweep, who escaped for two terms the sublime licking which he ‘ annexed ’ finally, because no one liked to tackle the soot. There were scores of undergraduates to whom pugilism was a thing of beauty and a joy forever, who had the power and the desire to punish his impudence, but they thought of the close wrestle—they reflected on the ‘ hug,’ and left him. To drop metaphor, there is no more valuable manure ; but it is, from circumstances which require no explanation, more suitable for the farm than the

garden, especially as we have a substitute (farm-yard manure) quite as efficacious, and far more convenient and agreeable in use." *

* "A Book about Roses," S. Reynolds Hole.

CHAPTER VII.

INSECTS AND DISEASES.

* No one can be more profoundly impressed with the curse entailed on Adam and his descendants than the reverent rosarian ; for all that is hostile and bad, animate and inanimate, seem to combine in greater degree to prevent the successful cultivation of the rose than is the case with any other well-known flower.* Few things, for example, can be more effective in their season than a massive bed of pæonies ; they have all the shades of the rose, are more hardy, and know nothing of mildew or the ravages of insect enemies ; but they are almost entirely neglected—very unjustly too—that proper attention may be given to our roses, which need constant care and attention to make their culture profitable. The price to be paid for beautiful roses is eternal vigilance inspired by reverent love. “ He who would have beautiful roses in his garden must have beautiful roses *in his heart*.

He must love them well and always.' A genuine lover of roses is not discouraged by the knowledge of the difficulties that attend the culture of his favorites, the rather is he incited to succeed in spite of all obstacles and drawbacks, knowing that as faint heart never won fair lady, he cannot expect the smiles of Marie Baumann, or Marie Van Houtte, unless he thoroughly cultivate the acquaintance of these beauties, and wait upon them with more attention and deeper concern than would the gallant of the ball-room upon the attendant belles.

The following are the chief foes with which the rose has to contend :

THE APHIS (*Aphis Rosæ*), or Green Fly, is well known by all who have grown roses. It is a small green louse, about one eighth inch in length when fully grown, usually wingless. Their bodies are oval and soft, they secrete a sweet fluid, of which ants are very fond. The presence of ants on roses is good evidence, did we require it, that the Aphis are at work. They are very prolific in breeding ; Réaumur estimates that one individual in five generations may become the progenitor of nearly six thousand millions of de-

scendants. Through their slender beak they suck the juices of the plant, always working at the tender shoots, and in a short time will, if unmolested, destroy the vigor or vitality of any rose they infest. Much the best destructive agent to use against them is tobacco smoke ; when this cannot be applied, a liquid solution, made from tobacco stems or leaves, or from quassia, will be found an efficient method of working their destruction. • Take four cunces of quassia chips, or tobacco stems, and boil them about ten minutes in a gallon of soft water ; strain off the chips, and add four ounces of soft soap, which should be dissolved in it as it cools, stirring well before using. It may be applied by dipping a whisk broom in the mixture and sprinkling all shoots that are infested. Whale-oil soap, dissolved in water, is also a useful remedy. •

MILDEW.—This is a fungous disease often caused by great and sudden atmospheric changes, and by a long continuance of damp, cloudy weather. The best proved remedies are sulphur and soot ; one of these should be applied the moment the disease makes its appearance ; the

plants should be sprinkled with water so that the substance applied will adhere, or else let it be put on early in the morning while the dew is yet on the plants. Some localities are much more subject to visitations of this disease than others, and in such places care should be taken not to plant varieties that are known to be specially liable to mildew. As it is contagious, spreading from one plant to another, we should advise the destruction of such sorts as belong to the Giant of Battles type (see chapter on Typical Roses); better it is to sacrifice a few kinds than that all should be disfigured with this annoying fungus. Generally, mildew makes its appearance in the autumn, when the nights grow cool; at this season it works but little harm and may be disregarded, since the plants have made their growth and the wood is nearly, or quite, ripe.

THE RED SPIDER is a most destructive little insect, which generally commits its ravages in the greenhouse; they only make their appearance when favored by a hot, dry atmosphere. These insects are very small, scarcely distinguishable by the eye, if isolated; they are of a dark, reddish-brown color, found on the under sides of

the leaves. They cause the foliage to assume a yellow tinge, and will soon make sickly the plant they infest. A few applications of whale-oil soap dissolved in warm soft water will often destroy them ; this can be applied with a syringe, taking care to throw the water upward to reach the leaves affected late in the afternoon, and then washed off with pure water the following morning. This insect does not attack plants that are syringed with water daily, and all plants grown under glass, not in flower, should be sprayed regularly. When a house that has been infested with Red Spider can be emptied of the plants, it is well to burn sulphur on charcoal embers ; the fumes from the sulphur are fatal to nearly all insect life, and a house can by this means be soon freed from this insect ; as burning sulphur is also destructive to plant life, this process can only be used in emptied houses, unless only a slight quantity be used at a time.

ROSE HOPPER, OR THRIP (*Tettigonia Rosæ*, of Harris).—This is perhaps the most troublesome pest with which the rose is afflicted in the open air. It is a small, yellowish-white insect, about three-twentieths of an inch long, with transpar-

ent wings. Like the Red Spider, they prey upon the leaves, working on the under side ; they seem to go in swarms and are very destructive to the plant, soon causing the foliage to assume a sickly, yellow appearance. As they jump and fly from one place to another, their destruction is less easy to accomplish than is the case with other enemies. We have found syringing the plants with pure water, so as to wet the lower side of the leaves, and then dusting on powdered white hellebore, will destroy or disperse them. Another remedy, nearly or quite as good, is a solution of whale-oil soap, which must also be applied so as to reach the leaves from beneath.

ROSE CATERPILLAR, OR LEAF-ROLLER.—There are several kinds of caterpillars, belonging to an order called Lepidoptera, which prey upon the rose. They are the young of moths or butterflies, varying from one-half inch to three-quarter inch in length ; some of these are green and yellow, others brown ; they all envelop themselves in the leaves or burrow in the flower buds. Powdered hellebore sprinkled over the plants will prevent in a large measure their mov-

ing over the plants, but the only method of killing them, which is really effectual, is by crushing between finger and thumb. This crushing process may not be considered an agreeable pastime, but it must be done, and fastidious people can either delegate the work to others, or go armed, not *cap à pie*, but with gloved hands, and perform the work themselves.* It is time to look out for these marauders when the buds are formed and begin to show signs of plumpness.

ROSE CHAFER, OR ROSE BUG.—This (the *Melolontha subspinos*a, of Fabricius) is a brown beetle, a little less than one-half inch in length, which comes from the ground about the second week in June, or when the Damask Rose is in blossom. Many localities are never troubled with this pest ; where it does appear, it is never alone, but in swarms ; the insects attack the flowers in preference to the foliage, and seem to be more fond of white and light-colored flowers than of those which are dark. In a very short time they entirely disfigure and greatly injure the plant which they attack ; an application of Paris green dusted over the plants is very destructive to them, but being so dangerous a poison, we

recommend hand-picking and burning of the bugs in preference. The application of tobacco-water, whale-oil soap, etc., is useless, for in order to have any effect upon the bugs the solution would have to be made so strong that it would work injury to the plants.

ROSE SLUG.—These slugs are the larva of a saw-fly, called by Harris *Telandria Rosæ*, an insect about the size of a common house-fly, which comes out of the ground during May and June. The female flies puncture the leaves in different places, depositing their eggs in each incision made ; these eggs hatch in twelve or fifteen days after that they are laid. The slugs at once commence to eat the leaves, and soon make great inroads upon the foliage, if not checked. They are about one-half inch long when fully grown, of a green color, and feed upon the upper portion of the foliage. The best remedies are powdered white hellebore, or a solution of whale-oil soap.

WHITE GRUB.—These grubs are the young of those buzzing, sticky abominations known as May-bugs. The beetles are thus described by Harris : “ During the month of May, they come

forth from the ground, whence they have received the name of May-bugs or May-beetles. They pass the greater part of the day upon trees, clinging to the under sides of the leaves in a state of repose. As soon as evening approaches, they begin to buzz about among the branches, and continue on the wing till toward midnight. In their droning flight they move very irregularly, darting hither and thither with an uncertain aim, hitting against objects in their way with a force that often causes them to fall to the ground. They frequently enter houses in the night, apparently attracted as well as dazzled and bewildered by the lights. Their vagaries, in which, without having the power to harm, they seem to threaten an attack, have caused them to be called dors, that is, darers ; while their seeming blindness and stupidity have become proverbial in the expressions ‘ blind as a beetle’ and ‘ beetle-headed.’ After the sexes have paired the males perish, and the females enter the earth to the depth of six inches or more, making their way by means of the strong teeth which arm the forelegs ; here they deposit their eggs. . . . From the eggs are hatched, in the space of fourteen days, little

whitish grubs, each provided with six legs near the head, and a mouth furnished with strong jaws. When in a state of rest, these grubs usually curl themselves in the shape of a crescent." These annoying pests live in the earth for three years, feeding on the roots of roses and other plants, and give no sign of their presence till the plant on which they feed commences to wither or turn sickly. * So soon as evidence is given of their ravages, the plant should at once be dug around and search made for the grub, that his destruction may save other plants from death.* The grub is more fond of the roots of strawberries than of any other food, and if these berries are grown alongside of roses a careful lookout must be had. It is a fortunate thing that the grub does not confine himself to a rose-diet, else would the culture of our favorite flower often be conducted with more plague than pleasure or profit.

There are other insect enemies of the rose besides those we have named, but they seldom do any great damage, and we think our readers are ready to cry, enough of bugs. We have given a list of remedies for controlling the ravages of

the various pests which worry the rose, but it is with our roses as with ourselves, prevention is always better than cure. A pure atmosphere, cleanliness, by the free use of water, etc., healthy food, not necessarily that which is most nutritious, but that which can with certainty be assimilated or digested, are requirements common to our own lives and those of our roses, if they are to be healthy ones. A watchful care, with systematic attention to watering, syringing, etc., will often keep away insect enemies that would otherwise surely come to torment us. Many gardens in the suburbs of cities are supplied with water conducted from the mains of the water works in pipes ; those who have such a supply of water in their grounds will find it an easy matter frequently to spray all the plants both from beneath and above. The frequent and vigorous application of water is as hateful to the insects described as it is to fighting cats, and every one who grows roses (or cats) should be provided with that most useful instrument the garden syringe ; it is a most valuable weapon of defence or of offence, whether used in keeping off the Rose Hopper or in dispersing

the caterwauling midnight marauders that may come within range.

There are some insects which entomologists claim to be useful, as destroying those which are noxious ; such are the larvæ of the Garden Beetle, Rose Beetle, Ladybird and others, which feed upon Aphis and caterpillars. I know nothing of the truth of this from personal observation, and do not see how their aid can be considered of any great value, since the solutions, etc., which are necessary to apply when noxious insects make their appearance, would be pretty certain to destroy friend and foe alike. I have much more confidence in the help to be obtained from the despised toad, and some of the birds, especially the ground-bird and sparrow ; the toad will devour many of the worms and caterpillars, the birds will destroy not only these, but also the insects which infest the plants. The aid of the birds might be enlisted by daily scattering a few crumbs among the plants ; when they have consumed the crumbs they will naturally turn their attention to the insects at hand, and thus repay their benefactors.

CHAPTER VIII.

PROPAGATION.

THERE are four methods used in propagating roses—by cuttings, by budding, by grafting, by layering ; in importance they rank in the order named, and in this order we will briefly consider them.

Although the principles which govern the art of propagation are the same the world over, it will be found that rosarians differ widely in working out details ; thus, in the production of roses from cuttings, we, in America, are as much more successful than our European brethren as they excel us in the production of budded and grafted plants.

By CUTTINGS.—There is no doubt but that plants grown from cuttings are the most useful for general purposes, and the greater number of our choice varieties can be grown in this way without difficulty ; but there are some beautiful kinds, like Baroness Rothschild, which root with

great difficulty ; these sorts can only be profitably grown by budding or grafting. Cuttings can be made at any time of the year. The old ideas that the wood *must* be cut at a joint or with a heel, and that it is *essential* they should be placed in bottom heat, have been thoroughly exploded. The most successful propagation by cuttings, for the largest number of kinds, is made during the late winter months from strong plants one or two years old that have been grown in open ground, potted in the month of November; or from plants which have been grown in pots for one year, or planted out under glass. Cuttings of all kinds which root freely, like General Jacqueminot, Victor Verdier, etc., can be made from one eye only, and cut between the joints just as well as after the old fashion of cutting to a heel, and with three or more eyes—an unnecessary and wasteful process. All of the large commercial establishments in this country do most of their rose propagation in the months of January, February, and March ; the cuttings are made to one eye and dibbled in beds of sand, or in some cases are placed in pots of sand and these pots plunged in beds of sand ; underneath the staging

which supports the cuttings run hot-water pipes or flues ; these are commonly boarded-in to secure bottom heat, and this I believe to be the best method. Some rose-growers make no attempt at confining the pipes or flues, and produce excellent plants without resorting to bottom heat, but it is a slower process, and there is a somewhat great percentage of cuttings which fail to root. Advocates of this system claim that they secure healthier, stronger plants in the end than they would by the use of bottom heat. There is no doubt that plants propagated in a closely confined house in a high temperature are apt to turn out of weak constitution, but we believe the best results follow where plants are propagated in a bed at a temperature of about 70 degrees, with the temperature of the house a few degrees less. However, these matters concern nurserymen and florists more than amateurs, for this class does not care to put in operation anything that requires much expense. When but few cuttings are desired they can be placed in pots and will take root in four or five weeks after insertion, grown in any ordinary conservatory or greenhouse. After the cuttings have taken root

they should be potted in pots not exceeding two and a half inches in diameter. Certain kinds of roses take root without difficulty, others are so stubborn that the amateur would do well not to attempt their propagation until he has proved himself an adept in growing the others. The sorts most difficult to root are the various varieties of Moss, most of the summer roses, and certain varieties of Hybrid Remontants belonging to the Jules Margottin, Baronne Prevost, and Baroness Rothschild families. (See chapter on Typical Roses.) All of the Tea and Monthly Roses, with very few exceptions, root and grow freely from cuttings.

Besides using green wood, some propagators make cuttings from hard wood—that is, shoots thoroughly ripened, taken in the autumn. Manetti cuttings are always made from wood taken in autumn, and the various varieties of Prairie Roses are often grown in this way. In some establishments large quantities of cuttings are made during the summer months and grown in hotbeds; the plants produced are salable in the autumn and are largely used by florists. In selecting stock plants from which to propagate,

care should be had that only those be chosen which are vigorous and healthy, otherwise a sickly or weak progeny will result.

BY BUDDING.—This is an important method, second only to propagation by cuttings.

The chief disadvantages are these : first, it is more expensive. The stocks are to be purchased and cared for (they cannot often be profitably grown in our hot climate), and it will be found that the labor of budding, suckering, cutting back stocks, etc., will make the operation far more costly than growing plants from cuttings. Budded plants are not desirable for inexperienced amateurs, since novices do not detect the suckers which, not infrequently, come up from the roots and if not cut away ultimately choke the plant. A third objection is found in the fact that budded plants are more frequently killed by severe winters than plants on own roots.

On the other hand, by budding we are enabled to grow varieties which are so difficult to root from cuttings, that their propagation would be discontinued by all large rose-growers were it not for this method. Varieties like Baroness Rothschild, Mabel Morrison, Marquise de Castellane, Madame

Boll, Marguerite de St. Amande, etc., are as yet almost indispensable, but no nurseryman would long grow them from cuttings. There is another class of roses often advantageously grown by budding, these are varieties of moderate growth like A. K. Williams, Horace Vernet, Madame Victor Verdier, Mademoiselle Eugénie Verdier, Marie Baumann, Xavier Olibo, etc. All these kinds are invigorated by being worked on some strong stock, like the Manetti. A third advantage of budded roses is for use as stock plants, and also for forcing. Budded plants of many kinds (not the Jacqueminot type) can be taken up in October or November, and with ordinary treatment will give as fine a crop of flowers as plants of the same varieties which have been grown all summer in pots at much more expense and labor.

I would not advise any reader to purchase budded roses who cannot tell, by the wood, the difference between Persian Yellow and General Jacqueminot, between Marie Baumann and Salet—indeed amateurs who cannot do this do not deserve to have roses at all, for they would not be able to distinguish between the shoots of the Manetti suckers and their Louis Van Houtte or

Victor Verdier (although the Manetti is most distinct from all other roses).

Many kinds of stocks have been tried on which to bud roses, as the Brier, the Grifferaie, etc., but for general use in this country we very greatly prefer the Manetti. The stocks are planted in nursery rows about three feet between the rows, and six or eight inches apart ; in July and August the buds are inserted ; the lower the buds can be put in the better, as the liability to send up suckers is thereby greatly diminished, and opportunity is also afforded the plant of being ultimately established on its own roots.

PROPAGATION BY GRAFTING.—This is a profitable mode to pursue when done in winter under glass, using plants of Manetti or Brier grown in pots for the purpose. Grafting roses on the root cannot be made profitable, as such a large percentage fail to grow. Stock grafting is carried on in England and elsewhere with great success, and although the plants are not so desirable (owing to the graft being of necessity some distance above the roots) as those propagated by the other methods, it affords nurserymen an opportunity of more quickly securing a stock of

new sorts, and also is advantageous as an aid in producing more vigorous plants of such varieties as Niphetos, than can possibly be obtained from cuttings.

PROPAGATION BY LAYERING was once practised to considerable extent, but it is a slow method, and is now but little used. Good plants can be obtained in this way of Persian Yellow and some other varieties which do not strike from cuttings, and it is the only method by which certain kinds can be produced on their own roots.

Besides the methods spoken of, roses are also produced from seed, but this is only done where it is purposed to secure stocks, as seedling Briers, or where it is the aim to obtain new varieties.

CHAPTER IX.

EXHIBITING ROSES.

UNTIL recently little attention has, in this country, been given to a careful exhibition of roses, but of late years a decided interest has been taken in the matter, and very creditable displays are now made in Boston and New York. The Massachusetts Horticultural Society has done a great deal to encourage exhibits of cut-roses, and the numerous boxes of splendid flowers to be seen at Boston every June attract admirers from all parts of the land. Much has been written and said for and against the exhibition of cut-roses in boxes. Objectors to the system claim that wrong impressions are given to the public ; amateurs see beautiful flowers of a certain variety, and are thereby led to purchase and attempt to grow plants of it, only to discover that they don't grow ; the variety being of feeble constitution and requiring skilful treatment, lives but a dismal life at their hands, and it is finally

discarded as worthless ; or it may be, the sort in question proves to be a kind that gives a few good blooms in June and plenty of shoots and leaves the rest of the year, but nothing else. Wrong impressions are doubtless often received at these exhibits, for to gain by observation a correct impression of the *general* qualities of any variety it must be seen at different times, growing in the garden or nursery row in quantity. On the other hand, these exhibitions certainly make prominent the more beautiful roses, and as we are first attracted to a rose by the richness or delicacy of its color, and the symmetry of its form, we have placed before us for easy comparison the highest types of beauty to be found in the rose family ; and although from seeing individual flowers we learn nothing of the character of varieties, as respects profusion and continuity of bloom, or vigor and healthfulness of growth, we, nevertheless, can be assured that those kinds which appear *frequently* and in great perfection in different boxes are kinds which will certainly be useful ones for general cultivation. Varieties, particularly those not of recent origin, which now and then sparsely appear in

great beauty, are not to be trusted on prima-facie evidence. The warning, "trust her not, she's fooling thee," should be borne in mind in the examination of the beauties of these erratic stars, and no one should commit himself in allegiance to them without some knowledge of their actual worth.

The following rule of the Massachusetts Horticultural Society referring to boxes for exhibition is given for the information of those interested in the matter. All roses competing for prizes, except those for the general display, must be exhibited in boxes of the dimensions named below :

Length.	Breadth.	Height.
For 24 roses, 4 ft.	1 ft. 6 in.	Back of box, 6 in. ; front, 4 in.
" 12 roses, 2 ft. 2 in.	1 ft. 6 in.	" 6 in. ; " 4 in.
" 6 roses, 1 ft. 6 in.	1 ft. 6 in.	" 6 in. ; " 4 in.
" 3 roses, 1 ft.	1 ft. 6 in.	" 6 in. ; " 4 in.

Two of the most important points connected with showing roses are the proper arrangement as regards size and colors of the flowers.

" Cut first of all your grandest blooms, because no Mede nor Persian ever made law more unalterable than this : *The largest roses must be placed at the back, the smallest in the front, and*

the intermediate in the middle of your boxes. They become by this arrangement so gradually, beautifully less, that the disparity of size is imperceptible. Transgress this rule, and the result will be disastrous, ludicrous, as when some huge London carriage-horse is put in harness with the paternal cob, or as when some small but ambitious dancer runs round and round the tallest girl at the ball in the gyrations of the mazy waltz. . . . The arrangement of roses with regard to their color has not been studied as it deserves to be. The amateur with more leisure than the man of business for the study of the beautiful, and for the most effective display of his fewer flowers, ought to excel, but, as a rule, does not. His roses are very rarely made the most of in this respect, but are frequently marred and spoiled, the colors clashing and contending with each other instead of combining against their common adversary. It is told of a highly sensitive dame whose silly pride was in dress, that she went into hysterics before a large party when her great rival in millinery came and sat upon the ottoman beside her in a grand garment of the same color as her own, but of a much more brilliant and

effective dye ; and I have seen many a rose which would weep, if it could, aromatic rose-water, subdued by a like despair. Once upon a time six pretty sisters lived at home together always. In looks, in figure, in voice, gait, and apparel, they exactly resembled each other. Young gentlemen seeing them apart, fell madly in love, as young gentlemen ought to do ; but on going to the house and being introduced to the family they were bewildered by the exact similitude, didn't know which they had come to see, couldn't think of proposing at random, made blunders, apologies, retreats. It seemed as though all these charming flowers would be left to wither on the virgin thorn, when one of them was permitted to leave her home upon a visit to a distant friend. She returned in six weeks *bien fiancée*, and six months after was a bride. The rest followed her example. So it is that six scarlet roses or six pink roses in close proximity perplex the spectator, and depreciate each other by their monotonous identity ; isolated or contrasted we admire them heartily." *

Roses should be cut and placed in their proper

* "A Book about Roses," Chapter XIV., S. Reynolds Hole.

positions for exhibition in the same boxes in which they are to be shown previous to the time appointed for exhibition. Some favored individuals who live close by the place where the show is held find it practicable to bring the flowers in baskets or trays, and arrange them in their proper positions in the room where they are to be displayed two or three hours before the time appointed for the judges to go their round. Where roses come from any distance they should be carefully arranged at home, and then when the boxes arrive at destination any flowers that suffered in transit can be replaced from the supply put up for this purpose. The day being cloudy and cool, roses may be cut at any time, but it is prudent to rely on the early morning hours as the best time for the purpose. An experience in cutting roses at sunrise, on a fresh cool morning in June, is an experience worth living for. A careful examination of one's treasures the day before the flowers are to be cut will enable one to estimate the strength on hand and decide finally as to what classes shall be contended for. All the details should be considered in advance, and the writing of cards, giving names of

varieties, providing green moss, etc., not left till the last moment. Amateurs who do not comprehend the manner of construction of exhibition boxes and the way the flowers are to be arranged in them, would do well to apply to the Secretary of the Massachusetts Horticultural Society, Horticultural Hall, Boston, who will have sent to them a box from which they can pattern, or all the boxes required will be sent ; he will also furnish the schedule of prizes offered by the society. I mention this society because its exhibits are of higher character than any others, both as regards the quality of the flowers displayed and the general arrangements and facilities afforded. Boston excels in the exhibit of Hybrid Remontants, while New York stands first in staging fine Teas, but at both places displays are made that should have the encouragement of all who are interested in the improvement of our rose exhibitions.

CHAPTER X.

ROSES UNDER GLASS. BY J. N. MAY.

THERE are a number of roses which do not attain perfection when grown in open air, and others that do not thrive at all except under glass. For these it is necessary to provide a rose-house, which, besides enabling us to grow satisfactorily the delicate kinds, will supply us with flowers during the winter months of any more robust sorts we choose to grow. If it is desired to grow more than one family of roses, two or more houses are desirable, so that they can be treated to suit their several requirements. Tea Roses need one treatment, Hybrid Perpetuals and nearly all hardy roses require another somewhat different. I will first give the treatment requisite for insuring the best results with Tea Roses, commencing with their propagation.

CUTTINGS.—Use young, vigorous wood taken from healthy plants ; the wood is in the right condition when the flower buds are well devel-

oped. Take cuttings with two or three leaf stalks, remove the lower one and make a *smooth* cut, if possible just beneath where the leaf stalk was removed ; with the back of the knife knock off all thorns from the wood and insert the cutting in your bed of sand ; press around the cutting firmly, and water thoroughly with tepid water. After this process the cuttings should never be allowed to get dry, the sand must be kept moist by frequent syringing. If the temperature of the house is kept at from fifty to fifty-five degrees at night and from sixty to seventy during the day, the cuttings will be well rooted in twenty-eight or thirty days after the day they are put in.

To know when they are in the right condition to pot off : with a thin, flat stick, carefully pry a few out of the sand ; if they have made roots one-half inch long, they can be potted. The soil must be prepared by taking three parts good loam, one part sand, one part well-rotted cow-manure ; these are to be thoroughly mixed and placed in a *warm* position. Use two-and-a-half-inch pots, press about the cuttings firmly ; when potted place near the glass. Do not water

heavily for a few days ; until they begin to grow freely a light syringing, just enough to keep the plants from becoming dry, is all that is necessary.

In about three weeks, the plants, if properly treated, will be ready to shift into four or five-inch pots. The same care used in the first potting must be observed in this. By watering the plants an hour or so before shifting, they will leave the pot with a ball of earth, and thus but slight check or disturbance is given to the growth of the plants. The pots should always be filled to the amount of one-fourth or one-fifth their depth with broken pieces of pots, or similar substances, in order to secure perfect drainage. After four or five weeks' growth the plants should be ready for the second shift, when six or seven-inch pots will be needed. The same soil should be used, but with the addition of one shovelful of pure ground bone to every forty shovels of soil ; this must be well mixed. In shifting plants always use clean pots.

The best time to make cuttings is during the month of January ; if you cannot obtain good cuttings of your own, order young plants from some good grower, to be delivered to you some

time in February or March. These plants will probably be from two-and-a-half-inch pots and will be ready for their first shift. Do not order the plants sent by mail, for under no circumstances will plants by mail ever be as good as those sent by express ; for the reason that the soil is shaken off the roots when prepared for mailing, and the roots get damaged in transit. I would rather pay double the price for every plant I wanted and have them come by express than have them mailed at one-half the price.

After that the sun causes the temperature of the house to rise during the day ; as during mild, clear days in February, March, and April, careful attention must be paid to ventilation ; air is to be given from the ridge, never from the front, until after the first of June, or the plants will suffer from mildew, etc. The Aphis must be kept off by tobacco fumigation ; never allow the plants to become in the least infested. Prevent mildew by dusting flower of sulphur on the pipes or flues, which should previously be moistened with water.

The plants will be ready for removal from the houses to open air about the first of June. The position chosen for plunging the roses must not

be one exposed to sweeping winds or strong draughts of air. The pots may be plunged in a bed of coal-ashes, or any similar material, about four inches in depth. The plants should be syringed once a day to keep them healthy ; if the surface of the soil becomes green carefully remove it and fill up with fresh soil. When the pots are filled with roots we give the final shift for the season, using eight, nine, or ten-inch pots according to the size and strength of the plant. If it is desired to grow the plants on benches, out of pots, this last shift is not used. For this purpose the side benches should not exceed three feet six inches in width, and next the front should be twelve or fourteen inches from the glass. The benches must be so made as to hold five or six inches of soil, and the bottom boards laid one-half inch apart, so as to secure good drainage ; over the cracks are placed thin sods, the grass side downward ; these prevent the soil from being washed away by watering. The first bench being nearer the glass than the others should be used for the more delicate growing kinds, like *Niphetos*, etc. If the house be not pitched too high, the middle bench can be made level, like

the front one, using the back portion for the taller growing sorts. The third bench, if there be one, must be raised so as to bring the plants about the same distance from the glass as does the first one. The plants should be placed about sixteen or eighteen inches apart, each way, and should be in position in June or July. When well established and growing freely, give them a mulching of good rotten manure mixed with bone-dust; one shovel bone-dust to twenty of manure is a good proportion. The amount of water to be given will vary with the weather; during clear and hot days they should have a vigorous spraying, given by a syringe or from the hose, twice a day. When it is cloudy or cool they may need but a slight sprinkling once a day. The soil should never be allowed to become dry so as to show dust, or to be saturated with water; either extreme is dangerous to the health of the plants. From the time of planting out, say the last of June, until the middle of September, or until the nights become chilly, all the ventilators should be constantly left wide open; when cool weather begins they must be closed at night, but air should always be given from the

ridge during the day, unless the weather be adverse. It should be the endeavor to keep the temperature fifty-five degrees at night, and sixty-five to eighty degrees during the day. If these instructions are carefully heeded, there will be an abundant supply of fine roses all through the season, from the first of October to the end of the following June, when the same process will be repeated. Although the old plants can be used for a second season, I do not advocate it; the extra expense and trouble of renewing the beds of soil and the plants every season, I have proved by experience is more than compensated for by the better and more constant supply of fine blooms.

If it is decided to grow the plants in pots all the season a somewhat different treatment is to be followed. After the final shift the plants are again placed on the bed of ashes, where they are constantly to be watched and cared for, the dead leaves picked off and the surface of the soil occasionally stirred, care being taken not to disturb the young roots. During hot weather it is best to water in the evening, but when the nights become cool the morning is a better time. By the

middle of August we slightly withhold watering, so that the plants may obtain a hardy constitution and a partial rest of a few weeks. The greenhouses should be thoroughly cleaned, ready to receive the plants by the middle of September. After the plants are housed they should be mulched with thoroughly rotted cow-manure, fifteen parts, mixed with one part pure ground bone. As much is to be placed on each pot as will remain and not wash off. The soil is to be examined to see that it does not get too wet. In ten or fifteen days after the plants are placed in the house they will begin to show plenty of blooms, and will continue to push forth buds all the winter. By the first of December, if the plants are doing well, they should have a little weak liquid manure. Place one-half bushel of fresh cow-manure in a barrel containing fifty gallons of water ; stir it thoroughly and let it stand two days before using. The plants may be allowed to become a little dry before the liquid is applied ; it can be used once a week. Chicken manure is also excellent, applied in the same way, but as it is stronger, about twice the amount of water should be used. When neither

of these fertilizers can be had, Peruvian guano, two pounds to fifty gallons of water, may be substituted. A peck of soot tied in a coarse bag and allowed to stand in water for several hours, is also a useful stimulant. To destroy worms and keep the soil sweet a dose of lime-water may occasionally be given with excellent results. One peck of fresh lime is placed in a barrel, and enough water added to slaken it, the same as a mason would do in making mortar. When the lime has been slaked, add fifty gallons of water and then let it stand until clear.

The mulching about the plants may be renewed during the winter, and toward spring the liquid manure can be given more frequently than at the first. At the end of the season, say the first week in June, the plants should be removed from the greenhouse to the plunging ground ; it is desirable now to plunge the pots up to the rim, as this keeps the plants somewhat moist, and much less water is required. The supply of water should be gradually lessened, that the growth may be checked and the plants obtain a few weeks' rest ; in doing this, care must be had that the young wood does not shrivel. After a

rest of about five weeks, the plants are to be shifted into pots one or two sizes larger. By the middle of August it will be time to cut away all weak wood, reserving the young and strong shoots ; these should be tied to neat stakes. As the plants show signs of forming new growth, a little more water must be given ; they should be housed by the middle of September and treated the same way as the previous year.

Hybrid Perpetual Roses must be managed differently from the Teas. They are propagated and grown on in the same way until the first of September, when they should be sorted out, and all those having the strongest and ripest wood placed by themselves. Water is to be gradually withheld until growth stops, this will be in two or three weeks ; the pots are then to be laid on their sides, on a bed of coal-ashes ; if the weather is hot and dry cover the pots with rough grass, hay, or any light material ; in this condition they can, if desired, remain several weeks, provided they are not allowed to get hard frozen.

Presuming that the blooms are required for New Year's, the plants should be thoroughly ripened by the 25th of September, and must be

pruned about that time ; in doing this remove entirely all weak shoots and shorten the strong ones to within a few buds of the base, cutting back to a plump eye. Stand the pots up and water them a little at a time till the balls are soaked through ; on warm days, syringe the tops frequently. Should the nights get frosty place the plants in a pit or cold frame, covering with sashes. If no such place be ready the plants must be removed to the greenhouse ; in any event they will need to go there when the eyes have well started. Be sure to give plenty of air on all mild days, and syringe two or three times a day, according to the heat of the sun. Do not allow the temperature to exceed forty degrees at night for the first three weeks ; after that it can be gradually increased to forty-five degrees. In early November, special care must be taken not to overwater, at the same time the plants must never be allowed to get dry from the time the plants start into growth until the blooms are cut. The temperature will be kept at forty-five degrees for the night, or a very little above that point, until the flower buds form ; so soon as the buds are well developed the night temperature

can be gradually increased to fifty-five degrees. So soon as it is seen that the flower buds are forming, liquid manure may be given, as directed for Tea Roses.

If the flowers are wanted any earlier than January the plants must be ripened correspondingly early. It generally takes fourteen weeks from the time of starting to bring Hybrid Perpetual Roses into bloom. The location, soil, etc., all exert influences in this matter, and the operator must adapt himself to the circumstances of the case. Certainly there is no royal road to success in forcing roses ; it is only by hard work, patient and careful watching, night and day, that success can be obtained. When the crop of flowers is cut the plants can be treated about the same as the Teas, excepting they will not need quite so much water for a few weeks until they begin to grow freely again ; then encouragement should be given them, for the finer the growth now the better will be the produce the next season. At the beginning of June they can be taken out of doors and receive the same treatment as young plants.

Varieties suitable for forcing are numerous

(see Chapter XI. for list of varieties), perhaps the best dark ones for very early work are General Jacqueminot and Fisher Holmes. Varieties of Tea Roses suitable for forcing are almost innumerable, and every grower has his favorites ; among the newer sorts some of the Hybrid Teas will certainly rank among the first.

For this chapter readers are indebted to Mr. J. N. May, of Summit, N. J., a practical cultivator, one of the most successful rosarians who grow flowers for the New York market. Roses under glass are nowhere brought to such perfection as in the neighborhood of Summit and Madison, New Jersey. In the English rose exhibitions are yet to be seen the finest specimens of hardy roses, but to see the most beautiful blooms of Tea Roses that the world produces we must go to Jersey ; this chapter, from one of the adepts, will therefore be of great practical value to all who are interested in growing roses through the winter months.

CHAPTER XI.

VARIETIES BEST ADAPTED FOR SPECIAL PURPOSES.

The kinds marked with an asterisk () should be first chosen.*

FOR PEGGING-DOWN AND BEDDING.—For this purpose monthly roses are the best, and in selecting suitable varieties, several necessary qualities must be considered. When we plant roses in isolated positions we often do so having regard to some special features which, by themselves, would not make the varieties of value for massing together. Thus, neither Maréchal Niel nor Niphetos are desirable kinds, though they are the finest roses of their color. The requisites for a good bedding rose are, freedom of bloom, healthy habit of growth, and pure, steadfast color. Symmetry of form, fragrance, and fullness of flower should also be taken into consideration.

We commend the following :

*Agrippina, *Appolline, Edward Desfosses, *George Peabody, *Hermosa, Queen of Bourbons, *Malmaison, Madame Caroline Kuster, Pumila, Bougere, Catherine Mermet, Countess Riza du Parc, General Tartas, *Gerard Desbois, *Homer, Jean Pernet, *La Princesse Vera, Madame de Vatry, *Madame Lambard, Marie Ducher, Marie Guillot, *Marie Van Houtte, *Monsieur Furtado, *Perle des Jardins, Rubens, *Sombreuil, Souvenir d'un Ami, Triomphe de Luxembourg, *La France, Michael Saunders, Paquerette, Soupert-et-Notting (Moss), Coquette des Alpes, *Eliza Boelle, Madame Auguste Perrin.

The Hybrid Remontants are not quite so useful for bedding roses as those above named, since they are not continuously in bloom, but they are very beautiful massed together and are capable of producing great effects. All of these are desirable :

Abel Grand, *Alfred Colomb, Anne de Diesbach, Annie Wood, Baronne Prévost, Baroness Rothschild, Boieldieu, *Countess of Serenye, Charles Lefebvre, Charles Margottin, Countess of Oxford, *Eugène Verdier, *Fisher Holmes,

*François Michelon, Gabriel Tournier, General Jacqueminot, Hippolyte Jamain, *John Hopper, La Reine, La Rosière, Louis Van Houtte, Mabel Morrison, Madame Charles Wood, Madame V. Verdier, *Marguerite de St. Amande, *Marie Baumann, Paul Neyron, Pierre Notting, *Rev. J. B. Camm, Victor Verdier.

FOR FORCING.—We need for this purpose varieties that will flower freely and that are of high finish ; only the most beautiful should be grown.

Among Monthly Roses the most desirable are : *Agrippina, Douglass, Souvenir de la Malmaison, Cloth of Gold, Maréchal Niel, Marie Ber- ton, Bon Silène, *Catherine Mermet (not very free, but most beautiful), *Cornelia Cook (same attributes as Mermet), Homer, Innocente Pirola, *Isabella Sprunt, Jean Pernet, *Madame Bravy, *Madame de Vatry, Madame Lambard, *Marie Guillot, *Marie Van Houtte, Monsieur Furtado, Niphetos, Odorata, *Perle des Jardins, *Rubens, Safrano, Souvenir d'un Ami, Triomphe de Lux- embourg, Beauty of Stapleford, Captain Christy, Duke of Connaught, La France, Madame A. Bernaix, Mademoiselle B. Violet, Nancy

Lee, Viscountess Falmouth, Soupert-et-Notting (Moss), *Eliza Boelle, Madame Noman.

Among Hybrid Remontants choose from Abel Carrière, *A. Colomb, Anne de Diesbach, *Baroness Rothschild, Charles Lefebvre, Countess Cecile, *Countess of Serenye, Countess of Oxford, Etienne Levet, *Eugénie Verdier, *Fisher Holmes, François Michelin, General Jacqueminot, H. Jamain, Jean Liabaud, *John Hopper, Louis Van Houtte, Mabel Morrison, La Rosière, *Marguerite de St. Amande, Marie Baumann, Paul Neyron, Pierre Notting, *Rev. J. B. Camm, V. Verdier.

CLIMBING ROSES FOR CONSERVATORY.—Aimée Vibert Scandens, Banksia White, Banksia Yellow, *Celine Forrestier, Clair Carnot, Cloth of Gold, *Lamarque, Maréchal Niel, *Solfaterre, Belle Lyonnaise, *Gloire de Dijon, Madame Bérard, *Marie Berton, Reine Marie Henriette.

HARDY ROSES, THAT ARE FREE AUTUMNAL SORTS.—Gloire de Dijon, *La France, Viscountess Falmouth, Salet, Soupert-et-Notting. All the Hybrid Noisettes, Abel Grand, *Alfred Colomb, Antoine Verdier, Annie Wood, Baronne Prévost,

*Baroness Rothschild, *Boieldieu, Caroline de Sansal, *Countess of Serenye, Etienne Levet, Eugénie Verdier, *François Michelin, Gabriel Tournier, General Washington, Hippolyte Jamain, Horace Vernet, John Hopper, Jules Margottin, La Reine, Louis Van Houtte, Mabel Morrison, Madame Charles Wood, *Marguerite de St. Amande, Marie Baumann, Monsieur Norman, Paul Neyron, Princess Charlotte, *Rev. J. B. Camm, Victor Verdier. These are not all perfectly hardy ; for list of such kinds see below.

HIGHLY SCENTED ROSES.—With but few exceptions all Moss Roses. Blanchefleur, Centifolia, Madame Hardy, *Maréchal Niel, Aline Sisley, *Bon Silène, Catherine Mermet, Countess Riza du Parc, *Devoniensis, Jules Finger, *Madame Bravy, Madame F. Janin, Marie Van Houtte, *Odorata, Rubens, Souvenir d'un Ami, *Duchess of Connaught, Hon. George Bancroft, *La France, *Nancy Lee, *Viscountess Falmouth, *Soupert-et-Notting, *Alfred Colomb, Baronne Prévost, Bessie Johnson, Fisher Holmes, General Jacqueminot, Horace Vernet, Louis Van Houtte, Mme. Chirard, *Madame Victor Verdier, Marie Baumann, Marie Rady, Maurice Bernardin,

Pierre Notting, Prince de Porcia, Queen of Waltham, *Rev. J. B. Camm, Xavier Olibo.

THE MOST HARDY ROSES.—Abel Grand, Anne de Diesbach, Baron de Bonstetten, *Baronne Prévost, Baroness Rothschild, Boieldieu, Caroline de Sansal, Charles Margottin, Countess of Serenye, Edward Morren, François Michelon, General Jacqueminot, Jules Margottin, *La Reine, Mabel Morrison, Madame Boll, Madame Joly, Marchioness of Exeter, Marguerite de St. Amande, Marquise de Castellane, Maurice Bernardin, Rev. J. B. Camm. All summer roses, with scarce any exception, are hardy, more so than any of the Hybrid Remontants. The most hardy of the Monthly Roses are Appolline, Edward Désfosses, Hermosa, Louise Odier, Aimée Vibert, Caroline Marniesse, Gloire de Dijon, Reine Marie Henriette, Bougère, Gérard Desbois, Homer, Madame de Vatry, Marie Ducher, Sombreuil.

THE MOST BEAUTIFUL ROSES, OR THOSE SUITED FOR EXHIBITION.—Souvenir de la Malmaison, Cloth of Gold, *Maréchal Niel, Madame Bérard, *Marie Berton, *Catherine Mermet, *Cornelia Cook, *Homer, *Madame Bravy, *Marie Guillot,

Marie Van Houtte, Monsieur Furtado, Niphetos, Perle des Jardins, *Rubens, Souvenir d'un Ami, *Captain Christy, *La France, Madame Alexander Bernaix, Princess Louise Victoria, *Eliza Boelle, *Madame Noman, A. Geoffroy St. Hilaire, Abel Carrière, *A. Colomb, A. K. Williams, Baron de Bonstetten, *Baroness Rothschild, *Charles Lefebvre, Charles Margottin, Countess Cecile, Countess of Serenye, Edward Morren, Egeria, *Eugénie Verdier, *E. Y. Teas, Fisher Holmes, François Michelin, George Prince, *Horace Vernet, *Jean Liabaud, John Hopper, Jules Margottin, La Rosière, *Louis Van Houtte, Mabel Morrison, *Madame Victor Verdier, Marguerite de St. Amande, *Marie Baumann, *Marie Rady, Marquise de Castellane, Maurice Bernardin, Monsieur Noman, Paul Neyron, *Pierre Notting, *Rev. J. B. Camm, Victor Verdier, *Xavier Olibo.

CHAPTER XII.

RAISERS OF THE BEST ROSES.

WITH the immense number of varieties produced and sent out each year, it would be well if we had some criterion which would enable us to select the probably meritorious sorts from the mass of kinds which are worthless. We have, as yet, no better guide than the reputation of the raisers ; by comparing the best sorts of the different growers we can estimate with some exactness the value each grower has been to the world ; judging from what we have received in the past, we can estimate, in a measure, the value of that proffered annually by the different raisers of new roses.

The best sorts of each raiser are given in the accompanying list, and are those kinds most generally grown the world over.

* These raisers are dead, or have retired from business, or are not likely to be heard from again.

The abbreviations used describing the classes are : A.—Austrian ; B.—Bourbon ; Beng.—Bengal ; Cl. T.—Climbing Tea ; D.—Damask ; Hy. Cl.—Hybrid Climber ; Hy. N.—Hybrid Noisette ; H. R.—Hybrid Remontant ; H. T.—Hybrid Tea ; M.—Moss ; N.—Noisette ; P.—Prairie ; P. M.—Perpetual Moss ; Pol.—Polyantha ; Prov.—Provence ; T.—Tea.

* *Baumann.* France.

Marie Baumann.....H.R. 1863

* *Jean Béluzé.* Lyons, France.

His first variety was sent out in 1840.

John Hopper.....H.R. 1862

The standing of the various rosarians, now in business, who have sent out two or more sorts of good repute, is here placed in order of merit.

1. Lacharme. Victor Verdier, Alfred Colomb, Coquette des Alpes, Charles Lefebvre, are varieties of marked individuality, produced by him. He has sent out fewer poor or indifferent sorts than any other large grower. He raises few Teas.

2. Guillot-fils. In La France and Catherine Mermet, he has given us new types of wondrous beauty. Horace Vernet, Eugénie

Verdier, and Marie Guillot, are sorts scarcely less fine. He furnishes about equal numbers of Tea and Hybrid Remontants.

3. E. Verdier. Has sent out no Teas except Maréchal Niel, but many more hardy kinds than any other grower. Most of those which have any value are crimson sorts. While he has issued far too many indifferent kinds, and so has injured his record, we cannot but be grateful to him for the lovely dark roses he has given us, like Prince Camille, Mme. Victor Verdier, and Fisher Holmes.
4. A. Levet. F. Michelon and Perle des Jardins are his greatest gains. He is profuse in his production of climbing Teas of the Dijon type.
5. Ducher. Strong in Teas.
6. Paul & Son (George Paul). Has given us some dark kinds of wondrous beauty, but they do not thrive in our extreme climate. Perhaps some of his newer ones will be better adapted to our requirements. We miss very much in not being able to grow well S. Reynolds Hole, etc.

7. Schwartz. A. K. Williams and Egeria are among the most beautiful roses, but lack a good constitution. Mesdames Auguste Perin and Oswald de Kerchove are new types, valuable additions to the Hybrid Noisette family.
8. Wm. Paul & Son. Although this firm has sent out no roses of sensational beauty, they have given some that have been useful in their day.
9. Laxton. Those of his raising and Charles Turner are, so far, the most useful English roses for our climate.
10. Pernet. Baroness Rothschild and Soupert-et-Notting are his distinctive sorts.
11. Turner. A raiser with an active conscience. Would there were more !
12. Margottin. His roses, too, have at least been distinct.
13. Liabaud. In the contest for supremacy has brought out some *dark* horses that have some years won the race.
14. Bennett.
15. Moreau-Robert.
16. Damaizin.

17. Lévêque.
18. Granger.
19. Cranston & Co.
20. Postans.
21. Gonod.
22. Sprunt.
23. Nabonnand. This gentleman has sent out some seventy varieties, mostly Teas, but for some reason (is it lack of merit ?) they have not taken well with the public.
24. Garçon.
25. Jamain.
26. Rambaux.
27. Gautreau.
28. Ledéchaux.
29. Charles Verdier.
30. Vigneron.
31. Margottin-fils.
32. Oger. Last and least, is one of the oldest raisers who has sent out a large number of sorts, but the rose public, perhaps being prejudiced, have never seen merit in anything he has produced.

Lest this list of raisers may seem to have been too arbitrarily arranged, we subjoin a list gauged

according to the number and standing of the varieties which represent them (the raisers), as given in the election of exhibition roses, held in England last summer. The result of this election was published in the *Journal of Horticulture*, October 6th, 1881, the best twelve varieties standing in the following order of merit : Marie Baumann, Alfred Colomb, Baroness Rothschild, Charles Lefebvre, Marquise de Castellane, Duke of Edinburgh, Louis Van Houtte, Maréchal Niel, Marie Rady, La France, A. K. Williams, Etienne Levet. The names of eighty-eight varieties are given, and the total number of votes given the several varieties of each raiser determine the relative standing of the raisers. The names of those rosarians now living, as gauged by this election, rank in the following order :

- | | | |
|----------------------------|--------------------|------------|
| 1. E. Verdier | 12 sorts | 423 votes. |
| 2. Lacharme | 11 “ | 409 “ |
| 3. Guillot-fils | 5 “ | 204 “ |
| 4. Levet | 4 “ | 146 “ |
| 5. Paul & Son | 4 “ | 140 “ |
| 6. Pernet | 2 “ | 132 “ |
| 7. Schwartz | 3 “ | 112 “ |
| 8. W. Paul & Son | 4 “ | 101 “ |

9.	Granger.....	3	sorts.....	68	votes.
10.	Baumann.....	1	“	67	“
11.	Jamain	2	“	64	“
12.	Liabaud.....	2	“	63	“
13.	Lévêque.....	3	“	57	“
14.	Turner.....	3	“	43	“
15.	Laxton	3	“	40	“
16.	Ducher	1	“	36	“
17.	Gautreau.....	1	“	34	“
18.	Ward.....	1	“	34	“
19.	Cranston	1	“	28	“
20.	Rambaux.....	1	“	26	“
21.	Postans	1	“	22	“
22.	Damaizin.....	1	“	20	“
23.	Garçon.....	1	“	15	“
24.	Davis.....	1	“	11	“
25.	C. Fontaine	1	“	10	“

It is to be noted that Tea Roses, in the election, play an unimportant part, as in England they are mostly grown under glass, and for exhibition purposes are only to be had in small quantities. Some voters did not consider the Teas at all, confining their votes to hardy varieties, doing this on account of the radical differences which exist between the two classes. This has an im-

portant bearing in estimating the comparative standing of the various growers ; thus, Ducher's *forte* has been the production of fine Tea Roses, and this last list does not give him his just position. We must consider it therefore from the standpoint of *hardy* exhibition varieties ; in doing this, we find an interesting impartial comparison. Seven raisers named in our list find no representation in the election list, these are Sprunt, Nabonnand, Ledéchaux, Charles Verdier, Vigneron, Margottin fils, and Oger. We believe our own list to more correctly represent the comparative merit of the various producers of new roses ; but the latter, as has been said, is certainly impartial, and is the more gladly inserted, to show that we have no bias that influenced us in our arrangement.

CHAPTER XIII.

THE SEED PARENTS OF THE LEADING ROSES.

MY information, whenever possible, has been obtained from the raisers themselves ; there may be some few inaccuracies, but great pains have been taken to make the list as comprehensive and correct as possible. It will be observed that General Jacqueminot, Jules Margottin, and Victor Verdier, have been the most used as parent sorts. While I hope this list will be of general interest, it will, I am sure, be of value to those engaged in raising new varieties. Some few of the varieties are crosses from two known sorts, but only the female parent is given ; this is the case with all the Hybrid Teas of Bennett ; the full parentage of these kinds may be found in the catalogue of varieties. It must not be inferred that all the varieties that bear seed freely are included in this list ; on the contrary, some of the most productive have no representation—such are Baron Chaurand, Jean Cherpin, Dr. de

Chalus, Thomas Mills; while Victor Verdier and Giant of Battles, which seem to seed freely in Lyons, France, rarely bring seed to perfection in Rochester.

Alba Rosea (Tea).—Beauty of Stapleford (Hy. Tea), Nancy Lee (Hy. Tea).

Anne de Diesbach. — Princess Marie Dolgorouky.

Annie Wood.—Edward Dufour.

Antoine Ducher. — Edward Pynært, Ernest Prince, John Saul.

Baroness Rothschild.—Marie Louise Pernet.

Baron de Bonstetten.—Jean Liabaud.

Beauty of Waltham.—John Stuart Mill, Masterpiece.

Catherine Mermet (Tea).—Jules Finger.

Charles Lefebvre.—General Von Moltke, Glory of Cheshunt, Harrison Weir, Henry Bennett, Jean Soupert, Mme. Anna de Besobrasoff, Mrs. Harry Turner, President Léon de St. Jean, Rev. W. H. Stomers, Souvenir du Dr. Jamain, W. Wilson Saunders.

Cloth of Gold (Noisette).—Isabella Gray, Mme. Miolan Carvalho.

Comtesse de La Barthe (Tea).—Countess Riza du Parc, Mme. Joseph Schwartz.

Countess of Oxford.—Dumnacus, Mme. Bruel.

Devoniensis (Tea). — Cornelia Koch, Madame Welche.

Duchess of Sutherland.—Elizabeth Vigneron, Princess M. of Cambridge, Thyra Hammerich.

Duchess of Edinburgh (Bengal or Tea). — Alphonse Karr.

Duke of Edinburgh.—Doctor Hooker, Duke of Teck, Robert Marnock, S. Reynolds Hole, Sultan of Zanzibar, The Shah.

General Jacqueminot.—Alfred Colomb, Alfred de Rougemont, André Leroy, Baron de Rothschild, Camille Bernardin, Charles Lefebvre, Duke of Edinburgh, Dupuy Jamain, Gloire de Santhenay, Horace Vernet, Le Rhone, Léopold Premier, Louis Chaix, Maurice Bernardin, Oriflamme de St. Louis, Prince Arthur, Richard Smith, Sénateur Vaisse, Triomphe des Beaux Arts, Xavier Olibo.

Giant of Battles.—Abbé Brammerel, Arthur de Sansal, Cardinal Patrizzi, Empereur de Ma-

roc, Eugène Appert, Evêque de Nîmes, Lord Raglan, Louis Chaix, Mrs. Standish, Vainqueur de Solferino.

Gloire de Dijon (Tea).—Antonia Decarli, Beauté de l'Europe, Belle Lyonnaise, Gloire de Bordeaux, Jean Lorthois, Mme. Bérard, Mme. Levet, Mme. Trifle, Marie Berton, Mathilde Lenærts, Miss May Paul, Reine Maria Pia, Stéphanie et Rodolphe.

John Hopper.—Ambrogio Maggi.

Jules Margottin.—Abel Grand, Achille Gonod, Berthe Baron, Boieldieu, Charles Margottin, Claude Bernard, Duchess of Vallombrosa, Edward Morren, Egeria, Emily Laxton, John Hopper, Madame Gabriel Luizet, Madame Lacharme, Marchioness of Exeter, Marguérite de St. Amande, Marquise de Mortemart, Monsieur Noman, Pæonia, Peach Blossom, Violette Bouyer.

La Reine.—Anne de Diesbach, Auguste Mie, François Michelin, Gloire de Vitry, Louise Peyronny, Marguérite Dombrain, Mère de St. Louis, Reine des Blanches, Reine du Midi, Souvenir de la Reine d'Angleterre, Ville de St. Denis.

Lamarque (Noisette).—Cloth of Gold, La Jonquille (Tea), Le Pactole, Solfaterre, Triomphe de Rennes.

Lion des Combats.—A. M. Ampère.

Louise Odier (Bourbon). -- Catherine Guillot, Comtesse de Barbantanne, Modèle de Perfection.

Madame Bouton.—Madame Marthe d'Halloy.

Madame Charles Wood.—Guillaume Gillemont.

Madame de Tartas (Tea).—Baron Alexander de Vrints, Marie Van Houtte.

Madame de St. Joseph (Tea).—Hon. George Bancroft (Hy. Tea).

Madame Falcot (Tea).—Madame Azélie Imbert, Madame Bernard, Mlle. Blanche Durschmidt.

Madame Julie Daran.—Charles Darwin.

Madame Laffay.—Marquise A. de Murinais.

Madame Récamier.—Eliza Boelle, Madame Norman.

Madame Victor Verdier.—Comte de Flandres, Mrs. Laxton, Souvenir de Spa.

Madame Vidot.—Princess Louise.

Marquérîte de St. Amande.—Miss Hassard.

Marie Rady.--Mrs. Jowitt.

Ophirie (Noisette).—Duarte d'Oliviera, Ma Capucine, Souvenir de Paul Neyron.

Paul Neyron.—George Moreau, Ulrich Brunner.

President (Tea).—Duchess of Connaught, Duchess of Westminster, Duke of Connaught, Jean Sisley, Michael Saunders, Pearl, Viscountess Falmouth. These are all Hybrids, raised by Bennett.

Safrano (Tea).—Madame Charles, Madame Falcot, Safrano à fleur rouge.

Senateur Vaisse.—Anicet Bourgeois, Madame Adelaide Cote.

Solfaterre (Noisette).—America, Caroline Schmitt.

Souvenir de la Reine d'Angleterre.—Mdlle. Emma Hall, Monsieur Jules Monges.

Souvenir de la Reine des Belges.—Madame Crassy.

Triomphe des Beaux Arts.—Empress of India.

Triomphe de l'Exposition.—General Washington, Maréchal Forey, President Mas, Madame Jules Grévy.

Victor Verdier.—André Dunand, Captain Christy, Charles Verdier, Countess of Oxford,

Etienne Levet, Helen Paul, Hippolyte Jaimain, Julius Finger, Madame Dévert, Madame George Schwartz, Madame Marie Bianchi, Mademoiselle Eugène Verdier, Mademoiselle Marie Cointet, Marie Finger, Maxime de la Rocheterie, Mrs. Baker, Oxonian, Paul Neyron, President Thiers, Souvenir de President Porcher.

Yellow Tea.—Devoniensis.

CHAPTER XIV.

PERMANENT COLORS — TOO - MUCH - ALIKE ROSES. HOW TO DISTINGUISH BETWEEN SIMILAR VARIETIES.

AMONG the many desirable qualities which we should look for in our best roses, permanency of color is not the least important. I have reference more particularly to the Remontant or Hybrid Perpetual varieties ; but my remarks will also apply to the other classes, though perhaps in less degree. It has no doubt often been noticed how differently the various varieties of roses will impress us in different seasons ; that is, a kind which excites our highest admiration one year may more or less disappoint us the next. This arises from various causes, but chief among them is the variation in color produced by different conditions of sunlight, heat, moisture, etc. To know what are the most permanent colors among the innumerable varieties found in the catalogues becomes, therefore, a matter of con-

siderable importance, enabling us to place in favored situations those sorts easily affected by these several conditions, and, if necessary, giving positions exposed to the direct rays of the sun to those varieties which have proved best able to endure them. The most severe ordeal which tries the color of a rose is an excess of moisture followed by a hot sun. Exposed to these conditions many of our choicest sorts, of which Charles Lefebvre and Countess of Oxford are notable examples, lose their pristine brilliancy or purity, and become lamentably faded and sullied. Others, like Louis Van Houtte and Marie Baumann, are under such circumstances much less injured, and though losing some of their original freshness still remain exceedingly attractive. Dark roses are, as a rule, the first to fade ; their glory passes away very much sooner than is the case with the rose-colored varieties and those of light shades. Among the crimson sorts we have observed none which retains its color so well as Louis Van Houtte ; this quality, combined with fine form, fragrance, and freedom of bloom, place it at the head of all crimson-maroon roses. Varieties of somewhat lighter shade that rank

high for permanency of color are, General Jacqueminot, Charles Margottin, Marie Baumann, Alfred Colomb. Among the shades of rose that are most durable, we find Marquise de Castellane, Rev. J. B. Camm, Madame Louis Lévêque, Marguérite de St. Amande, Jules Margottin.

From the pink sorts we choose Eugénie Verdier, Egeria, Monsieur Noman, Baroness Rothschild, Captain Christy, Countess of Serenye.

Among roses that fade quickly when exposed to the adverse influences spoken of, are found many of our most beautiful varieties ; by taking pains to place these in the most favored locations we can aid in retaining the natural shades, and thus greatly enhance the value of each kind. All of the Victor Verdier type, except the light ones like Eugénie Verdier ; all of the Giant of Battles type, all of the Duke of Edinburgh type, all of the Charles Lefebvre family, Dr. Andry, Gloire de Ducher, Madame de Ridder, André Dunand, Camille Bernardin, Jean Cherpin, Madame Nachury, Emilie Hausburgh, are examples of beautiful but non-permanent colors.

SYNONOMOUS, OR TOO-MUCH-ALIKE ROSES.—A drawback to the purchase of new varieties is the

knowledge, gained from past experience, that a large number of those sent out as new sorts are not sufficiently distinct from known varieties to prove of any value. This is notably the case with the French roses. In England, more care has been exercised in disseminating new kinds than in France, and in ordering English roses we can do so with some confidence that they will at least be distinct. Before enlarging our already cumbersome list of varieties, we think it of great importance to thoroughly sift the sorts now commonly grown, and where two or more varieties bear a strong resemblance to each other *in the appearance of the flowers*, to reject the inferior kinds. As roses which are synonomous, or too much alike, as regards the form and color of the flowers, we note the following kinds :

Hybrid Remontant.

Alfred Colomb and Wilhelm Koelle.

Anne de Diesbach and Gloire de Paris.

Auguste Mie, Mme. Rival, and Blanche de Beaulieu.

Baron de Bonstetten and Baron Chaurand.

Boieldieu and Mme. Boll.

Charles Lefebvre and Marguérite Brassac.

Countess Cecile and William Griffith.

Coquette des Blanches, Baronne de Maynard,
Louise d'Arzens, Mme. A. de Rougemont,
and Perfection des Blanches.

Egeria, Princess Mary of Cambridge, and
Peach Blossom.

*Eugène Verdier, Marie Finger, and Mme.
Louis Donadine.

*E. Y. Teas, Sénateur Vaisse, and François
Fontaine.

General Jacqueminot, La Brillante, Triomphe
d'Amiens, Triomphe de Beauté, and Rich-
ard Smith.

General Washington and President Lincoln.

*Hippolyte Jamain, Étienne Levet, and Presi-
dent Thiers.

La Reine and Reine du Midi.

La Rosière, Prince Camille, Edouard Dufour,
and Souvenir d'Auguste Rivière.

Louise Peyronny and Laelia.

Lyonnaise, Mme. George Schwartz, and Mlle.
F. de la Forest.

Madame Boutin and Christine Nilsson.

Madame Joly and Michael Bonnet.

Maréchal Vaillant, Avocat Duvivier, and
Pourpre d'Orléans.

* Maurice Bernardin, Exposition de Brie, Ferdinand de Lesseps, and Sir Garnet Wolseley,
Madame Noman and Mlle. Bonnaire.

Mrs. Standish, Cardinal Patrizzi, and Vainqueur de Solferino.

Miss Hassard, Elizabeth Vigneron, Duchess of
Edinburgh, and Duchesse de Vallombrosa.

Portland Blanche and Blanche Vibert.

Souvenir de la Reine des Belges, and Prince
Albert.

Tea Roses.

Adam and President.

Bon Silène and Goubault.

Bougère and Clothilde.

Caroline and Victoria Modeste.

Élise Sauvage and L'Enfant Trouvé.

Gloire de Dijon, Antonia Decarli, and Mme.
Levet.

Le Pactole, Louise de Savoie, and Maréchal
Beauregard.

* Madame Bravy, Alba Rosea, and Mme.
Sertat.

Madame François Janin and Mlle. Lazarine Poizeau.

Madame Joseph Halphen, Bella, Isabella, Pauline Plantier, and Arch-Duchess Thérèse Isabelle.

Madame Maurin and Madame Denis.

Marie Guillot and Triomphe de Milan.

Narcisse and Enfant de Lyon.

* Niphetos and Mathilde.

Perle des Jardins and Perle de Lyon.

Safrano and Madame Charles.

Souvenir d'un Ami and Queen Victoria.

Hybrid Climbing.

Fortune's Yellow and Beauty of Glazenwood.

Bourbon.

Appolline and Pierre de St. Cyr.

Catherine Guillot and Michael Bonnet.

George Peabody, Comice de Tarn-et-Garonne, Dr. Berthet, Dr. Leprêtre, Ferdinand Deppe, General Blanchard, Geo. Cuvier, Jupiter, Omar Pacha, Proserpine, and Souvenir de l'Exposition.

Hermosa, Armosa, Mme. Neumann, and Setina.

Louise Odier and Madame de Stella.

* Maréchal Villars and Belle Isadore.

Paul Joseph and Charles Martel.

Phoenix and Yebles.

Bengal.

Agrippina, Cramoisi-Supérieur, and Eblouissante.

Antheros, Buret, Louis Philippe, President d'Olbecque, Prince Eugène, Purple Crown, and Triumphant.

Noisette.

Champney's Pink Cluster, Belle Marseillaise, and Miss Glegg.

Cloth of Gold and Chromatella.

Eugène Pirolle and Admiral Rigney.

Fellenberg and Beauty of Greenmount.

Isabella Gray and Jane Hardy.

Lamarque and Jeanne d'Arc.

Solfaterre and Augusta.

Moss.

William Lobb and Duchesse d'Ystrie.

Gracilis, Prolific, and Charles Morel.

Oscar Le Clerc and Madame Bouton.

Many of these roses are identical in all respects save name ; the others are certainly too much alike to be grown, even in the largest collections ; for though there may exist some considerable difference in the habit of growth of a few of those coupled together, the distinction between the flowers is exceedingly slight, such as can be observed by experts only. I have in every case placed first the variety which seems on the whole the most worthy of being retained ; in a few instances I have found it difficult to make a decision, this is where an asterisk (*) is prefixed to the name. In all these cases (*) we shall make further study of the slight differences which exist between the varieties so as to determine the best ; we hope to have the aid of others in this matter.

HOW TO DISTINGUISH VARIETIES:—Old rosarians may need no instruction in this matter, but we believe some useful hints may be given to amateurs who find difficulty in ascertaining the difference which exists between varieties that resemble each other. The chief value of such knowledge is in the power given of determining what sorts should be retained as the best of their type, and what rejected as similar but inferior to

them. The flower is naturally the first to claim our attention ; observe first the color, second the form, degree of fulness, and size, third the fragrance. Next, examine the vigor and habit of growth, whether the shoots are upright or spreading; the joints between leaf-stalks, whether close together (short joints), or widely separated (long joints) ; the thorns, whether they be many or few in number, their thickness, length, color, whether straight or hooked ; the leaf-stalks and foliage, whether the leaflets be five, seven, nine, or eleven in number ; the color of the foliage and bark, sometimes dark green, sometimes pale, occasionally brown or red ; further, whether the leaves be small or large, round or long, indented or regular, glaucous and smooth, or curled and rough. Then also we have to consider the productiveness and continuity of bloom, and the hardiness of the plant. A year ago I made the discovery of a fact which has an important bearing in this matter. The majority of Hybrid Remontant Roses have five leaflets, though quite a number of kinds in the class are freely furnished with seven. My discovery was this : All Hybrid Remontant Roses that have seven leaflets

are light-colored sorts, rose-color, pink, etc. Excepting A. Geoffrey St. Hilaire there is no *red* or *crimson* Remontant having seven leaflets ; by this I do not mean that a leaf-stalk of a red or crimson sort is *never* furnished with more than five leaflets ; isolated cases can be observed where seven leaflets are found, just as four and five leaved clover-stalks now and then come to notice.

As a practical illustration of our comments on how to distinguish between similar varieties, we invite the amateur to study and compare Alfred Colomb, Marie Baumann, and Marie Rady ; three of our best roses, sorts which have many qualities in common, so much so that the inexperienced, when first observing them together, might pronounce them the same rose. But the expert at once sees distinctive traits that separate one from the other, he notices that Alfred Colomb is the darkest in shade of the three, that it has a more globular, pointed bud and flower than Marie Baumann ; that the wood is much more smooth than the others ; that *late* in the season the flowers have more substance and are of better quality than Marie Baumann. So, early in the year, he

would select Marie Baumann or Marie Rady as in a degree the most beautiful ; the former more circular and symmetrical, if possible, than Alfred Colomb ; the latter with more substance, and better filled out. And, so continuing the examination, it is found that these roses are sufficiently distinct, one from the other, both in flower and habit, to make the presence of all three most desirable in all choice collections. Now take up Maurice Bernardin and its near relatives. Very close and minute examinations enable us to detect variations in one way and another, but these variations are so slight that we come to the decision that one name will answer for all. It takes close and continued observation to determine which is most worthy of retention. The choice in this case certainly lies between Maurice Bernardin and Ferdinand de Lesseps. Sir Garnet Wolseley has been thought a trifle fuller and of higher finish than the others, but it is less productive and more tender. A study of the other varieties coupled together as synonomous or too much alike, will develop similar conclusions.

CHAPTER XV.

TYPICAL ROSES. CHARACTERISTICS WHICH
ARE COMMON TO CERTAIN VARIETIES IN
DIFFERENT CLASSES.

To know the peculiarities which pertain to certain families of Hybrid Remontant and other roses, would be advantageous to different people in many ways. There are some types, such as La Reine, Jules Margottin, Victor Verdier, and Giant of Battles families, which are quite marked in their characteristics. If all new roses were classified or described as being of such and such origin, or as belonging to a certain class, it would be of great value. The nurseryman is unwilling, with some exceptions, to undertake the propagation of a kind which will not root and grow freely ; he also desires such as are of healthy habit and good constitution, in addition to excellence in color and form of flower. The amateur, perhaps, would not knowingly purchase a variety devoid of fragrance, or one which is

not a free autumnal bloomer. The florist would require that a variety should be of steadfast color, one that does not quickly fade ; or that it should be useful to force, yielding flowers in abundance, etc. If, therefore, new roses were described as belonging to the *La Reine* or *Victor Verdier* type, we should have some very important knowledge of their qualities, since these roses have imparted to their progeny certain distinct attributes by which they may readily be distinguished from others. A consideration of the different prominent types found among Hybrid Remontant and other classes of roses may be studied with interest and profit.

BARONNE PRÉVOST TYPE.—The year 1842 ushered in to rosarians what is now the oldest type of roses in the class, viz., *Baronne Prévost*. It is not a numerous family, and is also of less importance to us than many of the others, but we can well imagine what pleasure it gave, in years gone by, to the rosarians of the day. This type makes long, stout shoots, fortified with red thorns of unequal length, but generally short ; foliage rather oval, somewhat crimped ; flowers large, or very large, of flat shape, very

full, fragrant, of some shade of rose. It is the most hardy type we have. The varieties commonly grown are Boieldieu, Colonel de Rougemont, Madame Boll, Oderic Vital. They are all free bloomers in autumn.

LA REINE TYPE.—In 1844, Laffay introduced what he loyally named Rose of the Queen (Rose de la Reine). This variety bore royal sway for many years ; it not only still sells well and is to be considered a useful rose, but it should also have our esteem as being the parent of a most useful family. The wood is light green, furnished with occasional thorns ; of strong growth ; foliage pale green and crimped.* Flowers various shades of rose, generally of semi-globular form, large, somewhat fragrant ; free in the autumn ; quite hardy, enduring more cold than any of the other families except Baronne Prévost. The leading sorts are : Anne de Diesbach, Antoine Moutin, Auguste Mie, Belle Normande, François Michelon, Gloire de Vitry, Lælia, Louise Peyronny, Madame Alice Durcau, Mme. Nachury, Paul Neyron, Reine du Midi, Ville de St. Denis.

GIANT OF BATTLES TYPE.—The founder of

this family was introduced by Nérard in 1846, and doubtless has Bourbon blood in its veins. The colors are various shadings of crimson, very rich and effective when in perfection, but very fleeting ; the sun soon gives them a muddy hue. The flowers are well shaped, but small, and have slight fragrance ; they are very freely produced in the spring and summer months, but, as a rule, not in the autumn. The shoots are of moderate or short growth, short jointed, erect, very stiff, and covered with very numerous reddish thorns. The foliage is of lustrous dark green, very subject to mildew. They are difficult to propagate from cuttings, and liable to injury from frost. The leading sorts are : Arthur de Sansal, Cardinal Patrizzi, Crimson Bedder, Empéreur de Maroc, Eugène Appert, Évêque de Nîmes, Lord Raglan, Louis Chaix, Mrs. Standish, Vainqueur de Solferino.

GENERAL JACQUEMINOT TYPE.—In 1852, the head of what is now considered the most valuable type made his bow to an admiring world ; clad in rich crimson livery he still commands respect and admiration, and marshalled under his generalship is the army of dark roses which so

excite and please our senses by their charms and loveliness. This family probably originated from the old Hybrid China Gloire des Rosomanes ; they are moderately hardy, but less so than those of the Baronne Prévost, Jules Margottin and La Reine types. The flowers are invariably shades of red and crimson, generally high perfumed, freely produced in the spring, but varying greatly as to their autumnal bloom. As a family they are much more shy in the autumn than any of the others.

The shoots are of vigorous growth, not very thick, generally upright, with quite numerous light green spines ; the foliage handsome, rather pointed. It is now the most numerous of the families, popular taste demanding crimson roses and those of dark shades. Leading varieties of the type are : Beauty of Waltham, Camille Bernardin, Dupuy Jamain, Léopold Premier, Marie Baumann, Marie Rady, Maurice Bernardin, Pierre Notting, Prince Arthur. There are also Charles Lefebvre, Alfred Colomb, Duke of Edinburgh, Prince Camille, and Sénateur Vaisse, which are supposed to be seedlings of Jacqueminot, but they cluster about them other

varieties of the family, and are worthy of separate mention and consideration.

VICTOR VERDIER TYPE.—The head of this family originated with Lacharme, of Lyons, and was sent out by him in 1852. It is doubtless from one of the La Reine type crossed with some monthly rose, probably a Bourbon. The descendants are very numerous, and in spite of their rather tender habits form a valuable group, being the most free flowering of them all ; had they but fragrance they would be unrivalled ; but, alas ! they are devoid of scent, and therefore cannot rank as high as the others. Fine feathers alone do not constitute fine birds, and surely fragrance is to the rose what song is to the bird. The shoots are of moderate growth, stout, upright, nearly smooth, of a reddish green, with an occasional reddish thorn ; the foliage is very large, of a deep lustrous green, very attractive. The flowers are large, well built up ; generally shades of rose and pink prevail. It is the best adapted for forcing in winter of all the families.

The leading varieties grown are André Dунand, Captain Christy, Charles Verdier, Countess

of Oxford, Etienne Levet, Hippolyte Jamain, Julius Finger, Mme. Geo. Schwartz, Mme. Dévert, Mme. Eugène Chambeyran, Mme. Louis Donadine, Mme. Maxime de la Rocheterie, Mlle Eugénie Verdier, Marie Cointet, Marie Finger, Mrs. Baker, Oxonian (somewhat fragrant), President Thiers, Pride of Waltham, Rosy Morn, Souvenir de Président Porcher.

JULES MARGOTTIN TYPE.—In 1853 Jules Margottin, of Bourg-la-Reine, near Paris, sent out a fine rose, which he called after himself ; though he has been raising seedling roses ever since, none of them have quite come up to this in worth. Wood, light green ; sharp, red thorns, somewhat numerous ; shoots rather stout and generally of vigorous growth. Crimped foliage. Flowers of large size, very full, somewhat flat shape, mostly shades of rose and carmine, almost without perfume ; generally free in the autumn. They are very hardy ; as a rule difficult of propagation from cuttings, but making very vigorous plants when budded.

Abel Grand, Achille Gonod, Bessie Johnson (quite fragrant), Claude Bernard, Countess of Serenye, Duchesse de Vallombrosa, Edward

Morren, Egeria, Emily Laxton, John Hopper, Magna Charta, Madame Gabriel Luizet, Madame Lacharme, Madame Louis Lévêque, Mademoiselle Thérèse Levet, Marchioness of Exeter, Marguérite de St. Amande, Marquise de Castellane, Miss Hassard (scented), Monsieur Noman, Pæonia, Peach Blossom, Princess Mary of Cambridge, Rev. J. B. Camm (very sweet), are the leading sorts.

SÉNATEUR VAISSE TYPE.—Sénateur Vaisse was introduced in 1859. In this family we find what are perhaps the most perfectly formed flowers. The varieties are of moderate growth, with smoother wood than most dark roses ; the foliage, too, is more round and of a deeper green. Anicet Bourgeois (new), E. Y. Teas, Madame Adelaide Côte (new), Madame Victor Verdier, and Mrs. Laxton are members of this group.

CHARLES LEFEBVRE TYPE.—Lacharme introduced Charles Lefebvre in 1861. He believes that it is the result of a cross (I infer by natural agencies) between Victor Verdier and General Jacqueminot ; it certainly shows many of the characteristics of these two sorts. The wood and foliage are light green ; occasionally armed with

pale red thorns, but as a rule the wood is very smooth. The flowers are more waving in outline than any of the other families ; the habit of growth is free, intermediate between Victor Verdier and General Jacqueminot. Glory of Cheshunt, Harrison Weir, Henry Bennett, Madame Anna de Besobrasoff, Marguérite Brassy, Paul Jamain, President Léon de St. Jean, and W. Wilson Saunders are marked members of this type. Dr. Andry, Horace Vernet, Lord Macaulay, Mrs. Harry Turner, Rev. W. H. Stomers and Souvenir du Dr. Jamain, also seem to find a place in this group.

PRINCE CAMILLE TYPE.—In 1861 E. Verdier sent out Prince Camille de Rohan. In this type we find the darkest, most velvety roses. It would seem as though this family must have been produced by the blending of General Jacqueminot with Giant of Battles. The varieties are of vigorous or free growth ; the wood is somewhat darker, the spines less numerous, the habit more spreading than in those of the Jacqueminot type. None of them bloom freely in the autumn, but in the spring their wondrous rich crimson shades gain more admirers than any

others. Baron Chaurand, Baron de Bonstetten, La Rosière, Monsieur Boncène, are prominent members of this family. Abel Carrière, Jean Liabaud, Jean Soupert, and Souvenir d'Auguste Rivière can also be classed with these; though they show more of the Giant of Battles character than the former, and might therefore not inappropriately be placed by themselves.

ALFRED COLOMB TYPE.—Alfred Colomb, sent out in 1865, has a somewhat similar habit of growth to General Jacqueminot, but the thorns are much less numerous, and with a more yellow hue; the flowers are also fuller and more globular, and blossom much more abundantly. A. K. Williams, Madame Alphonse Lavalley, and Wilhelm Koelle, may be grouped under this head.

DUKE OF EDINBURGH TYPE.—The only English rose which is the head of a type was sent out by George Paul in 1868. The habit of growth is much like that of Jacqueminot, but the foliage is generally longer and larger. The flowers are not permanent in color, burning very quickly in the sun, and are very sparsely produced in the autumn. It is a very beautiful family when grown in a moist, cool climate; but there are

few of the members that will do well under our hot sun. The varieties best known, mostly of recent origin, are : Brightness of Cheshunt, Dr. Hooker, Duke of Connaught, Duke of Teck, Robert Marnock, S. Reynolds Hole, Sultan of Zanzibar, The Shah.

All of the types described above belong to the Hybrid Remontant Class of Roses. Among the Hybrid Noisettes we find two types, the first is the—

MADemoiselle BONNAIRE TYPE.—The flowers are of medium size, and of circular, very beautiful form. The growth is moderate, or dwarf. The foliage is rather small and somewhat crimped ; the wood light green, fortified with numerous small spines. Though devoid of fragrance, these are our most charming white roses ; the flowers are freely produced throughout June and the summer months. The varieties belonging to the type are Eliza Boelle, Madame Norman and Madame Oswald de Kerchove.

MADAME A. DE ROUGEMONT TYPE.—The varieties of this type differ greatly from those of the preceding. The habit of growth is free or vigorous ; the wood is smoother, the foliage

more oval and glaucous, like the Bourbon roses ; the flowers are even more freely produced than those of the other type, but are inferior to them in quality. The principal sorts are : *Baronne de Maynard*, *Coquette des Alpes*, *Coquette des Blanches*, *Madame Auguste Perrin*, *Madame François Pittet*, *Perfection des Blanches*.

GLOIRE DE DIJON TYPE.—The head of this family was sent out in 1853, and is the variety from which most of the Climbing Teas have sprung. Young plants of this type are often difficult to start after being rooted from cuttings, but when well established grow luxuriantly. The parentage of *Gloire de Dijon* is unknown, but I believe it must have originated from a natural cross between some Bourbon and Noisette (Tea-scented) Rose. The foliage shows much of the Bourbon character ; the flowers are of globular form, very large and full. Varieties belonging to this type are *Antonia Décarli*, *Belle Lyonnaise*, *Gloire de Bordeaux*, *Jean Lorthois*, *Madame Bérard*, *Madame Trifle*, *Marie Berton*.

These types are about all that are really distinct ; among the Hybrid Teas it is likely that a separation into groups will be desirable at some

time in the future, as this is destined to be an increasing class ; but at the present time La France represents the class in a sufficiently distinct way. The Teas might be arranged in family groups, but this is a task which I shall not attempt until some other time ; it would be a division less useful than those given.

CHAPTER XVI.

RAISING NEW VARIETIES.

NEW Roses occasionally come as sports, but the only method depended upon for their production is sowing seed. Roses of the past have, for the most part, been the product of nature unaided by the hand of man. The common practice has been to gather the seed, without even keeping the varieties separate, and to sow it promiscuously. There are a few instances recorded where artificial crossings have been resorted to, with successful results, but the number of such operators has been very limited. It is a well-known fact that most fruits and flowers seldom reproduce themselves with exactness from seed ; there is often a close resemblance, yet some divergence from the original. Nature is constantly struggling for variation ; even though the pistils receive pollen from their own flower alone, this law holds good ; but through the agencies of wind, insects, etc., the pollen from one flower is often carried to the pistils of another, and so

natural crossing or hybridization takes place. Thus, by simply gathering and sowing the seeds of one variety, like General Jacqueminot, it has been possible to produce a large number of distinct kinds of great value. This, as stated above, has been the practice up to the present time, but it is a practice on which we should no longer exclusively depend ; on the contrary, for the roses of the future we should mainly rely on artificial crossing and hybridization, or, in other words, on manual fecundation.

Laffay, who raised most of the Hybrid Remontants of value that were sent out previous to 1850, is understood to have produced many, or the most, of them, by crossing varieties of the Bourbon Rose with the old crimson Rose du Roi. Vibert, Hardy, and some other of the French rosarians, are also credited with having produced many of their most beautiful sorts by manual fertilization, but as no record has been kept of the varieties used as parents, the result of their work is of no use to the hybridizer of the present day further than it affords proof that definite results are more certain from artificial than from natural crosses.

The following sorts are all claimed as the result of artificial crossing ; the parentage will be found in the catalogued list of varieties : America, Baronne de Maynard, Captain Christy, Harrison Weir, John Hopper, Jules Finger, Julius Finger, Marie Van Houtte, Madame Lacharme, Madame Oswald de Kerchove, Madame Welche, Mrs. Jowitt, Mrs. Harry Turner, Paul Neyron, Princess Mary of Cambridge, Reine Marie Henriette, and the ten Hybrid Teas sent out by Bennett.

To trace out the peculiarities of these kinds, learning so far as possible what influence each parent had in forming the qualities of the offspring, would be an interesting, profitable study. Thus, examining Paul Neyron, we find it has the smooth wood, glaucous foliage, fulness of flower, and tendency to winter-kill from the seed parent, Victor Verdier. The vigor of growth and size of flower are inherited from the fructifying sort, Anne de Diesbach. In this example it will be seen that the influence of the parents has been nearly equal in impressing their characteristics. In other examples it will be found that the influence of one parent has been far greater

than the other ; but I hold it as an axiom that, in the case of any rose which is crossed by another variety, the progeny will surely show traits pertaining to both parents. Among men we find great divergencies of character between brothers and sisters, yet it is observed they always hold something in common which distinguishes them, some link which connects one with another. It is believed by some of the raisers who have practised hybridization, or crossing of roses, that seedlings of greater beauty are to be obtained simply by selecting heps from naturally fertilized flowers, than from those which have been artificially crossed ; that there are very many types among roses which are all beautiful in their way, but that when these are crossed, the varieties which result will have coarsely formed flowers, or be of weak constitution, etc. Such, I infer, is the belief of Messrs. Laxton, William Paul, and others of the English rosarians. With all deference to these gentlemen, whose experience certainly gives weight to their belief, I do not subscribe to this opinion. I cannot but believe that we are even more certain of obtaining flowers of high finish from artificial than we are from nat-

ural fertilization, if we will but pattern after nature and carefully study the laws of cause and effect.

Though there is a difference of opinion respecting the quality and finish of the roses likely to result from manual fecundation, all practitioners admit that there is a certainty by this method of obtaining a product distinctive in character, which is of itself a sufficient inducement to encourage our best efforts in this line. But the truth is, so few crossed roses have been raised, compared to the number from natural selection, that we have learned very little about the successes and failures that have attended the operators in this field of study. Very few of those who have engaged in this work have given us any information that will be of use to those who wish to experiment. It seems to me, the lack of finish and delicate constitution, averred to belong to varieties raised from artificial crosses, comes from bringing together roses of different types, too widely separated in character to blend well. I believe roses belonging to the same type will always cross with good results. Those who wish to practice this art will do well, therefore,

to begin with crossing varieties of the same family ; the chapter on Typical Roses, which precedes this, should be carefully perused as bearing on this point.

In this connection it may be profitable for us to consider briefly the result of Mr. Bennett's labors in the hybridization of roses. Mr. Bennett fertilized the flowers of various Tea Roses with the pollen of Hybrid Remontants, his productions are therefore true hybrids, not crosses merely, and they are classed as Hybrid Teas. Ten of these hybrids have been raised by Mr. Bennett. We would prefer to consider sorts that have been longer in cultivation, but there are none such. As a rule, the Bennett Roses lack a vigorous and healthy constitution ; the best of them, for out-door culture, is Michael Saunders, raised from President fertilized by Madame Victor Verdier. The parents of this sort have comparatively smooth wood, and they are not so widely separated in character as to prevent the production of a healthy offspring. Beauty of Stapleford, the second in point of general usefulness, resulted from crossing Alba Rosea by Countess of Oxford, both smooth-

wooded kinds again, of similar vigor of growth. Two objectionable qualities in this rose, a tendency to fade quickly and a liability to mildew badly, are inherited from Countess of Oxford. Yet these are both roses likely to be esteemed generally useful.

From Alba Rosea crossed by Edward Morren came Nancy Lee, an exquisite little rose, with lovely buds, but in habit of growth so dwarf and delicate that our commiseration is excited along with our regard. Duchess of Westminster and Pearl are others of the same class, which are the result of crossing varieties very widely separated in habit of growth; and none of the progeny have constitutions of any vigor. In Duke of Connaught we have the offspring of President crossed by Louis Van Houtte ; both parents are smooth-wooded sorts, but no nurseryman can, by ordinary culture, grow from cuttings plants of Louis Van Houtte that will be salable after one season's growth. With such a parent we cannot wonder that the propagation of good plants of Duke of Connaught has been found so tedious and discouraging by those who have undertaken it. I understand that some of the New

Jersey florists are growing this variety with profit, but this simply shows what great skill can do, and does not prove that the variety will be generally useful.

Jean Sisley and Hon. George Bancroft are two others of Bennett's set which fade very quickly ; besides this fault the former sort is very difficult to open and we condemn it as utterly worthless ; the latter variety, if grown so that the original color is retained, will generally give satisfaction, though many more malformed blooms are produced than we expect to see in a variety put down as desirable.

Duchess of Connaught shows considerable resemblance to La France, and affords evidence that La France must certainly be a Hybrid Tea. It seems to me that the Duchess only differs from La France in various ways, to be inferior to it.

Now these Bennett Roses, taken as a whole, would seem to strengthen the view of Messrs. William Paul and Laxton, unless we carefully consider the nature of the crosses that were made. From what has been shown we think the inference may naturally be drawn, that in crossing

roses we are likely to obtain satisfactory results by blending varieties which have several characteristic features in common. Thus, varieties of the same type will be pretty certain to effect good crosses ; as General Jacqueminot with Xavier Olibo, Fisher Holmes with Baronne de Bonstetten, Madame Victor Verdier with E. Y. Teas, etc. By hybridizing, bringing Teas and Hybrid Remontants together, we are much less sure of obtaining new sorts of high finish and robust constitution, but far more certain of procuring kinds thoroughly distinct. The operator will then do well to bear this rule in mind : *Crossing varieties of the same type will produce seedlings of the best form and finish ; blending sorts of different types will bring forth the most distinct kinds.* In order to gain knowledge, it is well to practice both these extremes, but the best success will probably follow where a mean course is pursued.

This matter of cross fertilization of roses places before us a vast field in which to study and experiment ; and although we have so little to be drawn from the past which may guide us, it seems an attractive feature connected with it, the

fact of its being largely unexplored. We can experience somewhat similar sensations to the traveller who penetrates a new country, for though he may not be the first to make discoveries, he can be among the first to chronicle results and make the discoveries useful. It is still open for investigators to learn and make known general principles, which should guide us in raising new roses. It will be a gratification for me to know that I have contributed, in some measure at least, to this result.

As few readers are likely to be familiar with the mode of manual fecundation, I will briefly explain what is my practice. The work is much the easiest to manage under glass, for the reason that insects are not there troublesome and we do not have wind and rain to contend with. Whenever possible, choose a clear day, and operate in the morning, so that the flowers can be exposed to the influence of the sun immediately after they have been fertilized. The flower selected for a female parent should have the stamens carefully removed by means of a fine pair of embroidery scissors, a few hours before the pollen is ripe. Should the pollen be quite ripe, some of

it is likely to have fallen on the pistils and a perfect cross could not then be assured. If, on the other hand, it be not nearly matured, the pistils are not in proper condition to be fertilized. In such a variety as General Jacqueminot, the stamens should be removed three or four hours before the flower would expand. The petals are then to be gently pulled off, and the stamens cut away. The pollen is then applied to the pistils by carrying to them the flower of the fertilizing sort and gently rubbing them with the stamens holding the pollen, so that the pistils are well covered. If preferred, a fine camel's-hair brush may be used for the purpose of applying the pollen. The pollen must be quite ripe; if it does not attach itself readily to the brush it is not yet in fit condition for use. Those varieties which are not very double will give more pollen and be better seed-bearers than the very full ones. Kinds like Bon Silène, Safrano, Fisher Holmes, Jean Cherpin, etc., will be found the most suitable for first experiments. If the operation is carried on out of doors, it is desirable to cover the flowers fertilized with fine gauze, to prevent the interference of insects. The insects are not

apt to go to flowers from which the petals have been removed, but it is well not to depend on this. The heps should not be gathered until fully ripe, say after the first frost in October ; they are then labelled and buried in pots of moist sand. The pots must be covered with glass or something of the kind to keep out mice, who are very fond of the pods. I allow the pods to remain in the sand till the first of January, they are then broken open, the seed taken out, and sown in boxes or pots. The seeds commence coming up three or four weeks after being planted. The seedlings appear with two leaves ; so soon as they make a second growth they are pricked out by a knife blade and planted in small pots. They are very subject to mildew, and many are apt to pass away from this cause. In May they can be transplanted and put in open ground, in rich, well-drained soil. If they do well they can be left there over winter, of course being protected, and allowed to remain for testing. They commence to flower the second year, but many of them show no signs of bloom until the third or fourth year. Instead of planting them out in open ground, some or all can remain

in pots, the plants being shifted from time to time to pots of a larger size. One is apt to become very impatient waiting for the seedlings to flower ; the result can be hastened by taking buds from them and inserting on some stock of good growth. Many of the seedlings will produce flowers quite single ; these plants are to be at once rooted out. Now and then we may find double flowers of good finish ; these are to be compared with flowers of old varieties, which they seem most to resemble, to ascertain whether they are distinct sorts or only inferior imitations of established favorites. It will often require considerable moral courage to refrain from calling our geese, swans. But if it is found, and admitted by general consent, that we have originated something both beautiful and distinct, ah, what pride and satisfaction do we feel ! Surely, there can be no more pleasing occupation for those who love and grow roses, than by hybridizing and crossing artificially to engage in the art of producing new varieties, aye, and not of new varieties only, but of new types of roses now unknown. “ This is an art which does mend nature, change it rather ; but the art itself is nature.”

APPENDIX.

PUBLICATIONS ON THE ROSE.

IN the preface to this book I stated my belief that no compilation on the rose could ever be considered complete and final. I have endeavored to bring before those interested in the subject many points of interest which have been ignored, or lightly touched upon, by authors of kindred works ; I have also desired to present all the information necessary to the successful cultivation of the rose, exemplified in different ways. I feel, however, that it is but just to my readers, and my brethren of the craft, to record those publications which are useful compilations on this subject. First of all, and above all, let me recommend “ A Book about Roses,” by S. Reynolds Hole ; Wm. Blackwood & Sons, publishers. This book of 322 pages is a charming compilation by a gifted writer, who, though in one sense an amateur, has perhaps done more to further the growing of beautiful roses than any other man.

No one has ever written on floricultural subjects so lovingly, so attractively, as Canon Hole ; he is in this respect above and beyond all writers, and his book is an adviser and companion that no rosarian can afford to be without.

“ The Rose Garden ” is a large volume of 256 pages, by William Paul, Kent & Co. publishers. This is a book prepared with care and contains much of interest ; perhaps that which is most valuable is the chapter on hybridizing.

“ The Amateur’s Rose Book,” by Shirley Hibberd ; Grombridge & Sons, publishers ; “ The Rose Amateur’s Guide,” by Thomas Rivers ; Longmans, Green & Co., publishers, rank next in merit. “ Roses and Rose Culture,” by William Paul ; “ Cultural Directions for the Rose,” by John Cranston ; “ Roses and their Culture,” by W. D. Prior, are other English works which may be added to the library of any one interested in floricultural matters.

In the French language we have “ Les Roses,” by Jamain and Forney, a work made expensive by the use of gilt edges and colored illustrations, we regret to say of dreadful character. A new work in German, by Thomas Nietner, was pub-

lished in 1880. This is the largest book on the rose that I know of. It is illustrated with 106 woodcuts and 12 colored plates. The author describes 5007 varieties of roses. The colored illustrations are very beautiful, on the whole, but not all true to nature. In the names of varieties the author often mixes the English, French, and German languages very grotesquely. There are many typographical and other errors, but it is a book worth having if one is willing to pay the price, which is of necessity high.

American publications on the rose are : “ The Book of Roses,” by Francis Parkman ; “ Parsons on the Rose,” by Samuel B. Parsons ; “ Prince’s Manual of Roses,” by W. R. Prince, and “ The Rose Manual,” by Robert Buist. I believe the last two named are out of print.

Of magazines and papers, which frequently contain articles on the rose that are of interest, there are many. Those which give the most attention to the subject are : *The Gardener’s Monthly*, published by Charles H. Marot, 814 Chestnut Street, Philadelphia. Price \$2.10 per year. *The American Garden* (monthly), pub-

lished by B. K. Bliss & Sons, 34 Barclay Street, New York. Price \$1 per year. In England there are, *The Gardener's Chronicle*, published by W. Richards, 41 Wellington Street, Strand, London ; *Journal of Horticulture*, published by E. H. May, 171 Fleet Street, London ; *The Garden*, published by William Robinson, 37 Southampton Street, Covent Garden, London ; *The Gardener's Magazine*, published by Shirley Hibberd, 4 Ave Maria Lane, London. All of these are weekly papers. In France we find a monthly magazine entitled *Journal des Roses*, published by S. Cochet, à Suisnes, près Brie-Comte-Robert (Seine-et-Marne), France. The last-named periodical is the only one devoted exclusively to the rose.

CATALOGUE OF VARIETIES,

DESCRIBING ALL SORTS NOW IN GENERAL
CULTIVATION.

A REGISTER of this nature cannot attain absolute perfection, but I have been at great pains to make it complete and accurate. As regards the age of the different varieties and by whom sent out, I have obtained my information from the raisers themselves, their catalogues, from various horticultural magazines and books, mostly French, and from a few amateurs, who have interested themselves in the subject. Among these are Mons. Jean Sisley, whose monograph of the roses raised at Lyons has been of valuable service. I believe this will be found much the most reliable list of the kind, but from seeing so many inaccuracies in others of similar character I know there must be some errors in this. Any of my readers who may discover mistakes or misstatements of facts will greatly oblige by communicating with me, giving the authority which they have. In the descriptions, the more popu-

lar sorts are more fully treated than those not so well known ; where a variety is described as belonging to a type, a lengthy description is rendered unnecessary and only the most distinctive features are given. A familiarity with the contents of Chapter XV. will therefore be a great help to those who wish to gain a correct impression of the varieties here described.

In compiling this list the following method has been determined on as the best. The name of the variety is first given ; then, the habit of growth ; next, in ruled column, letters which show to what class the variety belongs ; then, name of the raiser, and year when the rose was sent out ; afterwards, the parentage, if known, or type to which the sort may belong ; and, lastly, the description. In case of synonyms, they are placed in brackets after the accepted name. This arrangement has been determined upon, after much careful thought, as the best that can be made. It is desirable to add the following, as an explanation of the method used in describing varieties :

Color—the prevailing shade in the most perfect development of the flower.

Size—small, from one to two inches in diameter ; medium, from two to three inches in diameter ; large, from three to four inches in diameter ; very large, above four inches in diameter.

Fulness—semi-double, with two to four rows of petals ; double, having more than four rows of petals, but the seed organs are shown when the flower expands ; full, in which the expanded flowers seldom show the stamens.

Form—cupped, the inner petals are shorter than the outer ones, the latter stand erect and are generally incurved ; globular, outer petals are concave, often with convex edges, the petals fold richly one about the other ; reflexed, numerous petals, generally small, rising tier above tier to the centre ; flat, the surface of the flower is level and all the petals are exposed to view—varieties of this kind are very full and rarely are seed-bearers.

Abbreviations used, describing the habit of growth :

Vig., Vigorous.—Those sorts which are most luxuriant in growth.

Free.—Varieties which rank next in order, pro-

ducing shoots somewhat shorter or less strong than the first.

Mod., Moderate.—These kinds make a compact growth, but do not produce long shoots.

Dwf., Dwarf.—These are the most delicate or slow-growing sorts. Among hardy roses, those marked *dwf.* should, almost invariably, be budded.

It is to be noted that nearly all varieties which have in them shades of lilac, violet, or purple are very fleeting in color.

ABBREVIATIONS, DESCRIBING THE CLASSES TO WHICH
THE VARIETIES BELONG.

A.—Austrian.

Ay.—Ayrshire.

Bk.—Banksia.

B.—Bourbon.

B'lt.—Boursault.

Cl.T.—Climbing Tea.

Dam.—Damask.

Ev.—Evergreen.

Fr.—French.

H.Cl.—Hybrid Climbing.

H.N.—Hybrid Noisette.

H.R.—Hybrid Remontant.

H.T.—Hybrid Tea.

Mic.—Microphylla.

M.—Moss.

Mult.—Multiflora.

N.—Noisette.

P.M.—Perpetual Moss.

Pol.—Polyantha.

P.—Prairie.

Prov.—Provence.

S.—Scotch.

T.—Tea Roses.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
1. A. Geoffroy-St.- Hilaire, mod.	H.R.	E. Verdier, 1878. Red, with a shade of crimson; medium size, full; fine, circular form, fragrant and free. Seed organs well developed; seven leaflets are common, a great rarity among dark varieties of this class.
2. A. M. Ampère.	H.R.	Liabaud, 1881. Raised from <i>Lion des Combats</i> .
3. Abbé BramereL. mod.	H.R.	Guillot-fils, 1871. Raised from <i>Giant of Battles</i> . Crimson, shaded with velvety purple.
4. Abbé Girau- dier.	H.R.	Levet, 1869. Bright rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
5. Abbé Reynaud, vig.	H.C.	Guillot-fils, 1863. Large, carmine-rose flowers, not full enough; growth very rank.
6. Abel Carrière, mod.	H.R.	E. Verdier, 1875. Velvety crimson, with fiery centre; large, full flowers, fragrant; short wood, sharp red spines; shows traces of Bourbon blood. A rose of better form and finish than most of the very dark sorts. Shy in autumn.
7. Abel Grand, mod. or free.	H.R.	Damaizin, 1865. <i>Jules Margottin</i> type. Glossy rose, large and full, fragrant; unreliable as to form, often the finest in autumn.
8. Achille Gonod, free.	H.R.	Gonod, 1864. Raised from <i>Jules Margottin</i> . Rosy-carmine.
9. Acidalie, free.	B.	Rousseau, 1837. Blush, often white; fragrant.
10. Adam, mod. (<i>Syn. President.</i>)	T.	Adam, 1838. Salmon-rose, fragrant; esteemed for forcing.
11. Admiral Nelson, vig.	H.R.	Ducher, 1859. Bright crimson, double, cupped form; very spiny, straggling growth; shows Bourbon origin.
12. Admiral Rig- ney.	N.	See Eugène Pirolle.
13. Adolphe Bro- gniart, mod.	H.R.	Margottin, 1868. Carmine-red, full, fragrant.
14. Adrienne Chris- tophle, mod.	T.	Guillot-fils, 1868. Apricot-yellow.
15. African Black, mod.	Fr.	Dark crimson. Not valuable.
16. Agrippina, mod. (<i>Syn. Cramoisi-Supé- rieur.</i>)	Beng.	Introduced to England from China in 1789. Rich crimson, specially valued for its fine buds. A useful sort for bedding out and for forcing. The best of the class.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
17. Aimée Vibert, free.	N.	Vibert, 1828. Raised from <i>Sem- p. rvirens Plena</i> . Pure white, small, double flowers, pro- duced in large clusters ; seven leaflets ; nearly hardy.
18. Aimée Vibert Scandens, vig.	N.	Curtis, 1841. A sport from the above ; identical with the old kind, except that it is of strong- er growth. These pretty sorts are both difficult to propagate from cuttings.
19. Alba Carnea, free.	H.R.	Touvais, 1867. White, tinted with rose ; foliage dark ; seven leaflets are common.
20. Alba Grandiflo- ra, vig.	Bk.	Very small, full flowers, delicate- ly scented.
21. Alba Mutabilis, free.	H.R.	E. Verdier, 1865. Pink, some- times mottled, medium size, double. Wood armed with dark-brown thorns.
22. Alba Rosea, free.	T.	Sarter, 1855. See Madame Bravy.
23. Alexandre Du- titre.	H.R.	Lévêque, 1878. Bright rose.
24. Alexander Fon- taine, vig.	H.R.	Cherry-red ; mildews easily ; shy bloomer.
25. Alexandrine Bachmetieff, mod.	H.R.	Margottin, 1852. Cherry-red, ro- sette shape, medium size ; fo- liage dark ; wood armed with pale red thorns.
26. Alfred Colomb, free.	H.R.	Lacharme, 1865. Raised from <i>General Jacqueminot</i> . Carmine- crimson ; large, or very large, full ; of fine, globular form, ex- tremely fragrant ; green wood, with occasional pale green thorns, the foliage large and handsome. A grand rose ; the most useful, in its class, for general cultivation.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
27. Alfred de Dalmas, free.	P.M.	Laffay, 1855. Pink, small flowers, of poor quality; the wood is very thorny; straggling habit.
28. Alfred de Rougemont, free.	H.R.	Lacharme, 1863. Raised from <i>General Jacqueminot</i> . Crimson-magenta, very large, full, well built, fragrant; rather shy bloomer.
29. Alfred K. Williams, mod.	H.R.	Schwartz, 1877. Magenta-red, shaded with crimson; large, full flowers, partly imbricated. A very beautiful rose; but, thus far, not constant and reliable.
30. Alfred Leveau.	H.R.	Vigneron, 1880. Carmine-rose.
31. Alice Dureau.	H.R.	Vigneron, 1867. Rosy-lilac, good globular form.
32. Alice Leroy, mod. or free.	M.	Trouillard, 1842. Pink, semi-double; buds are not mossy. Armed with very red spines.
33. Aline Sisley, mod.	T.	Guillot-fils, 1874. Violet-rose, not a clear shade; a fruity, pleasant fragrance.
34. Alpaide de Rotalier, free.	H.R.	Campy, 1863. Rose-color.
35. Alphonse Damaizin, mod.	H.R.	Damaizin, 1861. Bright crimson.
36. Alphonse Karr.	H.R.	Portemer, 1845. Flesh color, margined with carmine.
37. Alphonse Karr.	H.R.	Feuillet, 1855. Bright rose, medium size, full.
38. Alphonse Karr, mod.	B.	Nabonnand, 1878. Raised from <i>Duchess of Edinburgh</i> . Rosy crimson. Sent out as a Tea; but, with its parent, is better placed among the Bengals. There is, as yet, no crimson Tea.
39. Alphonse Mortlemans, mod.	T.	Madame Ducher, 1875. Lilac-rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
40. Amabilis, free.	T.	Touvais. Flesh color, centre rose; habit, branching.
41. Amadis, vig. (<i>Crim'n Boursault.</i>)	B'tl.	Laffay, 1829. Purplish crimson; semi-double.
42. Amazone, mod.	T.	Ducher, 1872. Yellow, reverse of petals veined with rose; long, well-formed buds; habit delicate.
43. Ambrogio Mag- gi.	H.R.	Pernet, 1879. Raised from <i>John Hopper</i> . Bright rose.
44. Amélie Hoste.	H.R.	Gonod, 1874. Pink, reverse of petals darker.
45. America, vig.	N.	C. G. Page, 1859. (Sent out by T. G. Ward, of Washington.) Raised from <i>Solfaterre</i> × <i>Safrano</i> . Pale yellow, with fawn centre; large, full flowers; more shy than either parent.
46. American Ban- ner, dwf.	T.	G. Cartwright, 1879. (Sent out by Peter Henderson.) A sport from <i>Bon Silène</i> . Carmine, striped with white, semi-double; the flowers and foliage are both small. Of no value except as a curiosity.
47. André Dunand, mod.	H.R.	Schwartz, 1871. Raised from <i>Victor Verdier</i> . Silvery rose; fades quickly and often opens badly.
48. André Leroy, mod.	H.R.	Trouillard, 1868. (Sent out by Standish.) Crimson, with a shade of violet; an attractive color, but very transient; often ill-formed.
49. Anicet Bour- geois.	H.R.	Moreau-Robert, 1880. Raised from <i>Senateur Vaisse</i> × <i>Madame Victor Verdier</i> . Cherry-red, cupped form.
50. Anna Alexieff, free.	H.R.	Margottin, 1858. Rose color, large, full flowers, freely produced.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
51. Anna Eliza, vig.	P.	Williams. Red, tinged with lilac numerous thorns.
52. Anna Ollivier, mod.	T.	Ducher, 1872. Buff, shaded with rose.
53. Anna Maria, vig.	P.	Feast, 1843. Pale pink ; very few thorns.
54. Anne de Diesbach, vig.	H.R.	Lacharme, 1858. Raised from <i>La Reine</i> . In color, the most lovely shade of carmine ; very large, double flowers, fragrant ; one of the hardiest. A very desirable garden rose.
55. Anne Marie Cote, free.	H.N.	Guillot-fils, 1875. White, sometimes tinged with pink.
56. Anne Marie de Montravel, mod.	Pol.	Rambeaux & Dubreuil, 1879. Very small, full, white flowers, somewhat fragrant. Resembles Paquerette.
57. Annie Laxton, mod.	H.R.	Laxton, 1869. (Sent out by Geo. Paul.) Satiny rose, medium or large size, very full.
58. Annie Wood, mod. or dwf.	H.R.	E. Verdier, 1866. Bright crimson with a shade of vermilion ; a good autumnal rose.
59. Antheros.	T.	Lepage. Flesh color, shaded with yellow.
60. Antoine Devert.	T.	Gonod, 1880. White, tinged with pink, reverse of petals shaded salmon.
61. Antoine Ducher, mod.	H.R.	Ducher, 1866. Violet-red ; large, well shaped flowers, fragrant ; wood very thorny. The color is very fleeting.
62. Antoine Mouton, vig.	H.R.	Levet, 1874. Deep rose, tinged with lilac, not unlike <i>Paul Neyron</i> ; it is more fragrant and more hardy, but in color and size is below that sort.
63. Antoine Quihou.	H.R.	E. Verdier, 1879. Brownish-crimson.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
✓ 64. Antoine Verdier, mod.	H.R.	Jamain, 1871. Rose shaded with lilac, well formed buds, no perfume; the color is muddy. This sort would not improperly be classed among the Hybrid Teas, as it resembles them in habit as well as in continuity of flowering.
65. Antonia Decarli, vig.	Cl.T.	Levet, 1873. May be briefly described as an inferior <i>Gloire de Dijon</i> , from which sort it was raised.
✓ 66. Apolline, vig.	B.	V. Verdier, 1848. Raised from <i>Pierre de St. Cyr</i> . Rosy-pink; large, cupped flowers. The most useful of all Bourbons for open air.
67. Archduke Charles, mod.	Beng.	Laffay. Rosy-crimson, variable in color, sometimes deep marbled rose.
68. Archimède, free.	T.	Robert, 1856. Rosy-fawn, the centre darker; ill-formed flowers are frequent. A good rose when in perfection, and of excellent habit.
69. Ardoise de Lyon, vig.	H.R.	Plantier, 1865. (Sent out by Damaizin.) Violet rose, a poor color.
70. Aristide Dupuis, vig.	H.C.	Touvais, 1866. Purplish-rose, a muddy hue; double or full, fragrant; of no value.
71. Arthémise, free.	H.R.	Moreau-Robert, 1876. Deep rose color; rather small, cupped-shaped flowers, not unlike <i>Apolline</i> . Only worthy of a place in very large collections.
72. Arthur de Sansal.	H.R.	Cochet, 1855. Raised from <i>Giant of Battles</i> . Deep crimson.
73. Augusta.	N.	See Solfaterre.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
74. Auguste Buchner.	H.R.	Lévêque, 1880. Reddish purple.
75. Auguste Mie, free. (<i>Madame Rival</i> .)	H.R.	Laffay, 1851. Raised from La Reine. Glossy pink. One of the most tender of this type.
76. Auguste Neumann.	H.R.	E. Verdier, 1870. Red, shaded with violet.
77. Auguste Oger, mod.	T.	Oger, 1856. Coppery-rose.
78. Auguste Rigotard.	H.R.	Schwartz, 1871. Cherry-red, somewhat like <i>Dupuy Jamain</i> .
79. Auguste Vacher.	T.	Lacharme, 1853. Coppery yellow.
80. Auretti, vig.	H.C.	Crimson - purple ; fades very quickly.
81. Aureus.	T.	Ducher, 1873. Coppery-yellow.
82. Avocat Duvier.	H.R.	Lévêque, 1875. See Maréchal Vaillant.
83. Baltimore Belle, vig.	P.	Feast, 1843. Pale blush, changing to white.
84. Baron Adolphe de Rothschild, free.	H.R.	Lacharme, 1862. Bright red, shaded with crimson; mildews easily.
85. Baron Alexandre de Vrints.	T.	Gonod, 1880. Raised from <i>Madame de Tartas</i> . Delicate rose.
86. Baron Chaurand, vig.	H.R.	Liabaud, 1869. See Baron de Bonstetten.
87. Baron de Bonstetten, vig.	H.R.	Liabaud, 1871. Velvety maroon, shaded with deep crimson, somewhat lighter in shade than <i>Prince Camille</i> , and rather smaller in size, but with a little more substance ; shy in autumn, but a grand rose.
88. Baron Gonella, vig.	B.	Guillot-père, 1859. Bronzed rose, well formed, fragrant ; non-autumnal.
89. Baron Haussmann, free.	H.R.	E. Verdier, 1867. Dark red, large, well-built flowers.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
90. Baron Taylor, free.	H.R.	Dougat, 1879. A sport from <i>John Hopper</i> . Pink. Only differs from the parent in shade ; it does not appear to be constant.
91. Baron de Rothschild, free.	H.R.	Guillot-fils, 1862. Raised from <i>General Jacqueminot</i> . Amaranth-red.
92. Baroness Rothschild, mod. (<i>Madame de Rothschild</i> .)	H.R.	Pernet, 1867. Light pink, sometimes shaded with rose ; large, or very large ; cupped form, very symmetrical, without fragrance ; the wood is short-jointed, thick, light green, armed with occasional light-green thorns ; one of the hardiest, but does not propagate from cuttings. A very distinct, beautiful rose, free blooming, and greatly valued, both as an exhibition and a garden sort.
93. Baronne de Maynard, mod. or free.	H.N.	Lacharme, 1865. From <i>Blanche Lafitte</i> × <i>Sappho</i> . White, edge of petals often tinged with pink ; small size, compact form.
94. Baronne de Prailly.	H.R.	Liabaud, 1871. Bright red, large, very full ; often does not open well.
95. Baronne de Wassenaar, free.	M.	V. Verdier, 1854. Deep rose ; buds pretty, and quite well mossed.
96. Baronne Louise Uxhull, free.	H.R.	Guillot-fils, 1871. Carmine-rose ; large, highly-scented flowers.
✓ 97. Baronne Prévozt, vig.	H.R.	Desprez. (Sent out by Cochet, in 1842.) Pure rose color, very large, very full, flat form ; a free bloomer, fragrant, very hardy. The shoots are stout and stiff.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
98. Barthélemy Levet, mod.	H.R.	Levet, 1878. Bright rose.
99. Beauté de l'Europe, vig.	Cl.T.	Gonod, 1881. <i>Gloire de Dijon</i> type. Deep yellow; reverse of petals coppery yellow.
100. Beauty of Glazenwood.	Ev.	See Fortune's Yellow.
101. Beauty of Greenmount, vig.	N.	Pentland, 1854. Rosy-red.
102. Beauty of Stapleford, mod.	H.T.	Bennett, 1879. Raised from <i>Alba Rosea</i> × <i>Countess of Oxford</i> . Red, tinged with violet, large, well formed, prettily shaped buds, without fragrance; the color is not pleasing, too soon becoming muddy. Very subject to mildew.
103. Beauty of Waltham, free.	H.R.	W. Paul, 1862. Rosy-crimson, medium, or large size, fragrant; it has the habit of throwing out side-shoots from nearly every eye. This is still a sort to commend.
104. Belle Américaine, mod.	H.R.	Daniel Boll (New York), 1837. Deep pink, double, small, well formed.
105. Belle Fleur d'Anjou, mod.	T.	Touvais, 1872. Silvery - rose, large; rather good.
106. Belle Lyonnaise, vig.	Cl.T.	Levet, 1869. Raised from <i>Gloire de Dijon</i> . Pale, lemon-yellow; less productive than the parent. A fine sort.
107. Belle Maconnaise, free.	T.	Ducher, 1870. Pale salmon-rose.
108. Belle Normande, free.	H.R.	Oger, 1864. A sport from <i>La Reine</i> . Silvery-rose.
109. Bennett's Seedling, vig.	A.	Bennett. Pure white, small, double.
110. Benjamin Drouet, free.	H.R.	E. Verdier, 1878. Red, shaded with purple.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
111. Bernard Pa- lissey, free.	H.R.	Margottin, 1863. Red, medium size, very full, fragrant ; often comes ill formed, sometimes is very fine.
112. Berthe Baron, free.	H.R.	Baron - Viellard, 1868. Raised from <i>Jules Margottin</i> . Delicate rose color.
113. Bessie John- son, mod.	H.R.	Curtis, 1872. A sport from <i>Abel Grand</i> . Blush, highly scented.
114. Bignonia, mod.	T.	Levet, 1872. Red.
115. Black Prince, free.	H.R.	1866. Purchased and sent out by W. Paul. Dark crimson ; not considered a reliable sort, occasionally it is very fine.
116. Blanche de Beaulieu, free.	H.R.	Margottin, 1851. Deep pink, large, loose flowers ; rather tender.
117. Blanche fleur, free.	Fr.	Vibert, 1846. White, tinged with blush, medium size, flat, very full, highly scented. One of the earliest to blossom ; the flowers produced in great profusion. A valuable garden rose.
118. Blanche La- fitte, free.	B.	Pradel, 1851. Blush-white.
119. Blanche Mo- reau.	P.M.	Moreau-Robert, 1880. White, claimed to be a true remontant.
120. Blanche Vi- bert.	Dam.	Vibert, 1838. See Portland Blanche.
121. Blairii No. 2, vig.	H.Ch.	Blair. Pink, large, double ; much esteemed in England as a Pillar rose. We do not value it highly for this climate.
122. Boieldieu, vig.	H.R.	Garçon, 1877. (Sent out by Margottin-fils.) Belongs to <i>Baronne Prévost</i> type. Cherry-red, very large and full, flat form ; will probably supersede <i>Madame Boll</i> . This is more productive, has slimmer wood,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		smaller foliage, stouter thorns than <i>Madame Boll</i> . The latter sort has five leaflets only, this has commonly seven; remembering this, it is easy to distinguish between them.
123. Bon Silène, free. (<i>Silène</i> .)	T.	Hardy, 1839. Deep salmon-rose, illumined with carmine, medium size, semi-double, highly scented, very free flowering. This is only desirable in the bud state; for many years it has been a leading kind for forcing; the English florists have not yet discovered its value.
124. Bougère, free.	T.	1832. Bronzed pink, large and full, thick petals; one of the hardiest. An old variety, yet one of the most desirable.
125. Boule de Nanteuil, mod. or free.	Fr.	Crimson-purple, fades easily; worthless.
126. Boule de Neige, free.	H.N.	Lacharme, 1867. White, small, very full; does not root from cuttings.
127. Boule d'Or, dwf. or mod.	T.	Margottin, 1860. Deep yellow, large, very full; does not open well.
128. Bouquet d'Or, vig.	N.	Ducher, 1872. Yellow, with coppery centre, large, full.
129. Bouton d'Or, mod.	T.	Guillot-fils, 1866. Orange yellow, medium size.
130. Brennus, vig.	H.Ch.	Laffay, 1830. Deep red, shaded with violet. We now have almost the same shade in <i>Cheshunt Hybrid</i> , a more useful sort.
131. Brightness of Cheshunt.	H.R.	G. Paul, 1881. Belongs to <i>Duke of Edinburgh</i> type. Vivid red, medium size.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
132. Cabbage.		See Centifolia.
133. Camille Bernardin, free or vig.	H.R.	Gautreau, 1865. Raised from <i>General Jacqueminot</i> . Light crimson, medium size, semi-cupped form, fragrant; does not bloom until late in the season, and then the flowers fade easily; never very productive.
134. Camoens.	H.T.	Schwartz, 1881. Pale rose, base of petals yellow.
135. Canary, dwf.	T.	Guillot-père, 1852. Canary yellow, beautiful little buds, delicate habit.
136. Cannes La Coquette, mod.	H.T.	Nabonnand, 1877. Raised from <i>La France</i> . Salmon, with a shade of red. Much behind the parent in value.
137. Captain Christy, mod. or dwf.	H.T.	Lacharme, 1873. Raised from <i>Victor Verdier</i> × <i>Safrano</i> . Delicate flesh color, deepening in shade towards the centre, medium size, sometimes large, full; the foliage when young somewhat resembles <i>Mahonia</i> leaves. Ill-shaped flowers are not uncommon, but it is a most lovely sort when in perfection.
138. Captain John Ingram, free.	M.	Laffay, 1856. Purple-crimson, color non-permanent; dark, small foliage, in five leaflets.
139. Captain Lamure, mod.	H.R.	Levet, 1870. Dark red, tinged with violet.
140. Cardinal Patrizzi, mod.	H.R.	Trouillard, 1857. <i>Giant of Battles</i> type. Crimson, with a tinge of purple.
141. Carl Cœrs, vig.	H.R.	Granger, 1865. Purple-red.
142. Caroline, mod.	T.	Rosy-flesh, deeper toward centre; prettily formed buds.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
143. Caroline Cook, mod.	T.	A. Cook, 1871. Raised from <i>Safrano</i> . Apricot - yellow, with a shade of rose; not a valuable sort.
144. Caroline de Sansal, vig.	H.R.	Desprez, 1849. (Sent out by Hippolyte Jamain.) Flesh color, deepening towards the centre; large, full flowers, flat form, often indented; subject to mildew; very hardy. An unreliable sort, but beautiful when in perfection; generally it is of better quality in September than in June.
145. Caroline Mar- niesz, free.	N.	Röser, 1848. Creamy white, small and full; seven leaflets, nearly hardy.
146. Caroline Schmitt.	N.	Schmitt, 1881. Raised from <i>Solfaterre</i> . Salmon-yellow, changing to pale yellow.
147. Catherine Bell, free.	H.Cl.	Bell & Son, 1877. Rose color, large, loose flowers; very poor.
148. Catherine Guillot.	B.	Guillot fils, 1861. Raised from <i>Louise Odier</i> . Rose color.
149. Catharine Mermet, mod. or free.	T.	Guillot fils, 1869. Flesh color, with the same silvery lustre seen in <i>La France</i> ; large, full, well formed; not very productive, yet not a shy bloomer; very beautiful in the bud; when the flowers expand they exhale a delightful perfume. The finest of all the Teas.
150. Catherine Sou- perr, mod.	H.R.	Lacharme, 1879. Rosy-peach; distinct.
151. Céline, dwf.	M.	Robert, 1855. Crimson-purple.
152. Céline Forestier, vig.	N.	Trouillard, 1860. Pale yellow, deepening toward the centre; the hardiest of the Tea-scented section.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
153. Cels-Multiflora, mod.	Beng.	Cels, 1838. Flesh color, very free-blooming.
154. Centifolia, free. (<i>Cabbage</i> or <i>Common Provence</i> .)	Prov.	Rose color, large, full, globular, fragrant. A very desirable garden variety.
155. Centifolia Cristata, free.	Dam.	Vibert, 1827. Large, pink flowers, not crested, fragrant and good.
156. Centifolia Rosea, mod.	H.R.	Touvais, 1863. Bright rose, circular, shell form; light green wood, with numerous red thorns; foliage crimped.
157. Charles Baltet.	H.R.	E. Verdier, 1877. Carmine-red, medium size, full, fragrant.
158. Charles Darwin, free.	H.R.	Laxton, 1879. (Sent out by G. Paul.) Raised from <i>Madame Julie Daran</i> . Brownish crimson, with a shade of violet, very beautiful and distinct; mildews easily.
159. Charles Duval.	H.R.	E. Verdier, 1877. Red, medium size.
160. Charles Fontaine.	H.R.	Fontaine, 1868. Crimson, fragrant.
161. Charles Getz, vig.	B.	A. Cook, 1871. Rosy-pink, medium size, full, fragrant; shy in autumn.
162. Charles Lawson, vig.	H.Ch.	1853. Light rose color, large, full, fragrant; 5 leaflets; useful for pillars.
163. Charles Lefebvre, free. (<i>Marguerite Brascac.</i>)	H.R.	Lacharme, 1861. Claimed to have been raised from <i>General Jacqueminot</i> \times <i>Victor Verdier</i> . Reddish-crimson, sometimes with a shade of purple, very velvety and rich, but fading quickly; large, full, thick petals, beautifully formed. There are a few thorns of light red; the wood and foliage are of

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
164. Charles Margottin, mod.	H.R.	light reddish-green. A splendid rose. Margottin, 1865. A seedling of <i>Jules Margottin</i> . Fiery-red, shaded with crimson; large, full flowers; retains the color well; smooth, reddish wood, armed with occasional red spines; foliage slightly crimped. An excellent, distinct rose, quite unlike the parent in habit. It doubtless comes from a natural cross of some dark sort like <i>Charles Lefebvre</i> on <i>Jules Margottin</i> .
165. Charles Rouillard.	H.R.	E. Verdier, 1865. Pale rose, well formed.
166. Charles Rovoli, free.	T.	Pernet, 1875. Carmine-rose, not unlike <i>Bon Silène</i> , from which variety, so far as our observation goes, it only differs to be inferior.
167. Charles Turner, free.	H.R.	Margottin, 1869. Crimson-vermilion, large, full flowers, flat form, resembling <i>General Washington</i> ; wood armed with numerous dark red thorns. A shy bloomer.
168. Charles Verdier, dwf.	H. R.	Guillot-père, 1866. A seedling of <i>Victor Verdier</i> . Pink, with a tinge of salmon; globular, full flowers; thorns dark-red. A bad one to open, and fades very soon.
169. Chenédolle, vig.	H.Ch.	Bright red, large, double; shoots very spiny, 5 to 7 leaflets.
170. Cheshunt Hybrid, vig.	H.T.	G. Paul, 1873. Believed to be a natural cross from <i>Madame de Tartas</i> × <i>Prince Camille de Rohan</i> . Red, shaded with violet; large, full, slightly fra-

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		grant ; very distinct. A good rose, free in the Spring, but shy in autumn.
171. Christian Puttner, dwf.	H.Ch.	Oger, 1861. Deep violet-rose ; an impure shade.
172. Christine Nilsson, free.	H.R.	Lévêque, 1867. Rose color. In the way of <i>Madame Boutin</i> .
173. Claire Carnot, vig.	N.	Guillot-fils, 1873. Pale yellow, somewhat in the way of <i>Céline Forestier</i> , but more fragrant.
174. Clara Sylvain, mod. (<i>Lady Warrender</i> .)	Beng.	Madame Pean. White, strongly infused with Tea blood.
175. Claude Bernard, mod.	H.R.	Liabaud, 1878. Raised from <i>Jules Margottin</i> . Rose color ; little fragrance ; not a desirable sort.
176. Claude Levet.	H.R.	Levet, 1872. Velvety-red, fragrant.
177. Clément Raoux, vig.	H.R.	Granger, 1868. (Sent out by Charles Lee.) A washed-out pink ; large, fragrant flowers, quartered shape ; worthless.
178. Clément Nabonnand, free.	T.	Nabonnand, 1877. Light yellow, shaded with rosy-salmon ; not valuable.
179. Climbing Captain Christy.	H.Cl.	Ducher & Sœur, 1881. Flowers are like the old variety, from which it is a sport, but the shoots are more slender and longer.
180. Climbing Bessie Johnson, vig.	H.Cl.	G. Paul, 1878. A sport from <i>Bessie Johnson</i> . Like the parent, except more vigorous.
181. Climbing Charles Lefebvre, free.	H.Cl.	Cranston, 1876. Not any stronger in growth than the original.
182. Climbing Countess of Oxford, free.	H.Cl.	Smith, 1875. Of no value.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
183. Climbing Devoniensis, vig.	Cl.T.	S. J. Pavitt, 1858. (Sent out by Henry Curtis.) A sport from <i>Devoniensis</i> . This seems to us as productive as the old sort, and its extra vigor of growth is an advantage.
✓ 184. Climbing Edward Morren, vig.	H.Cl.	G. Paul, 1879. A sport, likely to make a very useful pillar rose.
✓ 185. Climbing Jules Margottin, vig.	H.Cl.	Cranston, 1875. A sport from <i>Jules Margottin</i> . Flowers are the same as in the old sort, except being a little smaller, and for this reason it is finer in the bud state. The best of all the climbing sports; highly commended as a useful pillar rose.
186. Climbing Madame Victor Verdier.	H.Cl.	Cranston, 1877. A humbug.
187. Climbing Mademoiselle Eugénie Verdier, free.	H.Cl.	G. Paul, 1877. "Light rosy-salmon; like all these climbing sports the flowers become smaller, and are produced more freely than the type."
188. Climbing Victor Verdier, free.	H.Cl.	G. Paul, 1871. Flowers somewhat smaller and less freely produced than in the old sort.
189. Cloth of Gold, vig. (<i>Chromatella</i> .)	N.	Coquereau, 1843. Raised from <i>Lamarque</i> . Deep yellow centre, with sulphur edges; large, full flowers. A grand rose, but difficult to grow well.
190. Clothilde.	T.	Rolland, 1867. Creamy-white, centre rosy-salmon.
191. Clothilde Rolland.	H.R.	Rolland, 1867. Cherry-rose.
192. Col. de Rougemont, mod.	H.R.	Lacharme, 1853. Of the <i>Baronne Prévost</i> type. Light rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
193. Colonel de Sansal, mod.	H.R.	Jamain, 1874. Carmine-red.
194. Comice de Seine et-Marne, mod.	B.	Pradel, 1842. Deep red, shaded with violet.
195. Comice de Tarn-et-Garonne, mod.	B.	Pradel, 1852. Carmine - red, well formed.
196. Common Moss free. (<i>Old Moss.</i>)	M.	Pale rose, very beautiful in the bud. Difficult to propagate from cuttings. None others in the class except <i>Crested</i> and <i>Gracilis</i> , can rank with this in quality.
197. Comte A. de Germiny.	H.R.	Lévêque, 1881. Raised from <i>Jules Margottin</i> . Bright rose.
198. Comte d'Eu.	B.	Lacharme, 1844. Raised from <i>Gloire des Rosomanes</i> . Bright, rosy crimson.
199. Comte de Flandres.	H.R.	Lévêque, 1881. Raised from <i>Madame Victor Verdier</i> . "Reddish-purple, velvety, illuminated with carmine."
200. Comte de Gri- vel.	T.	Levet, 1871. Raised from <i>Canary</i> . Pale yellow.
201. Comte de Mortemart, free.	H.R.	Margottin-fils, 1880. Rose color, very fragrant; smooth, pale-green wood.
202. Comte de Nanteuil, vig.	H.Ch.	Quetier, 1852. Light rose, large, full flowers, sometimes with green centre; not unlike <i>Chénédolle</i> .
203. Comte de Paris, mod. or dwf.	T.	Madame Pean, 1844. Flesh color, large flowers.
204. Comte de Sem- bui, mod.	T.	Madame Ducher, 1874. Salmon and rose, the base of petals coppery yellow; large, full flowers, often malformed. A grand rose when well grown, but too unreliable.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
205. Comte de Thun - Hohenstein.	H.R.	Lévêque, 1880. Reddish-crimson.
206. Comte Taverna, mod.	T.	Ducher, 1871. Pale yellow.
207. Comtesse Cécile de Chabrillant, mod.	H.R.	Marest, 1859. Satiny-pink, never above medium size, full, fragrant; of perfect, globular form; numerous dark thorns of small size; foliage dark and tough. A lovely rose.
208. Comtesse de Barban t a n e, free.	B.	Guillot-père, 1858. Raised from <i>Louise Odier</i> . Blush, shaded with rose.
209. Comtesse de Camondo.	H.R.	Lévêque, 1880. Red, shaded.
210. Comtesse de Caserta.	T.	Nabonnand, 1877. Coppery-red.
211. Comtesse de Choiseuil.	H.R.	Mottheau, 1878. Cherry-red, shaded with crimson, in the style of <i>Marie Rady</i> .
212. Comtesse de Labarthe, free.	T.	Bernède, 1857. Pink, shaded with carmine-rose; pretty in the bud.
213. Comtesse de Ludre.	H.R.	E. Verdier, 1879. Carmine-red.
214. Comtesse de Murinais, vig.	M.	Vibert, 1843. White, tinged with flesh; not inclined to mildew.
215. Comtesse de Nadaillac, mod.	T.	Guillot-fils, 1871. Coppery-yellow, illumined with carmine-rose; large, full, distinct and effective; highly esteemed.
216. Comtesse de Ségur.	Prov.	V. Verdier, 1848. Buff-white.
217. Comtesse de Serenye, mod.	H.R.	Lacharme, 1874. Said to be raised from <i>La Reine</i> , but it shows more of the <i>Jules Margottin</i> characteristics. Silvery-pink, often mottled; a full, finely shaped, globular flower,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		of medium size, slightly fragrant ; wood light green, foliage darker, thorns red, seven leaflets. Not reliable about opening, but a very free bloomer, and well worthy a place in a small collection. One of the most distinct ; of great beauty when grown under glass.
218. Comtesse Henriette Combes.	H.R.	Schwartz, 1881. Bright satiny-rose.
219. Comtesse Nathalie de Kleist.	H.R.	Soupert et Notting, 1880. Coppery-rose, reverse of petals lake.
220. Comtesse Riza du Parc, free.	T.	Schwartz, 1876. Raised from <i>Comtesse de Labarthe</i> . Bronzed rose, with a carmine tint ; medium size, moderately full, highly perfumed.
221. Comtesse Ouzarovoff, free.	T.	Margottin, 1861. Salmon-pink.
222. Constantin Tretiakoff.	H.R.	Jamain, 1877. Cherry-red, large, double, without fragrance.
223. Copper, mod.	A.	Coppery-red, very striking shade, semi-double.
224. Coquette des Alpes, vig.	H.N.	Lacharme, 1867. Raised from <i>Blanche Lafitte</i> × <i>Sappho</i> . White, tinged with blush ; size, medium to large ; semi-cupped form, the wood is long, jointed. A very desirable white rose.
225. Coquette des Blanches, free or vig.	H.N.	Lacharme, 1872. Same parentage as above. White, sometimes tinged with blush ; of medium size, very full, somewhat flat, but pretty ; growth bushy. An improvement on <i>Baronne de Maynard</i> and <i>Madame Alfred de Rougemont</i> .

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
226. Coquette de Lyon, mod.	T.	Ducher, 1870. Pale yellow; medium, or small size; pretty in bud, and useful for bedding.
227. Cornelia Koch, free. (<i>Cornelia Cook.</i>)	T.	A. Koch, 1855. Raised from <i>Devoniensis</i> . White, sometimes faintly tinged with pale yellow; very large, full; not a free bloomer. This is quite apt to come with a green centre, but it is a grand rose when well grown, excelling all other white Teas.
228. Countess of Harrington, free.	Fr.	Cup-shaped, white flowers, double, produced in abundance.
229. Countess of Oxford, mod.	H.R.	Guillot-père, 1869. Raised from <i>Victor Verdier</i> . Carmine-red, tinged with lilac, fades quickly; flowers very large and full; subject to mildew.
230. Countess of Roseberry, mod.	H.R.	R. B. Postans, 1879. (Sent out by Wm. Paul & Son.) Belongs to the <i>Victor Verdier</i> type. Cherry-red.
231. Coupé d'Hébe, vig.	H.Ch.	Laffay. Deep pink, medium, or large size, cup-form; seven leaflets. A fine, distinct sort.
232. Cramoisi - Su- périeur, free. (<i>Agrippina.</i>)	Beng.	Plantier, 1834. Rich, velvety crimson, double; fine in the bud. A good bedding variety.
233. Crested Moss, free. (<i>Cristata</i> , or <i>Crested Pro- vence.</i>)	M.	Discovered on the wall of a convent near Fribourg, and sent out by Vibert, 1827. Deep, pink-colored buds, surrounded with a mossy fringe and crest; free from mildew. A fragrant, very beautiful rose.
234. Crimson Bed- der, dwf.	H.R.	Cranston, 1874. Belongs to <i>Giant of Battles</i> type. Crimson.
235. Crimson Moss, free.	M.	Lee. Crimson, semi-double; poor.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
—-. Crimson Perpetual.		See <i>Rose du Roi</i> .
236. Crown Prince.	H.R.	W. Paul & Son, 1880. Reddish-crimson, tinged with purple.
237. David Pradel, mod.	T.	Pradel, 1851. Lilac-rose, large size.
238. Dean of Windsor, mod.	H.R.	Turner, 1879. Vermilion, large, full flowers.
239. De la Grifferaie, vig.	Mult.	1846. Lilac-rose. This variety makes a valuable stock on which to bud strong-growing kinds.
240. Delille, mod.	P.M.	Robert, 1852. Red, tinged with lilac, flat form, fragrant, not mossy. Of no value.
241. De Luxembourg, mod. or free.	M.	Hardy. Crimson, not attractive.
242. DeMeaux, dwf. (<i>Pompon.</i>)	M.	Found growing in a garden at Taunton, about 1825. Pink color, small, full flowers.
243. Desprez, vig.	N.	Desprez, 1838. Rose, blended with coppery yellow, highly scented.
244. Deuil de Paul Fontaine, vig.	M.	Fontaine, 1873. Red, shaded crimson, large, full; not mossy; worthless.
245. Dévienné Lamy, mod.	H.R.	Lévêque, 1868. Carmine-red, well formed; a good sort.
246. Devoniensis, mod. or free.	T.	Foster, 1841. (Sent out by Lumcombe, Pince & Co. Raised from <i>Yellow Tea</i> . Creamy-white, centre sometimes tinged with blush, very large, almost full; one of the most delightfully scented. Either this or the climbing variety should be in every collection; though neither are very productive.
247. Diana.	H.R.	W. Paul, 1874. Deep pink.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
248. D i n g e e-C o- nard, mod.	H.R.	E Verdier, 1875. Violet-crimson, illumined with red, medium size, compact.
249. Dr. A n d r y, free.	H.R.	E. Verdier, 1864. Rosy-crimson, large, semi-cupped flowers, double, sometimes full, fades badly; foliage, large and glossy; wood moderately smooth; thorns, large and red. A better rose in England than in this country.
250. Doctor Arnal, dwf.	H.R.	Rœser, 1848. Red, shaded with crimson; medium or small size; a free bloomer, subject to mildew.
251. Doctor Berthet.	T.	Pernet, 1878. Pale rose, deeper in centre.
252. Doctor Chalus, free.	H.R.	Touvais, 1871. Vermilion, shaded with crimson; large, double or full, fragrant; a good seed-bearer.
253. Doctor Hénon, dwf.	H.R.	Lille, 1855. White, centre shaded, medium size, full; often malformed, and subject to mildew. Belongs to the old Portland group.
254. Doctor Hogg, free.	H.R.	Laxton, 1880. (Sent out by George Paul.) Deep violet-red, medium size.
255. Doctor Hooker, free.	H.R.	G. Paul, 1876. Raised from <i>Duke of Edinburgh</i> . Crimson, with a shade of velvety purple.
256. Doctor Kane, vig. or free.	N.	Pentland, 1856. Sulphur-yellow, large, fine flowers; difficult to grow well.
257. Doctor Marx, mod.	H.R.	Laffay, 1842. Red, tinged with violet; a bad shade.
258. Doctor Sewell,	H.R.	Turner, 1879. Bright crimson, tinged with purple, large, full. A good rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
259. Double Margined Hep, free.	Dam.	White, tinged with pink, flat form, full; good.
260. Douglass, free.	Beng.	V. Verdier, 1848. Crimson, medium size, double, fine in the bud. A valuable variety for house-culture.
261. Duarte d'Oliveira, vig.	N.	Brassac, 1880. Raised from <i>Ophirie</i> \times <i>Rêve d'Or</i> . Salmon-rose, coppery at base, medium size, full.
262. Duc d'Aumale, free. (<i>General Duc d'Aumale.</i>)	H.R.	E. Verdier, 1875. Crimson; a good sort, not unlike <i>Maurice Bernardin</i> .
263. Duc de Cazes, free.	H.R.	Touvais, 1860. Violet-crimson, not a pure shade; double; numerous stout thorns.
264. Duc de Magenta, free.	T.	Margottin, 1859. Flesh, shaded with fawn, thick petals, full. A large, good tea.
265. Duc de Montpensier, free.	H.R.	Lévêque, 1876. Red, shaded with crimson; a good sort.
266. Duc de Rohan, free.	H.R.	Lévêque, 1861. Vermilion, large, well formed.
267. Ducher, free.	Beng.	Ducher, 1869. Pure white, well formed.
268. Duchesse de Cambacères, vig.	H.R.	Fontaine, 1854. Lilac rose, impure color; double.
269. Duchesse de Caylus, mod.	H.R.	C. Verdier, 1864. Rosy-crimson, large, double.
270. Duchesse de Chartres	H.R.	E. Verdier, 1875. Bright rose.
271. Duchesse d'Is-trie, mod.	M.	Portemer, 1857. Rose color, not valuable.
272. Duchesse de Morny, vig.	H.Ch.	E. Verdier, 1863. Bright rose; erect growth; mildew.
273. Duchesse d'Orléans, free.	H.R.	Quetier, 1852. Blush, large, full; often opens badly, and is subject to mildew.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
274. Duchesse de Thuringe, free.	B.	Guillot-père, 1847. White, slightly tinged with lilac; a free bloomer.
275. Duchesse de Vallombrosa, mod.	H.R.	Schwartz, 1875. Raised from <i>Jules Margottin</i> . Pink, generally opens badly; not valuable.
276. Duchesse de Vallombrosa.	T.	Nabonnand, 1879. Coppery-red, distinct.
277. Duchess of Connaught, dwf.	H.T.	Bennett, 1879. Raised from <i>President</i> × <i>Duchesse de Vallombrosa</i> (H.R.) Silvery-rose; of large, globular form; full, highly scented. Resembles <i>La France</i> , but the flowers are more circular, the foliage larger and better. It retains its globular form, the petals recurving to a less extent; but <i>La France</i> is, notwithstanding, much the better sort.
278. Duchess of Bedford, mod.	H.R.	R. B. Postans, 1879. (Sent out by W. Paul & Son.) Belongs to the <i>Victor Verdier</i> type. Cherry-red; not very promising.
279. Duchess of Edinburgh, mod.	H.R.	Dunand, 1874. (Given by the raiser to Schwartz, by him sold to Henry Bennett, who sent it out.) Belongs to <i>Jules Margottin</i> type. Pink, not valuable.
280. Duchess of Edinburgh, mod.	Beng.	Nabonnand, 1874. (Sent out by Veitch). Raised from <i>Souvenir du David d'Angers</i> . A Bengal with Tea blood. Crimson, turning lighter as the bud expands; of good size, moderately full.
281. Duchess of Norfolk, free.	H.R.	Margottin, 1861. (Sent out by Wood.) Rosy-red, medium

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
282. Duchess of Sutherland, vig.	H.R.	size, cup-shaped ; a shy bloomer, and not valuable. Laffay, 1840. Rosy-pink, large, full ; shy in autumn.
283. Duchess of Westminster, mod. or dwf.	H.T.	Bennett, 1879. Raised from <i>President</i> × <i>Marquise de Castellane</i> . Satiny-pink, shaded with rose, sometimes the color is carmine-rose ; large, full flowers, with a faint Tea odor. The flowers are apt to be irregular and not of good finish, the buds are generally good. Subject to mildew.
284. Duke of Albany.	H.R.	W. Paul & Son, 1882. Crimson.
285. Duke of Connaught, mod.	H.R.	G. Paul, 1875. Deep, velvety-crimson, with a fiery flush ; medium size, full, well formed ; burns badly, very shy in autumn. In England this is one of the finest dark roses ; we have seen it in grand form at the raiser's, but it has no value for out-door culture in this country,
286. Duke of Connaught, dwf. or mod.	H.T.	Bennett, 1879. Raised from <i>President</i> × <i>Louis Van Houtte</i> . Rosy-crimson, large, full, well formed, good in bud, almost without fragrance ; the buds do not always open. A fine rose when well grown, but it will never be useful for ordinary cultivators.
287. Duke of Edinburgh, vig.	H.R.	G. Paul, 1868. Raised from <i>General Jacqueminot</i> . Bright crimson, large, double flowers, little fragrance ; foliage large and attractive. Occasionally this is very fine early

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
288. Duke of Teck, vig.	H.R.	in the season, but the flowers lack substance and durability of color. It is more shy in the autumn than the parent; not to be commended for general culture. G. Paul, 1880. Raised from <i>Duke of Edinburgh</i> . Very bright crimson; not well tested in this country; we were much pleased with it as seen at Cheshunt.
289. Duke of Wellington, mod.	H.R.	Granger, 1864. Red, shaded with crimson.
290. <i>Dumnaeus</i> , mod.	H.R.	Moreau-Robert, 1880. Raised from <i>Countess of Oxford</i> . Carmine-red.
291. Dupetit Thouars, vig.	B.	Portemer, 1844. Raised from <i>Emile Courtier</i> . Deep red, shaded with crimson; hardy, non-autumnal.
292. Dupuy Jamain, free.	H.R.	Jamain, 1868. Cherry-red, with a shade of crimson; large, double, well formed, fragrant; a good seed-bearer. Were this more full, it would be a rose of the first rank.
—, Du Roi.		See Rose du Roi.
293. Earl of Beaconsfield, dwf.	H.R.	Christy, 1880. (Sent out by G. Paul.) Cherry-rose, medium size, beautiful form.
294. Eclatante, free.	M.	Cherry rose, buds of good form, well mossed; darker than the <i>Common</i> or <i>Prolific</i> , one of the best. Why this rose has passed out of cultivation we do not know; there are but three in the class as good.
295. Edmund Wood, mod.	H.R.	E. Verdier, 1875. Red, flowering in corymbs; short, reddish wood.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
296. Edward André, free.	H.R.	E. Verdier, 1879. Red, tinged with purple.
297. Edward Desfossés, free.	B.	Renard-Courtier, 1840. Carmine-rose, medium size, double, or nearly full, fragrant. An excellent rose.
298. Edward Dufour, free.	H.R.	Lévêque, 1877. Raised from <i>Annie Wood</i> . Crimson, tinged with purple.
299. Edward Jesse, free.	H.R.	Deep rose, small, double.
300. Edward Moren, vig.	H.R.	Granger, 1868. (Sent out by Charles Lee.) Raised from <i>Jules Margottin</i> . Deep cherry-rose, large, flat flowers, very full; sometimes comes with a green centre. A fine sort when well grown.
301. Edward Pyrnært, free.	H.R.	Schwartz, 1877. Raised from <i>An'oine Ducher</i> . Red, shaded with crimson-purple, a bad color; medium or small size, fragrant.
302. Egeria, dwf. or mod.	H.R.	Schwartz, 1878. (Sent out by Bennett.) Raised from <i>Jules Margottin</i> . Salmon-pink, a very lovely shade; medium size, full, semi-globular; not of good constitution. For experienced cultivators this is a superb sort.
303. Elie Morel, mod.	H.R.	Boucharlat, 1867. (Sent out by Liabaud.) Lilac-rose, full, fragrant; green wood, with occasional red spines; the character of its growth is not pleasing. Shy in autumn.
304. Elise Flory, [mod.]	Beng.	Guillot-père, 1852. Shaded rose.
305. Elise Sauvage, dwf. (<i>L'enfant trouvé</i> .)	T.	Mieliez, 1818. Orange-yellow, medium size, full.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
306. Elise Boelle, mod. or dwf.	H.N.	Guillot-père, 1869. White, delicately tinged with pink, medium size, full, beautiful circular form; light green wood, armed with numerous small spines. A lovely rose.
307. Elizabeth Vigneron, free.	H.R.	Vigneron, 1865. (Sent out by W. Paul.) Raised from <i>Duchess of Sutherland</i> . Bright pink, fragrant; an inferior <i>Miss Hassard</i> .
308. Emile Cour- tier, free.	B.	Portemer. Bright red, a good seed-bearer.
309. Emilia Plan- tier, free.	H.N.	Schwartz, 1878. Yellowish-white, semi-double, sometimes double, ill formed; utterly worthless.
310. Emily Haus- bourg, free.	H.Ch	Lévêque, 1868. Lilac-rose, a muddy shade; large, full, globular form, fragrant. Its bad color destroys its usefulness.
311. Emily Laxton.	H.R.	Laxton, 1877. (Sent out by G. Paul.) Belongs to <i>Jules Margottin</i> type. Cherry-rose, good in the bud.
312. Empereur de Maroc, mod.	H.R.	Guinoiseau, 1858. (Sent out by E. Verdier) Belongs to <i>Giant of Battles</i> type. Crimson, tinged with purple.
313. Empereur de Brésil.	H.R.	Soupert & Notting, 1880. Magenta-red.
314. Empress of In- dia, free.	H.R.	Laxton, 1876. (Sent out by G. Paul.) Raised from <i>Triomphe des Beaux Arts</i> . Brownish-crimson, medium size, globular, fragrant; dark green foliage, spines light colored. Many of the buds do not open well, and it is shy in the autumn; a splendid sort when perfect.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
315. Ernest Prince.	H.R.	Ducher & Sœur, 1881. Raised from <i>Antoine Ducher</i> . Red, shaded in centre.
316. Etienne Dupuy, vig.	H.Ch.	Levet, 1873. Light rose color, medium size, cupped shape; thick shoots, nearly smooth; tough foliage.
317. Etienne Levet, mod.	H.R.	Levet, 1871. Raised from <i>Victor Verdier</i> . Carmine-red; one of the finest in the type.
318. Etna, mod.	M.	Laffay, 1845. Crimson, tinged with purple. Not of first rank.
319. Etoile de Lyon.	T.	Guillot, 1881. Deep yellow; a rival for <i>Perle des Jardins</i> .
320. Eugène Appert, dwf. or mod.	H.R.	Trouillard, 1859. Belongs to <i>Giant of Battles</i> type. Velvety-maroon, shaded with deep crimson. A rose of superb color, but with all the family failings.
321. Eugène Beauharnais, mod.	Beng.	Moreau, 1865. Crimson; a good sort, but inferior to <i>Agrippina</i> .
322. Eugénie Guinoiseau, mod.	M.	Guinoiseau, 1865. Red, shaded with violet; very subject to mildew; poor.
323. Eugène Pirole, vig. (<i>Admiral Rigney</i> .)	N.	Red, tinged with crimson; nearly hardy; not of high quality.
324. Eugénie Verdier, dwf.	H.R.	Guillot-fils, 1869. Raised from <i>Victor Verdier</i> . Silvery-pink, tinged with fawn; a lovely shade; fine in the bud. One of the best of the type.
325. Evêque de Nîmes, mod.	H.R.	Damaizin, 1856. Raised from <i>Giant of Battles</i> . Crimson, illumined with fiery red; very tender and delicate.
326. Exposition de Brie.	H.R.	Granger, 1865. The same as <i>Maurice Bernardin</i> .
327. Fabvier.	Beng.	Laffay. Rosy-crimson, semi-double.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
328. Felicien David.	H.R.	E. Verdier, 1872. Deep rose, tinged with purple.
329. Félicité Perpétuelle, vig.	Ev.	Jacques, 1828. Creamy-white, small, full. Must be sparingly pruned.
330. Félix Genero.	H.R.	Damaizin, 1866. Violet-rose.
331. Fellemberg, vig.	N.	Rosy - crimson. Like <i>Eugène Pirolle</i> .
332. Ferdinand Chaffolte.	H.R.	Pernet, 1879. Reddish-crimson, not well formed, without fragrance; does not seem an addition of merit.
333. Ferdinand de Lesseps, free.	H.R.	E. Verdier, 1869. See <i>Maurice Bernardin</i> .
334. Firebrand, dwf.	H.R.	Labruyère, 1873. (Sent out by W. Paul.) Crimson, medium size, double, good, circular form, cup-shaped, fragrant; shy in autumn. Not unlike <i>André Leroy</i> .
335. Fisher-Holmes, free.	H.R.	E. Verdier, 1865. May be briefly described as an improved <i>General Jacqueminot</i> ; the flowers are fuller and more freely produced. A very valuable sort.
336. Flag of the Union.	T.	Described by Hallock & Thorpe as "a sport from <i>Bon Silène</i> , being a fac-simile of the parent in habit of growth and freedom of bloom; the flowers are equal in size to <i>Bon Silène</i> . The markings are not quite so distinct as in <i>American Banner</i> , i.e. the predominant color is rose instead of white, but each flower is regularly marked; it is a very pleasing variety."
337. Flavescens, mod. (<i>Yellow Tea</i> .)	T.	Introduced from China about 1824. Light yellow, long, fine buds, fragrant. This has been

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		the parent of many of our finest yellow Teas.
338. Flora Nabonnand, mod.	T.	Nabonnand, 1877. Canary-yellow, edged with rose.
339. Fontenelle, mod.	M.	Vibert, 1849. Rose color, not mossy; poor.
340. Fontenelle.	H.R.	Moreau-Robert, 1877. Carmine-red.
341. Fortunei, vig.	Bk.	Introduced by Fortune, from China, in 1850. Blush-white.
342. Fortune's Double Yellow, vig.	Bk.	Introduced by Fortune, from China, in 1845. Bronzed yellow.
343. François Arago, mod.	H.R.	Trouillard, 1859. Belongs to <i>Giant of Battles</i> type. Velvety-maroon, illumined with fiery red. Resembles <i>Lord Raglan</i> .
344. François Courtin, free.	H.R.	E. Verdier, 1873. Cherry-red, shaded with crimson, semi-globular, full, somewhat fragrant; thorns yellowish red.
345. François Fontaine, mod.	H.R.	C. Fontaine, 1867. Rosy-crimson, fine, globular form, in the style of <i>Sénateur Vaisse</i> .
346. François Gaulain.	H.R.	Schwartz, 1878. Deep purplish crimson.
347. François Hérincq.	H.R.	E. Verdier, 1878. Red, globular form.
348. François Lacharme, free.	H.R.	V. Verdier, 1861. Rosy-carmine, tinged with deep violet-red.
349. François Louvat.	H.R.	Violet-red, globular form.
350. François Levet.	H.R.	A. Levet, 1880. Cherry-rose, medium size; style of <i>Paul Verdier</i> .
351. François Michelon, free.	H.R.	Levet, 1871. Raised from <i>La Reine</i> . Deep rose, tinged with lilac, very large, full, of fine, globular form; fragrant, free-blooming. The wood and

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		foliage are light-green, erect habit, thorns not numerous, wood long jointed, the foliage somewhat crimped. A very distinct choice sort; excelling in June and July, when other kinds are past their prime, and also in the autumn.
352. François Premier, mod.	H.R.	Trouillard, 1858. Red, shaded with crimson.
353. François Treyve.	H.R.	Liabaud, 1866. Fiery-red, globular form.
354. Gabriel Tourner, free.	H.R.	Levet, 1876. In habit like <i>Pæonia</i> . Rosy-red, large, globular flowers, free in autumn.
355. Gaston Lévêque, free or mod.	H.R.	Lévêque, 1878. Bright rosy-crimson, large, full; spines of yellowish-green.
356. Gem of the Prairies, free.	P.	A. Burgess, 1865. Believed to be from <i>Queen of Paris</i> × <i>Madame Laffay</i> . Rosy-red. Occasionally blotched with white; large, flat flowers, slightly fragrant.
— General Duc d'Aumale.		See Duc d'Aumale.
357. General Jacqueminot, vig.	H.Ch.	Laffay, 1846. Purple-crimson.
358. General Jacqueminot, vig.	H.R.	Rouselet, 1853. A probable seedling from the old Hybrid China <i>Gloire des Rosomanes</i> . Brilliant crimson, not full, but large and extremely effective; fragrant, and of excellent, hardy habit.
359. General Simpson, free.	H.R.	Ducher, 1855. Cherry-rose medium size, pretty form; erect growth, tender.
360. General Tartas, free.	T.	Bernède. Deep, mottled rose, sometimes tinged with buff;

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
361. General Von Moltke, mod.	H.R.	beautiful buds, good habit. An excellent rose. Bell & Son, 1873. Raised from <i>Charles Lefebvre</i> . Same style as the parent, but much inferior to it.
362. General Washington, mod.	H.R.	Granger, 1861. Raised from <i>Triomphe de l'Exposition</i> . Red, shaded with crimson, large, very full, flat form; the flowers are often malformed, greatly lessening its value. A profuse bloomer, and when in perfection, a very fine sort.
363. Génie de Châteaubriand, free or mod.	H.R.	Oudin. Violet-rose, very large, full, flat, or quartered shape. A bad colored rose.
364. George Baker.	H.R.	G. Paul, 1881. "Pure lake, shaded with cerise, almost mildew proof; in the way of <i>Dupuy Jamain</i> , but distinct."
365. George Moreau, vig.	H.R.	Moreau-Robert, 1880. Raised from <i>Paul Neyron</i> . Bright red, shaded with vermillion, very large, full, opening well.
366. George Peabody, mod.	B.	J. Pentland, 1857. Probably from <i>Paul Joseph</i> . Rosy-crimson, medium or small size, full, well formed, fragrant. One of the best Bourbons, highly commended.
367. George Prince, free or vig.	H.R.	V. Verdier, 1864. Rosy-crimson, quite smooth wood; a free blooming, excellent rose.
368. George the Fourth, vig.	H.Ch.	Rivers. Crimson, semi-double or double; no longer of any value.
369. George Vibert, free.	Prov.	Robert, 1853. Rosy-purple, striped with white, medium size.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
370. Gérard Des- bois, vig.	T.	Bright red, of good form; one of the hardiest, and most useful in the class.
371. Giant of Bat- tles, dwf.	H.R.	Nérard, 1846. Sent out by Guillo- lot-père. Deep, fiery crimson, very brilliant and rich when first opening, but quickly fades, medium or small size, full, well formed, handsome, Bourbon-like foliage, very lia- ble to mildew. This variety and all of its type are of deli- cate constitution.
372. Gigantèsque, free.	T.	Odier, 1845. Deep rose, some- times mottled; often fine, but apt to come malformed or somewhat coarse.
373. Gloire de Bor- deaux, vig.	Cl.T.	Lartoy, 1861. Raised from <i>Gloire de Dijon</i> . Rose color, tinged with fawn.
374. Gloire de Bourg-la- Reine, mod.	H.R.	Margottin, 1879. Vivid red, dou- ble.
375. Gloire de Dijon, vig.	Cl.T.	Jacotot, 1853. In color a com- bination of rose, salmon and yellow; flowers very large, very full, good globular form, the outer petals inclined to fade. A very useful rose, prob- ably the hardiest of the Teas.
376. Gloire de Du- cher, vig.	H.R.	Ducher, 1864. Crimson-purple, large, very full, subject to mil- dew. If the color were perma- nent, this would be a good kind.
—, Gloire de Pa- ris.	H.R.	A deceit. Sent out as a new sort; it is but <i>Anne de Dies- bach</i> .
377. Gloire des Ro- somanes, free.	B.	Vibert. Brilliant crimson, semi- double.
378. Gloire de San-	H.R.	Ducher, 1859. Raised from <i>Gen-</i>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
tenay, free or mod.		<i>eral Jacqueminot</i> . Crimson, tinged with violet; out of date.
379. Gloire de Vi- try, free.	H.R.	Masson, 1855. Raised from <i>La Reine</i> . Bright rose.
380. Glory of Ches- hunt, vig.	H.R.	G. Paul, 1880. Raised from <i>Charles Lefebvre</i> . Rich crim- son, double, very effective.
381. Glory of Moss- es, mod.	M.	Vibert, 1852. Pale rose, very large, full, flat form; not at- tractive in the bud; the foli- age is very large.
382. Glory of Wal- tham.	H.Cl.	Vigneron, 1865. (Sent out by W. Paul.) Crimson, double, fragrant.
383. Goubault, free or mod.	T.	Goubault, 1843. Rose, tinged with salmon; resembles <i>Bon Silène</i> , but inferior to it.
384. Gracilis, free. (<i>Prolific</i> .)	M.	Deep pink buds, surrounded with delicate, fringe-like moss. The most beautiful of all the moss roses.
385. Great Western, free.	H.Ch.	Laffay. Red, shaded with crim- son, double, fragrant; poor.
386. Gréville, vig. (<i>Seven Sisters</i> .)	Mult.	Blush, tinged and striped with various shades, small or me- dium size; a tender variety of no value.
387. Guillaume Gil- lemont.	H.R.	Schwartz, 1880. Raised from <i>Madame Charles Wood</i> . Rosy- carmine.
388. Gustave Thier- ry.	H.R.	Oger, 1880. Cherry-red.
389. Harrison Weir, free or mod.	H.R.	Turner, 1879. Raised from <i>Charles Lefebvre</i> × <i>Xavier Olibo</i> . Velvety crimson, bright- ened with scarlet.
390. Harrison's Yellow, free.	A.	Harrison, 1830. Golden yellow, medium size, semi-double; generally has nine leaflets, a

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		freer bloomer than <i>Persian Yellow</i> . This is believed to be a hybrid between the common Austrian and a Scotch rose.
391. Helen Paul.	H.R.	Lacharme, 1881. Raised from <i>Victor Verdier</i> × <i>Sombreuil</i> . White, sometimes shaded with pink; large globular flowers.
392. Helvetia.	T.	Ducher, 1873. Pink, tinged with fawn.
393. Henri Lecoq, dwf.	T.	Ducher, 1871. Rosy-flesh, small, beautiful buds; delicate habit.
394. Henri Ledé- chaux, dwf.	H.R.	Ledéchaux, 1868. Belongs to <i>Victor Verdier</i> type. Carmine-rose.
395. Henri Martin.	M.	Portemer, 1862. Red, not valuable.
396. Henry Bennett, mod.	H.R.	Lacharme, 1875. Raised from <i>Charles Lefebvre</i> . Crimson, medium size, mildews, and burns badly; shy in autumn, and of no value.
397. Hermosa, mod. (<i>Armosa</i> , or <i>Setina</i> .)	B.	Marcheseau, 1840. Bright rose, medium or small size, double; constantly in flower, bushy habit.
398. Hippolyte Ja- main, mod.	H.R.	Lacharme, 1874. Belongs to <i>Victor Verdier</i> type. Carmine-red, well built flowers; the foliage when young has a deeper shade of red than is seen in any other sort, and is also the handsomest. We find this the hardiest of the type.
399. Homer, vig.	T.	Moreau-Robert, 1859. Salmon-rose, often richly mottled; a free bloomer, moderately hardy, best in the open air; the buds are very beautiful,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
400. Hon. George Bancroft, dwf. or mod.	H.T.	<p>even though of variable shades. Certainly one of the most useful tea roses.</p> <p>Bennett, 1879. From <i>Madame de St. Joseph</i> × <i>Lord Macaulay</i>. Red, shaded with violet-crimson, large, full flowers, and good, pointed buds; often comes malformed; highly scented, a combination of the perfumes found in the parent varieties; the wood is nearly smooth, the foliage is large, dark, and handsome. The color is not deep enough, and is too sullied to make this of value for winter-forcing.</p>
401. Horace Vernet, dwf. or mod.	H.R.	<p>Guillot-fils, 1866. Crimson, illumined with scarlet, large, double; of beautiful wavy outline; nearly smooth wood, of delicate constitution. Few roses have such lovely form as this.</p>
402. <i>Hortensia</i> , free.	T.	<p>Ducher, 1871. Rose color, back of petals a washed-out pink; a coarse, poor sort.</p>
403. <i>Hyménée</i> , mod.	T.	<p>Laffay. Pale sulphur-yellow, large, full.</p>
404. <i>Ida</i> , mod.	T.	<p>Madame Ducher, 1875. Pale yellow, double.</p>
405. <i>Impératrice Eugénie</i> , free.	Beng	<p>Béluzé, 1855. Silvery-rose, medium size, full, fragrant; a good variety, and would be very useful had we not <i>La France</i>. Subject to mildew; shows Bourbon character.</p>
406. <i>Innocente Pirola</i> , mod.	T.	<p>Madame Ducher, 1878. Clouded white, medium size, full, well-formed buds. In the style of</p>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		<i>Niphetos</i> , but is inferior to it in all respects save mere vigor of growth.
407. Isabella (Bella), mod. or free-	T.	Cels, 1838. Creamy-white ; once a popular sort.
408. Isabella Gray, free.	N.	Andrew Gray, 1854. Raised from <i>Cloth of Gold</i> . Golden yellow ; has the good and bad qualities of the parent.
409. Isabella Sprunt, free.	T.	Rev. James M. Sprunt, D.D., 1865. (Sent out by Isaac Buchanan.) A sport from <i>Safrano</i> . Sulphur yellow, very beautiful in the bud. Well known as one of the most useful kinds.
[free.		
410. Jacques Lafitte,	H.R.	Vibert, 1846. Rosy-crimson.
411. James Sprunt, vig.	Beng.	Rev. James Sprunt, 1858. (Sent out by P. Henderson.) A climbing sport from <i>Agrippina</i> . Crimson, the same color as the parent sort, but the flowers are fuller and larger. It is not so free flowering as <i>Agrippina</i> , but a desirable rose.
412. James Veitch, dwf.	P.M.	E. Verdier, 1865. Violet-crimson, a sullied color, medium or large size, poor shape ; blooms freely, very subject to mildew.
Jaune Desprez.	N.	See Desprez.
413. Jaune d'Or, dwf.	T.	Oger, 1864. Coppery-yellow, medium size, full, very delicate habit. One of the sweetest in the class.
414. Jean Bodin, free.	M.	Vibert, 1847. Light rose, quartered shape, fragrant, not mossy.
415. Jean Brosse, mod.	H.R.	Ducher, 1867. Rose color, medium size, cup form.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
416. Jean Cherpin, free.	H.R.	Liabaud, 1865. Plum color, double, often semi-double, inclined to burn; fragrant and a fine seed parent. One of the richest shades of color yet produced.
417. Jean Dalmais, mod.	H.R.	Ducher, 1873. Rose, tinged with violet, globular, fragrant.
418. Jean Ducher, free or mod.	T.	Madame Ducher, 1874. Bronzed-rose, large, very full, globular form; not to be depended on, but very beautiful when well grown.
419. Jean Goujon, vig.	H.Ch.	Margottin, 1862. Red, large or very large, full, nearly smooth wood; of second quality.
420. Jean Hardy.	N.	Hardy, 1859. Golden yellow, medium size, full; an inferior <i>Isabella Gray</i> .
421. Jean Lambert, vig.	H.R.	E. Verdier, 1866. Deep red, very large, full, flat form.
422. Jean Liabaud, free.	H.R.	Liabaud, 1875. A seedling from <i>Baron de Bonstetten</i> . Crimson-maroon, illumined with scarlet, large, full; a lovely rose, but shy in the autumn.
423. Jean Lorthois, free or vig.	T.	Madame Ducher, 1879. Rose, reverse of the petals silvery pink.
424. Jean Monford, vig.	M.	Robert, 1852. Rose color, quite pretty in bud, subject to mildew, not free.
425. Jean Pernet, free.	T.	Pernet, 1867. Light yellow, suffused with salmon, beautiful buds; a fine tea, but is now surpassed by <i>Perle des Jardins</i> .
426. Jean Sisley, mod.	H.T.	Bennett, 1879. Raised from <i>President</i> × <i>Emily Hausburgh</i> . Lilac-rose, large, very full,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
427. Jean Soupert. mod. or free.	H.R.	without fragrance; very subject to mildew. The color is bad, and the buds rarely open well; it is entirely worthless. Lacharme, 1975. Crimson-maroon, in the way of <i>Jean Liabaud</i> ; dark green foliage, with many thorns; not free in the autumn.
428. Jeanne d'Arc, vig.	N.	V. Verdier, 1848. White, an inferior <i>Lamarque</i> .
429. Joasine Hanet vig.	H.R.	Belongs to the old Portland group. Deep rose, tinged with violet, medium size, full, quartered shape; fragrant, very hardy, a profuse bloomer. The color and form are bad, and destroy its usefulness.
430. John Bright, mod.	H.R.	G. Paul, 1878. Bright crimson, medium size.
431. John Cranston.	M.	E. Verdier, 1862. Violet-red, medium size.
✓ 432. John Hopper, free.	H.R.	Ward, 1862. From <i>Fules Margottin</i> × <i>Madame Vidot</i> . Bright rose, with carmine centre, large and full, semi-globular; light red thorns, stout bushy growth. A free blooming, standard sort.
433. John Keynes, free.	H.R.	E. Verdier, 1865. Red, shaded with maroon.
434 John Saul, free.	H.R.	Madame Ducher, 1878. Raised from <i>Antoine Ducher</i> . Red, back of the petals carmine, semi-globular.
435. John Stuart Mill, free.	H.R.	Turner, 1875. Raised from <i>Beauty of Waltham</i> . Rosy-crimson, large, full, or double; does not bloom until late; shy in the autumn.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
436. Joseph Bernacchi, vig.	N.	Madame Ducher, 1878. Yellowish-white, pale yellow at centre.
437. Jules Chrétien, mod.	H R	Schwartz, 1878. Belongs to the <i>Prince Camille</i> type. Crimson, tinged with purple.
438. Jules Chrétien, free.	H.R.	Damaizin, 1870. Bright rose ; not valuable.
439. Jules Finger, free.	T.	Madame Ducher, 1879. From <i>Catherine Mermet</i> × <i>Madame de Tartas</i> . Red, with a silvery lustre ; a promising sort.
440. Jules Jurgensen.	B.	Schwartz, 1879. Magenta-rose.
441. Jules Margottin, free.	H.R.	Margottin, 1853. Probably from <i>La Reine</i> . Carmine rose, large, full, somewhat flat, slight fragrance ; five to seven leaflets, foliage light green, and somewhat crimped ; wood armed with dark red thorns ; free flowering and hardy.
442. Julie Mansais, mod.	T.	Creamy-white, sweet scented, beautiful ; delicate in habit.
443. Julie Touvais, mod.	H.R.	Touvais, 1868. Satiny-pink, very large, full ; fine, but unreliable.
444. Julius Finger, mod.	H.T.	Lacharme, 1879. From <i>Victor Verdier</i> × <i>Sombreuil</i> . Salmon-pink, in the style of <i>Captain Christy</i> ; a promising sort.
445. King of the Prairies, vig.	P.	Feast, 1843. Pale rose.
446. King's Acre,	H.R.	Cranston, 1864. Vermilion.
447. La Brillante, mod.	H.R.	V. Verdier, 1862. Bright crimson, a clear shade, large, double, fragrant ; a free bloomer.
448. La Fontaine, frec.	H.Ch.	Guinoisseau, 1855. Red tinged with violet.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
449. La France, mod.	H.T.	Guillot-fils, 1867. From seed of a Tea rose. Silvery-rose, changing to pink, very large, full, globular; a most constant bloomer, and the sweetest of all roses. If the buds remain firm, by pressing gently the point and blowing into the centre, the flowers will, almost invariably, expand. An invaluable sort.
450. La Grandeur, free or vig.	T.	Nabonnand, 1877. Violet-rose, very large, full.
451. La Jonquille, mod.	T.	Ducher, 1871. Raised from <i>Lamarque</i> . Jonquil-yellow, semi-double, sometimes single; medium or small size.
452. La Lune, mod.	T.	Nabonnand, 1878. Creamy-yellow, deeper colored in centre, medium size, large petals, semi-double.
453. La Motte Sanguin, mod.	H.R.	Vigneron, 1869. Carmine-red, large or very large.
454. La Nuancée, mod.	T.	Guillot-fils, 1875. Blush, tinged with fawn, medium size, full.
455. La Princesse Vera, free.	T.	Nabonnand, 1878. Flesh, bordered with coppery-rose, full, well formed; a distinct good sort.
456. La Reine, free or vig.	H.R.	Laffay, 1843. Glossy-rose, large, full, semi-globular form, somewhat fragrant; the foliage slightly crimped, five to seven leaflets. A very hardy, useful rose, though no longer the queen.
457. La Rosière, free.	H.R.	Damaizin, 1874. Belongs to the <i>Prince Camille</i> type. Crimson, the flowers are identical in color and form with <i>Prince</i>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		<i>Camille</i> , but seem a little fuller, and are more freely produced, the habit of growth, too, seems somewhat stronger; it may usurp the place of its rival.
458. La Saumonée, vig.	H.Cl.	Margottin, 1877. Belongs to the <i>Jules Margottin</i> type. Salmon-rose, medium size; non-autumnal.
459. La Souveraine, vig.	H.R.	E. Verdier, 1874. Rose color, large flowers, semi-double or double, cupped form; inferior.
460. La Sylphide, free.	T.	Laffay. Blush, with fawn centre, very large, double.
461. La Tulipe, mod.	T.	Ducher, 1870. Creamy-white, tinted with carmine, semi-double.
462. La Ville de Bruxelles, free.	Dam.	Vibert, 1836. Rose color, large, full, flat; branching habit.
463. Lady Emily Peel, mod. or free.	H.N.	Lacharme, 1862. From <i>Blanche Lafitte</i> × <i>Sappho</i> . White, tinged with blush.
464. Lady Fordwick, free.	H.Ch.	Laffay, 1838. Deep rose, cup-shaped.
465. Lady Sheffield.	H.R.	W. Paul & Son, 1881. Cherry-red.
466. Lady Stuart, free.	H.Ch.	Portemer, 1852. Pink, changing to blush; five to seven-leaflets.
467. Lady Warren-der.	Beng.	See Clara Sylvain.
468. Lælia.	H.R.	Crozy, 1857. See Louise Peyronny.
469 Lamarque, vig.	N.	Maréchal, 1830. White, with sulphur centre, sometimes pure white, very large, full, somewhat fragrant, generally seven leaflets. A superb climbing rose, quite too much neglected.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
470. Lamarque à fleurs jaunes, free.	N.	Ducher, 1871. Pale yellow, medium size, in the style of the former sort, but inferior in all respects.
471. Laneii.	M.	Laffay, 1854. (Sent out by Lane & Son.) Red, good foliage, with five leaflets; not subject to mildew. Propagates with great difficulty from cuttings.
472. L' Eblouis- sante, mod.	H.R.	Touvais, 1861. Rosy-crimson, very large, double.
473. L'Espérance, free.	H.R.	Fontaine, 1871. Cherry-red, large, full, flat form, fragrant.
474. L'Enfant du Mont-Carmel, vig.	H.R.	Cherpin, 1851. (Sent out by Ducher.) Violet-rose, a muddy shade, large, full, flat form, fragrant, red spines; inclined to mildew.
475. Le Havre, mod.	H.R.	Eude, 1871. Vermilion, beautifully formed.
476. Le Mont Blanc, mod.	T.	Ducher, 1869. Pale lemon-yellow, growing lighter as the flowers expand; good in the bud.
477. Le Nankin, mod. or dwf.	T.	Ducher, 1871. Pale yellow, shaded coppery-yellow, pretty in the bud state; rather delicate habit.
478. Le Pactole, dwf. or mod.	T.	Madame Pean. From <i>Lamarque</i> × <i>Yellow Tea</i> . Very pale yellow, beautiful buds.
479. Le Rhône, free or mod.	H.R.	Guillot-fils, 1862. Raised from <i>General Jacqueminot</i> . Vermilion, tinged with crimson, large, well formed.
480. Leda. (<i>Peintea</i> <i>Damask</i>).	Dam.	Blush, edged with lake.
481. Léon Renault. free or vig.	H.R.	Madame Ledéchaux, 1878. Cherry-red, very large, full; promises well.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
482. Léopold Haus- burgh, free.	H. R.	Granger, 1863. Belongs to <i>Jacqueminot</i> type. Deep violet-red, a bad color.
483. Léopold Premier, free.	H. R.	Vanassche, 1863. Belongs to <i>Jacqueminot</i> type. Deep red shaded crimson, thorns not very numerous; a good sort but not free in the autumn.
484. Letty Coles, free.	T.	Keynes, 1876. A sport from <i>Madame Willermoz</i> . White, with pink centre.
485. Leveson Gower, mod.	B.	Béluzé, 1846. Deep rose, tinged with salmon, the flowers are of the same character as <i>Malmaison</i> .
486. Lion des Combats, free or mod.	H. R.	Lartay, 1851. Violet-rose, double, subject to mildew; worthless.
487. Little Gem, dwf.	M.	W. Paul, 1880. Crimson, very small, full; a miniature sort.
488. Lord Beaconsfield.	H. R.	Schwartz, 1878. (Sent out by Bennett.) Crimson, large, well formed.
489. Lord Clyde, mod.	H. R.	G. Paul, 1863. Rosy-crimson, large, double; subject to mildew.
490. Lord Macaulay, free or mod.	H. R.	1863. (Sent out by W. Paul.) Fiery-crimson, much the color seen in <i>Charles Lefebvre</i> , large, double, well formed, fragrant; this is still a good rose.
491. Lord Palmerston, free.	H. R.	Margottin, 1858. Carmine-red, tinged with vermilion, double, well formed; bushy habit, light green wood and foliage, a few light-colored spines. A good garden rose.
492. Lord Raglan, mod.	H. R.	Guillot-père, 1854. Raised from <i>Giant of Battles</i> . Burgundy crimson, a lovely shade; tender and shy in autumn.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
493. Louis XIV., dwf.	H.R.	Guillot-fils, 1859. Raised from <i>General Jacqueminot</i> . Rich crimson, double; a beautiful shade.
494. Louis Barlet, free.	T.	Madame Ducher, 1875. Pale yellow, tinged with fawn.
495. Louis Chaix, dwf.	H.R.	Lacharme, 1857. Raised from <i>Giant of Battles</i> . Crimson.
496. Louis Doré, mod. or free.	H.R.	Fontaine, 1878. Red, large, full; little or no fragrance, bushy growth.
497. Louis Phil- ippe, mod.	Beng.	Crimson; an inferior Agrippina.
498. Louis Rich- ard, free.	T.	Madame Ducher, 1877. Coppery rose, the centre sometimes deep red.
499. Louis Van Houtte, free.	H.R.	Granger, 1863. Red, tinged with crimson, reddish thorns; not of first quality.
✓ 500. Louis Van Houtte, dwf. or mod.	H.R.	Lacharme, 1869. Said to be from <i>Charles Lefebvre</i> . Crimson-maroon, medium size, sometimes large, full, semiglobular form; large foliage, fewer thorns than most other dark roses, highly perfumed. This is a tender sort, but it is very free blooming, and decidedly the finest crimson yet sent out.
501. Louis d'Ar- zens, mod. or free.	H.N.	Lacharme, 1861. White tinged with blush; superseded by <i>Coquette des Blanches</i> .
502. Louise de Sa- voie, Mod.	T.	Ducher, 1855. Pale yellow, beautiful buds; much like <i>Le Pactole</i> .
503. Louise Odier, vig.	B.	Margottin, 1851. Bright rose, medium size, full, well formed, hardy.
504. Louise Pey- ronny, mod. (<i>Lælia</i> .)	H.R.	Lacharme, 1851. Raised from <i>La Reine</i> . Silvery rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
505. <i>Lyonnaise</i> , mod.	H.R.	Lacharme, 1871. Belongs to the <i>Victor Verdier</i> type. Pink, with deeper centre, fades quickly; a coarse, inferior sort.
506. <i>Ma Capucine</i> , dwf.	T.	Levet, 1871. Raised from the <i>Noisette Ophirie</i> . Nasturtium yellow, beautiful buds; a very distinct rose, which, from its delicate habit, is useless for ordinary cultivators to attempt growing.
507. <i>Mabel Morrison</i> , mod.	H.R.	Broughton, 1878. (Sent out by Bennett.) A sport from <i>Baroness Rothschild</i> . Flesh white, changing to pure white, in the autumn it is sometimes tinged with pink; semi-double, cup-shaped flowers. In all, save substance of petal and color, this variety is identical with the parent; though not so full as we would like, it is yet a very useful garden rose, and occasionally it is good enough for exhibition.
508. <i>Mme. Adelaide Cote</i> .	H.R.	Schmitt, 1881. "Reddish-crimson, in the style of <i>Cardinal Patrizzi</i> ."
509. <i>Mme. Alboni</i> , dwf.	M.	V. Verdier, 1850. Pink, very large, very full, flat; much like <i>Glory of Mosses</i> , and, like that kind, too full to be pretty in the bud state.
510. <i>Mme. Alexandre Bernaix</i> , mod.	H.T.	Guillot-fils, 1877. Salmon-rose, petals sometimes edged with blush; has true Tea odor, though not strong. A promising variety.
511. <i>Mme. Alfred Carrière</i> , free or vig.	H.N.	Schwartz, 1879. White, not free blooming, undesirable.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
512. Mme. Alfred de Rougemont, mod.	H.N.	Lacharme, 1862. Raised from <i>Blanche Lafitte</i> × <i>Sappho</i> . White, tinged with pink; surpassed by <i>Coquettedes Blanches</i> .
513. Mme. Alice Dureau, free.	H.R.	Vignerón, 1868. Belongs to <i>La Reine</i> type. Rose color; much like the parent, but more shy in the autumn.
514. Mme. Alphonse Laval-lée, mod.	H.R.	E. Verdier, 1878. Carmine-red, in the style of <i>Alfred Colomb</i> ; a promising variety.
515. Mme. Amadieu.	T.	Pernet, 1880. Bright rose, double, large.
516. Mme. Amélie Baltet.	H.R.	E. Verdier, 1878. Satiny-rose, well formed.
517. Mme. André Leroy, vig.	H.R.	Trouillard, 1865. Salmon-rose, large, double.
518. Mme. Angèle Jacquier, free or mod.	T.	Guillot-fils, 1879. Bright rose, base of petals coppery yellow; a good deal the build of <i>Catherine Mermet</i> . I am well pleased with the appearance of this kind.
519. Mme. Anna de Besobrasoff, mod.	H.R.	Nabonnand, 1877. Flesh color, the centre shaded with rose, medium size.
520. Mme. Anna de Besobrasoff, free.	H.R.	Gonod, 1877. Raised from <i>Charles Lefebvre</i> . Deep red, shaded with purple.
521. Mme. Auguste Perrin, mod.	H.N.	Schwartz, 1878. Mottled pink, small or medium size, well formed; a new color in this class. We are most favorably impressed with it.
522. Mme. Azélie Imbert, free.	T.	Levet, 1870. Raised from <i>Mme. Falcot</i> . Pale yellow.
523. Mme. Barillet Deschamps.	T.	Bernède, 1855. White, centre creamy-yellow.
524. Mme. Barthélemy Levet.	T.	Levet, 1879. Canary-yellow, medium size.
525. Mme. Bel-	H.N.	Guillot-père, 1866. Belongs to

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
lenden Ker, mod.		<i>Eliza Boelle</i> type. White, centre blush; very beautiful.
526. Mme. Bérard, vig.	Cl.T.	Levet, 1870. Raised from <i>Gloire de Dijon</i> . Very similar to the parent; the flowers are somewhat less full, of a fresher shade, and are better in the bud state.
527. Mme. Bernard, mod.	T.	Levet, 1875. Raised from <i>Mme. Falcol</i> . Coppery-yellow, medium sized, distinct.
528. Mme. Bernutz, free.	H.R.	Jamain, 1874. Satiny-rose, very large, full.
529. Mme. Boll, vig.	H.R.	Daniel Boll, 1859. (Sent out by Boyeau.) Belongs to <i>Baronne Piévest</i> type. Carmine-rose; a very effective garden sort; very stout shoots, five leaflets only, there are seven in <i>Boieldieu</i> , a kindred variety.
530. Mme. Boutin, mod.	H.R.	Jamain, 1861. Red, large, full; a good garden rose.
531. Mme. Bouton, dwf.	M.	Deep rose, mildews badly; resembles <i>Oscar Le Clerc</i> .
532. Mme. Bravy, mod. or free. (<i>Alba Rosea</i> , <i>Mme. Serat.</i>)	T.	Guillot, of Pont Chérin, 1848. (Sent out by Guillot of Lyons.) Creamy-white, large, full, of very symmetrical form and great fragrance; one of the most beautiful and useful in the class.
533. Mme. Brémond, dwf.	T.	Guillot-fils, 1866. Violet-red.
534. Mme. Bruel, mod.	H.R.	Levet, 1881. Raised from <i>Countess of Oxford</i> . Carmine-rose.
535. Mme. Bureau, mod. [free.	Beng.	White, tinged with blush.
536. Mme. Caillat,	H.R.	E. Verdier, 1861. Cherry-rose.
537. Mme. Camille, vig.	T.	Guillot-fils, 1871. Mushroom-color, large, coarse flowers; not worthy of cultivation.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
538. Mme. Caradori Allan, vig.	P.	Feast, 1843. Bright pink, semi-double.
539. Mme. Caro.	T.	Lever, 1880. Salmon-yellow, medium size.
540. Mme. Caroline Kuster, free.	N.	Pernet, 1873. Pale yellow, often mottled with rose; a free blooming, excellent shrub rose, one of the best bedding kinds.
541. Mme. Celina Noirey, vig.	T.	Guillot-fils, 1868. Salmon, the outer petals washed out pink, very large, very full; a coarse flower, of dirty shade.
542. Mme. Charles free.	T.	Damaizin, 1864. Raised from <i>Safrano</i> . Apricot color; in the way of <i>Mme. Falcot</i> .
543. Mme. Charles Crapelet, v.g.	H.R.	Fontaine, 1859. Cherry-red, medium or large size, fragrant and good; wood armed with numerous thorns.
544. Mme. Charles Veidier, free or vig.	H.R.	Lacharme, 1864. Belongs to the <i>Baronne Prévost</i> type. Rosy vermillion, very large, a free bloomer.
545. Mme. Charles Wood, dwf.	H.R.	E. Verdier, 1861. Reddish crimson, large or very large, nearly full; one of the freest flowering kinds, but not of first quality. Occasionally, as with <i>General Washington</i> , some first-rate blooms are produced.
546. Mme. Chaté, mod.	H.R.	Fontaine, 1871. Cherry-red.
547. Mme. Chédane Guinois-seau, free.	T.	Lévêque, 1880. Canary-yellow, thought to be a valuable variety for the buds; probably in the style of <i>Isabella Sprunt</i> .
548. Mme. Chirard.	H.R.	Pernet, 1867. Rose, tinged with vermillion, full, peculiar rich scent; bushy habit, shy in autumn, many malformed flowers.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
549. Mme. Clémence Joigneaux, vig.	H.R.	Liabaud, 1861. Rose, tinged with lilac, double, large flowers.
550. Mme. Cler t, mod.	H.R.	Gonod, 1868. Salmon-rose.
551. Mme. Crosy, free or vig.	H.R.	Levet, 1881. Raised from <i>Souvenir de la Reine d'Angleterre</i> . Rose color, very large.
552. Mme. Cusin.	T.	Guillot-fils, 1881. Violet-rose, tinged with yellow.
553. Mme. Damazin, free or vig.	T.	Damaizin, 1858. Creamy-white, shaded salmon, very large, double ; not well formed.
554. Mme. de Laboulaye, mod. or dwf.	H.R.	Liabaud, 1877. Rosy-pink, somewhat fragrant, bushy habit, long, rather small foliage, wood thickly covered with dark brown thorns ; not very promising.
555. Mme. de Ridder, free or vig.	H.R.	Margottin, 1871. Red, shaded with violet-crimson, large, full, fine globular form ; green wood and thorns. A distinct sort, fragrant and beautiful, but fades easily.
556. Mme de St. Joseph, mod.	T.	Fawn, shaded salmon, large, full, highly scented ; not well formed.
557. Mme. de St. Pulgent, free.	H.R.	Gautreau, 1871. Raised from <i>Catherine Guillot</i> . Rosy-vermilion tinged with lilac, large, globular ; well formed.
558. Mme. de Tartas, mod.	T.	Bernède. Rose color, double.
559. Mme. de Vatri, free.	T.	Red, shaded with salmon, of good form, both in bud and flower, and well scented ; a very choice old sort.
560. Mme. Désiré Giraud, vig.	H.R.	Madame Giraud, 1853. (Sent out by Van Houtte.) A sport

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
561. Mme. Dévaucoux, free.	T.	from <i>Baronne Prévost</i> . Blush-white, striped with deep rose.
562. Mme. Dévert, mod. or dwf.	H.R.	Madame Ducher, 1874. Canary-yellow, medium size.
563. Mme. Domage, free.	H.R.	Pernet, 1876. Raised from <i>Victor Verdier</i> . Salmon-rose.
564. Mme. Ducher, mod.	H.R.	Margottin, 1853. Bright-rose, large, loose flowers, very thorny; not valuable.
565. Mme. Ducher, free.	T.	Levet, 1879. Silvery-rose, medium size, double.
566. Mme. Edward Ory, mod.	P.M.	Ducher, 1869. Creamy-yellow, medium size.
567. Mme. Elise Stchegoleff.	T.	Moreau-Robert, 1854. Carmine-red, of medium size, full; one of the best in the class, which is not saying much for the class.
568. Mme. Emilie Dupuy, free	T.	Nabonnand, 1881. Clear rose, flowers said to be in the style of <i>Niphetos</i> .
569. Mme. Etienne Levet, dwf.	H.T.	Levet, 1870. Salmon, sometimes pale fawn, large, full; not attractive.
570. Mme. Eugène Chambe y r a n, mod.	H.R.	Levet, 1873. Cherry-red, sometimes having a coppery shade, small size, pretty in the bud; slightly scented, agreeable odor.
571. Mme. Eugène Verdier, free or mod.	H.R.	Gonod, 1878. Belongs to the <i>Victor Verdier</i> type. Rose, tinged with violet, sometimes salmon-rose.
572. Mme. Falcot, mod.	T.	E. Verdier, 1878. Belongs to <i>La Reine</i> type. Mottled rose, very large, full, globular; a promising kind.
		Guillot fils, 1858. Raised from <i>Safrano</i> . Deep apricot; resembles the parent, but is

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		somewhat larger, more double, of deeper shade, less product- ive, and of weaker growth.
573. M me. Ferdi- nand Jamin, mod.	H R.	Lédéchaux, 1875. Deep rose, cupped form, highly scented.
574. M me. Fortunée Besson.	H.R.	Besson, 1881. Raised from <i>Jules Margottin</i> . Carmine-rose.
575. M me. François Janin, dwf. or med.	T.	Lédéchaux, 1872. Orange yel- low, small size, buds of ex- quisite shape; very distinct, both in color and its peculiar fragrance.
576. M me. François Pittet, mod.	H.N.	Lacharme, 1877. Pure white, small.
577. M me. Free- man, mod.	H.N.	Guillot-père, 1862. White, tinged with pink.
578. M me. Frémi- on, mod.	H.R.	Margottin, 1850. Cherry-red, cup-shaped, fragrant.
579. M me. Gabriel Luizet, vig.	H.R.	Liabaud, 1878. Belongs to the <i>Jules Margottin</i> type. Pink, somewhat fragrant, long foli- age; a promising kind, worthy of attention.
580. M me. Gail- lard, mod.	T.	Ducher, 1870. Salmon-yellow, large, somewhat coarse.
581. M me. George Schwartz, mod.	H.R.	Schwartz, 1871. Belongs to the <i>Victor Verdier</i> type. Silvery- rose, fades badly and is coarse.
582. M me. Gustave Bonnet, free.	H.N.	Lacharme, 1860. From <i>Blanche Lafitte</i> X <i>Sappho</i> . White, tinged with pink; surpassed by others of the class.
583. M me. Hardy, vig.	Dam.	Hardy, 1832. White, large, very full, flat form, very fragrant; sometimes comes with green centre, but very beautiful when in perfection. A diffi- cult sort to grow from cut- tings.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
584. Mme. Hippolyte Jamin, mod.	H.R.	Garçon, 1871. (Sent out by Jamin.) White, tinged with rose, very large, full.
585. Mme. Hippolyte Jamin, free.	T.	Guillot-fils, 1869. White, tinged in the centre with yellow, large, full.
586. Mme. Hoche, mod. or dwf.	M.	Moreau-Robert, 1859. White, superseded by <i>White Bath</i> .
587. Mme. Hunne- belle, free.	H.R.	Fontaine, 1873. Light rose, large, fragrant.
588. Mme. Isaac Pereire, free or vig.	B.	Margottin-fils, 1880. Carmine-red, very large, full, free blooming.
589. Mme. Jeanne Joubert, vig.	B.	Margottin, 1877. Red, medium size, non-autumnal.
590. Mme. Jolibois, mod.	H.R.	E. Verdier, 1879. Silvery rose, medium size, full.
591. Mme. Joly, free.	H.R.	Rose color, medium size, semi-cupped, fragrant, and well formed; seems to be of Bourbon origin.
592. Mme. Joseph Halphen, mod	T.	Margottin, 1859. Blush, medium size.
593. Mme. Joseph Schwartz, free.	T.	Schwartz, 1880. From <i>Comtesse de Labarthe</i> . Blush, the edge of petals tinged with carmine.
594. Mme. John Twombly, free.	H.R.	Schwartz, 1881. Vermilion-red, said to have some resemblance to <i>Alfred Colomb</i> .
595. Mme. Jules Grévy.	H.R.	Schwartz, 1881. From <i>Triomphe de l'Exposition</i> × <i>Madame Falcot</i> . Salmon-pink.
596. Mme. Jules Margottin, mod.	T.	Levet, 1871. Carmine-pink, tinged with lilac, very fragrant; inclined to come in rough form.
597. Mme. Julie Daran, free.	H.R.	Touvais, 1861. Violet-crimson, a fine color; shy in the autumn.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
598. Mme. Julie Weidman.	H.T.	Soupert & Notting, 1880. Salmon-rose.
599. Mme. Knorr, dwf.	H.R.	V. Verdier, 1855. Rose color, medium size, full, flat form, very sweet. <i>See</i> Baroness Rothschild.
Mme. de Rothschild.		
600. Mme. Lacharme, dwf.	H.R.	Lacharme, 1872. Claimed to have been raised from <i>Fules Margottin</i> \times <i>Sombreuil</i> . White, tinged with pink, medium size, full or very full, globular; does not open well, and is shy in the autumn. Of bushy growth, and quite hardy.
601. Mme. Laffay, free.	H.R.	Laffay, 1839. Rose color, large, double, cupped form, red spines; surpassed by many others of the same shade.
602. Mme. Lambert, vig.	T.	Lacharme, 1877. Rosy-salmon, deepening toward the centre, the color is variable, sometimes being a rosy flesh; the flowers are large, very full, and good. This variety is not so refined as many others, but is of excellent habit, free blooming qualities, and is to be considered one of our most useful Teas.
603. Mme. Landeau, mod.	P.M.	Moreau - Robert, 1873. Red, medium size, full; not valuable.
604. Mme. Laurent, vig.	H.R.	Granger, 1871. Cherry-red.
605. Mme. Léon de St. Jean, mod.	T.	Levet, 1875. Pale yellow, very fragrant, poor form.
606. Mme. Levet, vig.	Cl.T.	Levet, 1869. Raised from <i>Gloire de Dijon</i> . Very much like the parent, but inferior to it.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
607. Mme. Lilien- thal.	H.R.	Liabaud, 1878. Bright rose, tinged with salmon.
608. Mme. Lœben Sels, mod.	H.T.	Soupert & Notting, 1879. Sil- very-white, shaded with rose, large, full, somewhat flat form.
609. M m e. Louis Caricques, vig.	H.R.	Fontaine, 1859. Rosy-crimson, double, free in autumn; not of first quality.
610. M m e. Louis Donadine, dwf. or mod.	H.R.	Gonod, 1877. A sport from <i>Countess of Oxford</i> . Nearly the shade of <i>Eugénie Verdier</i> .
611. Mme. Louis Henry, vig.	N.	Mme. Ducher, 1879. Pale yel- low, fragrant; in the way of <i>Solfaterre</i> .
612. Mme. Louis Lévêque, mod.	H.R.	Lévêque, 1874. Belongs to the <i>Jules Margottin</i> type. Car- mine-rose, large, very full, somewhat flat form, slightly fragrant; blooms late in the season, but is shy in the au- tumn.
613. Mme. Margot- tin, mod.	T.	Guillot-fils, 1866. Citron-yellow, sometimes with coppery cen- tre, large, full, many mal- formed flowers, fine when per- fect.
614. Mme. Marie Bianchi.	H.R.	Guillot-fils, 1881. Raised from <i>Victor Verdier</i> × <i>Virginal</i> . Blush, tinged with lilac, fra- grant.
615. Mme. Marie Cirotte, mod.	H.R.	C. Verdier, 1867. Salmon-pink.
616. Mme. Marie Rœderer.	H.R.	Lévêque, 1881. Raised from <i>Jules Margottin</i> . Cherry-red.
617. Mme. Marie Finger, dwf.	H.R.	Rambaux, 1873. (Sent out by Lacharme.) Almost identical with <i>Eugénie Verdier</i> .
618. Mme. Marthe d'Halloy.	H.R.	Lévêque, 1881. Raised from <i>Madame Boutin</i> . Cherry-red.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
619. Mme. Maurice Kuppenheim, mod.	T.	Madame Ducher, 1877. Pale yellow, shaded with apricot.
620. Mme. Maurin, free.	T.	Guillot père, 1853. Creamy- white, large; not very reli- able.
621. Mme. Maxime de la Rochete- rie.	H.R.	T. Grangé, 1880. (Sent out by Vigneron.) Raised from <i>Vic- tor Verdier</i> . Carmine-rose.
622. Mme. Mélanie Willermoz, free.	T.	Lacharme, 1845. Creamy-white, thick petals, large, full, little fragrance; an excellent sort for out-of-door culture.
623. Mme. Miolan Carvalho, free or vig.	N.	Lévêque, 1876. Raised from <i>Chromatella</i> . Sulphur yellow.
524. Mme. Montet.	H.R.	Liabaud, 1880. Light pink, large petals.
625. Mme. Moreau, mod.	H.R.	Gonod. Red, shaded with vio- let.
626. Mme. Moreau, mod.	P.M.	Moreau-Robert, 1872. Red, large, full.
627. Mme. Nachury, vig.	H.R.	Damaizin, 1873. Belongs to <i>La Reine</i> type. Deep rose color, fades easily, flowers very large, rather loose, fra- grant.
✓ 628. Mme. Noman, dwf. (<i>Mademoi- selle Bonnaire</i>).	H.N.	Guillot-père, 1867. Raised from <i>Madame Récamier</i> . White, sometimes with shaded centre, medium size, full, globular; foliage somewhat crimp- led, wood armed with quite numerous, small spines. A rose of exquisite beauty.
629. Mme. Oswald de Kerchove, dwf.	H.N.	Schwartz, 1879. From a seed- ling of <i>Mme. Recamier</i> × <i>Mme. Falcot</i> . White, tinged with fawn, promises to be an ad- dition of merit. It has all the

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		characteristics of the <i>Eliza Boelle</i> type.
630. Mme. Pauline Labonté, free.	T.	Pradel, 1852. Salmon-rose, large, full, and good in the bud ; an excellent sort.
631. M m e. Pierre Oger, vig.	B.	Oger, 1878. (Sent out by C. Verdier.) A sport from <i>Reine Victoria</i> . Blush, the exterior of petals tinged with rosy lilac, cupped form, not a free bloomer.
632. Mme. Plantier, free.	H.Ch.	Plantier, 1835. Pure white, above medium size, full, flat form, seven leaflets, foliage rather small ; one of the best white roses for hedges and for massing. Early in the season the flowers are produced in great abundance.
633. Mme. Prosper Laugier, free.	H.R.	E. Verdier, 1875. Red, quartered shape, not fragrant, numerous red thorns ; of second quality.
634. Mme. Récamier, dwf.	H.N.	Lacharme, 1853. Blush white, medium size, well formed. The origin of this rose is unknown ; probably it is the result of a natural cross with some Noisette on a Bourbon.
635. Mme. Rivers, mod.	H.R.	Guillot-père, 1850. Blush ; a pretty sort, but of unhealthy habit and quite tender.
636. Mme. Rosalie de Wincop.	H.R.	Vignerons, 1881. Raised from <i>General Jacqueminot</i> . Red, tinged with lilac.
637. Mme. Scipion Cochet, vig.	H.R.	Cochet, 1871. Cherry-rose.
Mme. Sertat.	T.	See Madame Bravy.
638. M m e. Sophie Fropot, vig.	H.R.	Levet, 1876. Bright rose, nearly smooth wood ; a shy autumnal and not of first quality.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
639. Mme. Thévenot, free.	H.R.	Jamain, 1877. Bright red, free blooming.
640. M m e. Trifle, vig.	Cl.T.	Levet, 1869. Raised from <i>Gloire de Dijon</i> . Fawn and yellow; resembles the parent, but inferior to it in value.
641. Mme. Trotter, vig.	H.Ch.	Granger, 1855. Bright red, medium size, a free bloomer in the spring.
642. Mme. Trudeau, free.	H.R.	Daniel Boll, 1850. Rose, tinged with lilac, medium size, well formed, free flowering, mildews badly.
643. M m e. Victor Verdier, mod. or free.	H.R.	V. Verdier, 1863. Carmine-crimson, large, full, fine, globular form, very fragrant; a superb rose.
644. M m e. Vidot, dwf.	H.R.	Couturier, 1854. (Sent out by E. Verdier.) Flesh color, full, well formed; a beautiful rose of very delicate constitution.
645. Mme. Welche, mod.	T.	Madame Ducher, 1878. (Sent out by Bennett.) Raised from <i>Devoniensis</i> × <i>Souvenir d'un Ami</i> . Pale yellow, the centre coppery-yellow, large and full; a very distinct Tea.
646. M m e. Zeteman, mod. or free.	Dam.	Delicate flesh, changing to white, large, very full, flat form, fragrant, five to seven leaflets; a splendid white rose.
Mademoiselle Annie Wood.	H.R.	See Annie Wood.
647. Mlle. Blanche Durschmidt, free.	T.	Guillot-fils, 1877. Raised from <i>Madame Falcot</i> . Flesh color, semi-double, worthless.
648. Mlle. Bonnaire, dwf.	H.N.	Pernet, 1859. Closely resembles Madame Noman, it is difficult to see any points of difference by which one may be distinguished from the other.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
649. Mlle. Brigitte Violet, mod.	H.T.	Levet, 1878. Silvery-rose, slightly tinged with lilac ; not highly scented, but quite a pleasing sort.
650. Mlle. Cécile Berthod, dwf. or mod.	T.	Guillot-fils, 1871. Sulphur-yellow, medium size, pretty in the bud.
651. Mlle. Cécile Brünner, mod. or dwf.	Pol.	Madame Ducher, 1880. Salmon-pink, deeper in the centre, very small, full, delicately scented ; an exquisite miniature rose for floral work, opera bouquets, etc.
652. Mlle. Emma Hall, mod. or free.	H.Ch.	Liabaud, 1876. Raised from <i>Souvenir de la Reine d'Angleterre</i> . Carmine-rose, medium size, semi-globular form, fragrant ; there are seven leaflets of light green color, rather crimped, the shoots are armed with small spines of pale green. An excellent summer rose.
653. Mlle. Fer- nande de la Forest, mod.	H.R.	Damaizin, 1872. Belongs to the <i>Victor Verdier</i> type. Rose color, somewhat in the way of <i>Lyonnaise</i> ; of no value.
654. Mlle. Julie Dymonier, dwf.	H.R.	Gonod, 1879. Belongs to the <i>Victor Verdier</i> type. Salmon-pink, after the style of <i>Marie Cointet</i> .
655. Mlle. Lazarine Poizeau, dwf. or mod.	T.	Levet, 1876. Orange-yellow, small size, very pretty in the bud ; closely resembles <i>Madame François Janin</i> .
656. Mlle. Margué- rite Dombrain, free.	H.R.	E. Verdier, 1865. Belongs to <i>La Reine</i> type. Satiny-rose, a good sort.
657. Mlle. Marie Armand, mod.	T.	Levet, 1872. Canary-yellow, beautiful buds, well scented, delicate constitution.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
658. Mlle. Marie Berton, vig.	Cl.T.	Levet, 1875. Raised from <i>Gloire de Dijon</i> . Pale yellow, somewhat fragrant, the most free flowering of all the seedlings from <i>Gloire de Dijon</i> ; the flower stems are long and stout, the foliage large and lustrous. A magnificent yellow rose.
659. Mlle. Marie Chauvet.	H.R.	Besson, 1881. Raised from <i>Baroness Rothschild</i> . Deep rose color.
660. Mlle. Marie Cointet, dwf.	H.R.	Guillot-fils, 1872. Belongs to the <i>Victor Verdier</i> type. Salmon-pink; a very beautiful sort when perfect, but most of the flowers are malformed, or open badly.
661. Mlle. Marie Gonod, free.	H.R.	Gonod, 1871. Rosy-blush.
662. Mlle. Marie Rady, free.	H.R.	Fontaine, 1865. Vermilion-red shaded with crimson, large or very large, very full, of splendid globular form, very fragrant; it has more vermilion than <i>Alfred Colomb</i> , making it somewhat lighter and more dull; the shoots are armed with numerous red thorns, the foliage shows considerable lustre. There is no finer exhibition sort among the red roses, and were it as constant, it would be quite as valuable as <i>Alfred Colomb</i> and <i>Marie Baumann</i> , varieties which bear it some considerable resemblance.
663. Mlle. Rachel, dwf.	T.	Béluze, 1841. White, pointed buds, somewhat in the style of <i>Niphetos</i> , but not equal in quality to that fine sort.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
664. Mlle. Thérèse Levet, mod.	H.R.	Levet. 1866. Belongs to the <i>Fules Margottin</i> type. Salmon-rose, medium size, free blooming.
665. Magna Charta, vig.	H.Ch.	W. Paul, 1876. Pink, suffused with carmine, large or very large, full, globular; foliage and wood light green, numerous, dark spines. A fragrant, excellent variety.
666. Manetti Rose, vig.		Violet-rose, small size, single, not productive; this variety, since its introduction from Italy, is more used for a stock on which to bud choice sorts than any other kind. It has dark, brownish wood, and <i>always seven leaflets</i> , sometimes nine; there need be, therefore, no difficulty in distinguishing it from other kinds.
667. Marcelin Roda, mod.	T.	Ducher, 1872. Yellowish-white, the centre light yellow; a fairly good rose.
668. Marchioness of Exeter, free.	H.R.	Laxton, 1877. (Sent out by G. Paul.) A seedling from <i>Fules Margottin</i> . Cherry-rose, fragrant.
669. Maréchal Forey, vig. or free.	H.R.	Margottin, 1863. Raised from <i>Triomphe de l'Exposition</i> . Reddish-crimson, shy in the autumn.
670. Maréchal Niel, vig.	N.	Pradel, 1864. Supposed to be a seedling from <i>Isabella Gray</i> . Deep yellow, very large, very full, globular form, delightfully fragrant, the finest of all yellow roses; it is of delicate constitution, and requires very careful treatment to produce satisfactory results. It is only

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
671. Maréchal Robert, free.	T.	<p>adapted for culture under glass, and even then the inexperienced would do better not to attempt its culture, but use in its stead <i>Mlle. Marie Berton</i>, <i>Solfaterre</i>, or, for non-climbers, <i>Perle des Jardins</i>.</p> <p>Madame Ducher, 1875. White, the centre shaded with flesh, large, or very large, full, in the style of <i>Cornelia Cook</i>; a fine sort.</p>
672. Maréchal Vailant, free.	H.R.	<p>Viennot, 1861. (Sent out by Jamain.) Crimson, large, full, well-formed, fragrant; a fine rose, which, were it not for <i>Maurice Bernardin</i>, would be more useful. It is a valuable kind for large collections.</p>
673. Marguérite Brassac.	H.R.	<p>Brassac, 1875. The same as <i>Charles Lefebvre</i>.</p>
674. Marguérite de St. Amande, free.	H.R.	<p>Sansal, 1864. Raised from <i>Jules Margottin</i>. Bright rose, very beautiful in the bud state; will give more fine blooms in the autumn than any other of the class, and it is also one of the best for forcing. It cannot be propagated from cuttings.</p>
✓ 675. Marie Baumann, mod.	H.R.	<p>Baumann, 1863. Crimson-vermilion, suffused with carmine, large, full, of exquisite color and form, very fragrant; the wood freely covered with small light red thorns. This variety is a little lighter and brighter in color than <i>Marie Rady</i>, which is a shade lighter than <i>Alfred Colomb</i>. A rose of the highest</p>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		quality and very productive ; no collection can be complete with it left out. It should be given a favored position.
676. Marie Caro- line de Sar- toux.	T.	Nabonnand, 1881. Pure white.
677. Marie de Blois, free.	M.	Moreau - Robert, 1852. Rose color, double, not mossy, poor.
678. Marie de Bourgoyne, dwf.	P.M.	Moreau-Robert, 1853. Bright rose, medium size.
679. Marie Ducher, free.	T.	Ducher, 1868. Salmon-rose, large, very full, somewhat flat ; a free blooming kind, of excellent habit. Not a refined flower, yet it is a sort worth growing.
680. Marie Guillot, mod.	T.	Guillot-fils, 1874. White, faintly tinged with yellow, large, full ; of splendid form. One of the most beautiful Teas ; would that it were fragrant !
681. Marie Jaillet, mod.	T.	Madame Ducher, 1878. Pale rose, deeper in the centre.
682. Marie Louise Pernet, mod.	H.R.	Pernet, 1876. Raised from <i>Bar- oness Rothschild</i> . Deep rose, cupped form.
683. Marie Opoix, mod.	T.	Schwartz, 1874. Pale yellow, almost white, not of first quality.
684. Marie Sisley, mod.	T.	Guillot-fils, 1868. Rose tinged with salmon, sometimes cop- pery-rose ; a distinct sort, but not reliable, and at its best is not specially attractive.
685. Marie Van Houtte, free.	T.	Ducher, 1871. From <i>Madame de Tartas</i> × <i>Madame Falcot</i> . Pale yellow, the edges of petals

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		often lined with rose, well formed ; of good habit, and in every respect a most charming sort. The finest of all Teas for out-door culture.
686. Marie Verdier, free.	H.R.	E. Verdier, 1877. Rose color.
687. Marquis de Balbiano, free.	B.	Lacharme, 1855. Silvery-rose, medium size, full.
688. Marquis de Sanima, mod.	T.	Mme. Ducher, 1875. Coppery rose, in the style of <i>Reine du Portugal</i> , but not so good.
689. Marquis of Salisbury, mod.	H.R.	G. Paul, 1879. Coppery-rose ; shaded with crimson, large, globular form, distinct.
690. Marquise Adèle de Murinais, free.	H.R.	Schwartz, 1876. Raised from <i>Madame Laffay</i> . Silvery-rose ; an inferior sort.
691. Marquise de Castellane, mod.	H.R.	Pernet, 1869. Supposed to be a seedling from <i>Jules Margottin</i> . Carmine-rose, a bright and permanent shade, very large, very full, not fragrant but effective, does not bloom until late ; a valuable sort for exhibition purposes. Does not propagate from cuttings.
692. Marquise de Ligneries, mod.	H.R.	Guénoux, 1879. (Sent out by <i>Jamain</i> .) Rose color, wood nearly smooth.
693. Marquise de Mortemart, mod. or dwf.	H.R.	Liabaud, 1868. Raised from <i>Jules Margottin</i> . Blush, well formed. A fine rose of delicate habit.
694. Mary Pochin.	H.R.	Rev. E. M. Pochin, 1881. (Sent out by <i>Cranston</i> .) Lake, shaded with crimson, medium size.
695. Masterpiece, mod. or free.	H.R.	W. Paul, 1880. Supposed to be a seedling from <i>Beauty of Waltham</i> . Rosy-crimson.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
696. Mathilde Le- nærts.	Cl.T.	Levet, 1879. Raised from <i>Gloire de Dijon</i> . Rose color.
697. Maurice Ber- nardin, vig. or free.	H.R.	Granger, 1861. Raised from <i>General Jacqueminot</i> . Bright crimson, large, moderately full ; a good free flowering sort, generally coming in clusters ; the roots are very delicate, and break easily. In the spring, this is, perhaps, the most prolific of all crimson sorts.
698. MayQuennell, dwf. or mod.	H.R.	Postans, 1878. (Sent out by <i>W. Paul & Son</i> .) Magenta, shaded with crimson, large flowers, many of them coming imperfect ; wood rather smooth, foliage dark.
699. M a y Turner, mod.	H.R.	E. Verdier, 1874. Salmon-rose.
700. Mélanie Oger, free.	T.	Oger, 1851. Yellowish white, deeper at centre, medium size.
701. Mélanie Sou- pert.	T.	Nabonnand, 1881. White, large, very full.
702. Mère de St. Louis, mod.	H.R.	Lacharme, 1852. Raised from <i>La Reine</i> . Pink, medium size.
703. Michael Bon- net, free.	H.R.	Guillot-père, 1864. Rose color, in the way of <i>Madame Foly</i> , but inferior.
704. Michael Saun- ders, mod.	H.T.	Bennet, 1879. From <i>President</i> × <i>Madame Victor Verdier</i> . Deep bronzed rose, or rose shaded with coppery-red, medium size, very full, finely formed, somewhat fragrant ; on account of their great fulness the flowers do not open well under glass, but they are fine in open air. A very distinct and pleasing sort ; the best of the set sent out by <i>Bennett</i> .

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
705. Mignonette.	Pol.	Guillot-fils, 1881. "Delicate rose, changing to blush, very small, double, flowering in corymbs of thirty or forty blooms."
706. Miller-Hayes, mod.	H.R.	E. Verdier, 1873. Reddish crimson.
707. Miss Glegg, free.	N.	Vibert. White, the centre often flesh color, very small, double; resembles <i>Aimée Vibert</i> , but is much inferior.
708. Miss Hassard, free.	H.R.	Turner, 1875. Raised from <i>Marguerite de St. Amande</i> . Pink, large, very full, sweetly scented; many imperfect blooms.
709. Miss Ingram, free.	H.Ch.	Ingram, 1868. (Sent out by <i>Turner</i> .) Blush white, well formed; a fine rose.
710. Miss May Paul, vig.	Cl.T.	Levet, 1881. Raised from <i>Gloire de Dijon</i> . "Lilac-white, reverse of the petals red."
711. Miss Tweed, free.	A.	Pale yellow, semi-double; it has <i>nine</i> leaflets, rarely seven; <i>Persian Yellow</i> ; has <i>seven</i> leaflets only; remembering this, it is always a simple matter to distinguish the varieties when out of flower.
712. Modèle de Perfection, mod.	B.	Guillot-fils, 1860. Raised from <i>Louise Odier</i> . Satiny rose, medium size, well formed.
713. Mogador.	H.R.	Raised from <i>Rose du Roi</i> , and esteemed as an improvement on that variety. It is a crimson damask which flowers in autumn.
714. Moiré, mod.	T.	Moiré, 1844. Fawn and rose.
715. Monsieur Al- fred Leveau.	H.R.	Vignerons, 1880. Carmine-rose.
716. Monsieur Bon-	H.R.	Liabaud, 1864. Very deep crim-

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
cenne, free or mod.		son, double, medium size ; a good rose, but now displaced by <i>Baron de Bonstetten</i> .
717. Monsieur E. Y. Teas, mod. or dwf.	H.R.	E. Verdier, 1874. Carmine- crimson, large, fine, globular form, highly scented ; a superb rose.
718. Monsieur Fil- lion, mod.	H.R.	Gonod, 1876. Belongs to the <i>Victor Verdier</i> type. Carmine- rose, not of first quality.
719. Monsieur Fur- tado, free or mod.	T.	Laffay, 1863. Yellow, medium or small size, well formed, very full ; an exquisite sort, of good habit, not nearly so much grown as it deserves.
720. Monsieur Jard, free.	B.	Guillot-père, 1857. Red, tinged with violet.
721. Monsieur Jour- naux, vig.	H.R.	Marest, 1868. Brilliant red.
722. Monsieur Jules Monges.	H.R.	Guillot-fils, 1881. Carmine- rose, cupped form.
723. Monsieur No- man, dwf.	H.R.	Guillot-père, 1876. Raised from <i>Jules Margottin</i> . Rose color, often delicately mottled, beau- tiful globular form. Unreli- able, but magnificent when in perfection.
724. Monsieur Thouvenel.	H.R.	Vignerot, 1880. Velvety red, flat form.
725. Monthly Cab- bage.	Beng.	Violet rose, somewhat fragrant.
726. Mrs. Baker. mod.	H.R.	Turner, 1875. Belongs to the <i>Victor Verdier</i> type. Carmine-red.
727. Mrs. Bosan- quet, mod.	Beng.	Madam Pean. Rosy-flesh, very productive.
728. Mrs. Elliott, free.	H.R.	Laffay, 1840. Rose color, double, generally seven leaflets ; of second quality.
729. Mrs. Harry Turner, mod.	H.R.	Laxton, 1880. (Sent out by Turner.) Raised from <i>Charles</i>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
730. Mrs. Hovey, vig.	P.	<i>Lefebvre</i> × <i>Alfred de Rougemont</i> . Scarlet-crimson, a splendid bright color; a very promising sort. Pierce. Blush, changing to white, resembles <i>Baltimore Belle</i> , but is hardier; a valuable climbing rose.
731. Mrs. Jowitt.	H.R.	Cranston, 1880. From <i>Marie Rady</i> × <i>Duc de Rohan</i> . Crimson, tinged with lake.
732. Mrs. Laxton, dwf.	H.R.	Laxton, 1878. (Sent out by G. Paul.) Raised from <i>Madame Victor Verdier</i> . Rosy-crimson, beautiful form,
733. Mrs. Opie, mod.	T.	Bell & Son, 1877. Salmon-rose.
734. Mrs. Pierce, vig.	P.	Pierce, 1850. Blush.
735. Mrs. Standish, dwf.	H.R.	Trouillard, 1860. Belongs to the <i>Giant of Battles</i> type. Deep crimson, tinged with purple.
736. Nancy Lee, dwf.	H.T.	Bennett, 1879. From <i>Alba Rosea</i> × <i>Edward Morren</i> . Satiny-rose, a delicate and lovely shade, medium or small size, beautiful buds, highly scented; growth slender, inclined to mildew. Were this of vigorous growth and good constitution, it would be a variety of great value.
737. Narcisse, mod. (<i>Enfant de Lyon</i>).	T.	1845. Yellow, an inferior <i>Mon-sieur Furtado</i> .
738. Nardy Frères, free.	H.R.	Ducher, 1868. Supposed to be a seedling from <i>Madame Boll</i> . Violet-red, a very distinct variety, but of too perishable a color to have any value.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
739. Nina, mod.	T.	Blush, loose flowers: not of value.
740. Niphetos, dwf.	T.	1844. White, sometimes tinged with pale yellow, long, large buds, the petals thick and durable. A very beautiful variety for growing under glass, it is entirely unsuited for growing in open air.
741. Nuits de Young, mod.	M.	Laffay, 1851. Purplish-red, a sullied shade.
742. Odéric Vital, vig.	H.R.	Oger, 1858. A sport from <i>Baronne Prévost</i> . A little lighter in color than the parent, the habit is the same.
743. Odorata, free. (<i>Blush Tea</i> .)	T.	Of Chinese origin, brought to England in 1810. Carmine, fading to blush, large flowers, somewhat loose but good in the bud; one of the most fragrant. The larger number of the Teas are descendants of this sort.
744. Œillet Flam- and, free.	Fr.	Vibert, 1845. White, striped with rose, like a variegated carnation, double flowers, of medium size; the foliage is very dark.
745. Œillet Parfait, mod.	Prov.	Foulard, 1841. Blush, striped with violet-rose; inferior to the preceding sort.
Old Yellow Tea.	T.	See <i>Flavescens</i> .
746. Olga Marix, mod.	H.N.	Schwartz, 1873. Rosy-flesh, changing to white; inferior.
747. Olivier Del- homme, free.	H.R.	V. Verdier, 1861. Brilliant red, large, well formed.
748. Ophelia, mod.	T.	Ducher, 1873. Yellow, medium size, full.
749. Ophirie, vig.	N.	Goubault, 1844. Nasturtium-yellow, suffused with coppery-

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
750. Oriflamme de St. Louis, free.	H.R.	red, medium size, double ; a very distinct sort, but very shy. 1858. Raised from <i>General Jacqueminot</i> . Brilliant crimson ; resembles the parent, but is inferior to it.
751. Oscar Leclerc, mod.	P.M.	Robert, 1853. Red tinged with violet, in the way of <i>Madame Bouton</i> .
752. Oxonian, mod.	H.R.	Turner, 1875. Belongs to the <i>Victor Verdier</i> type. Rosy-red, somewhat fragrant, large size ; the only one of the type that has perfume.
753. Pæonia, free.	H.R.	Lacharme, 1855. Red, very large or large, full, fragrant, a free bloomer ; bushy habit, dark lustrous foliage, numerous pale red thorns. A fine garden rose, but not quite up to exhibition standard.
754. Pallida.	P.	Feast, 1843. Blush, much resembling <i>Superba</i> .
755. Panaché d'Or- leans, vig.	H.R.	Dauvesse, 1854. A sport from <i>Baronne Prévost</i> . Identical with the parent sort, except that the flowers are striped with rosy-white. It is not constant, soon running back to the original.
756. Paquerette, mod.	Pol.	Guillot-fils, 1875. Pure white, about one inch in diameter, full, prettily formed, recalling blossoms of the double flowering cherry ; there are five to seven leaflets, the growth is slender.
757. Paul Jamain, free.	H.R.	Jamain, 1878. Belongs to the <i>Charles Lefebvre</i> type. Crim-

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		son, slightly tinged with violet-red. Very similar to <i>Charles Lefebvre</i> .
758. Paul Joseph, free.	B.	Portemer, 1842. Violet-red.
759. Paul Nabonnand, free.	T.	Nabonnand, 1877. Satiny-rose.
760. Paul Neyron, vig.	H.R.	Levet, 1869. From <i>Victor Verdier</i> , × <i>Anne de Diesbach</i> . Deep rose, very large, very full, somewhat fragrant, free-blooming; the wood is nearly smooth, the foliage tough and enduring, somewhat tender, the growth is very upright. The largest variety known, and a very desirable sort for the garden.
[vig.]		
761. Paul Perras,	H.Ch.	Pale rose, large, full.
762. Paul Ricaut, free or vig.	H.Ch.	Portemer, 1845. Carmine-crimson, medium size, fine globular form; one of the most beautiful summer roses.
		C. Verdier, 1866. Carmine-red, large, globular flowers, well built; a splendid sort.
763. Paul Verdier, vig.	H.Ch.	
764. Pauline Lansezeur, mod.	H.R.	Lansezeur, 1855. Red, shaded with violet-crimson, medium size, free blooming.
765. Pauline Talabot, free.	H.R.	E. Verdier, 1873. Carmine-red.
766. Peach Blossom, mod.	H.R.	W. Paul, 1874. Belongs to the <i>Fules Margottin</i> type. Mottled pink, a fine color, many imperfect blooms; there are others of this type like <i>Comtesse de Serenye</i> , <i>Egeria</i> , and <i>Marguerite de St. Amande</i> , of nearly the same shade, that are greatly superior.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
767. Pearl, dwf.	H.T.	Bennett, 1879. From <i>President</i> × <i>Comtesse de Serenye</i> . Rosy-flesh, small, full, pretty buds, with a decided Bourbon fragrance; growth very slender, subject to mildew.
768. Penelope Mayo, mod.	H.R.	Davis, 1878. (Sent out by Turner.) Carmine-red, full, well-shaped flowers.
769. Perfection de Monplaisir, mod.	T.	Levet, 1871. Yellow, a good Tea, which may be described as an improved <i>Canary</i> ; like that sort it is delicate.
770. Perfection des Blanches, free.	H.N.	Schwartz, 1873. White, a good sort, but inferior to <i>Coquette des Alpes</i> .
771. Perle d'Angers, mod.	B.	Moreau-Robert, 1879. Blush.
772. Perle des Blanches, mod.	H.N.	Lacharme, 1872. From <i>Blanche Lafitte</i> × <i>Sappho</i> . White, inferior to others of the type.
773. Perle des Jardins, free.	T.	Levet, 1874. Canary-yellow, large or very large, full, well formed, stiff stems, very free; the leaflets are five to seven in number, deeply serrated, very dark and glaucous. A superb sort for forcing, and fine also in open air.
774. Perle de Lyon, mod.	T.	Ducher, 1872. Yellow with saffron centre, large, full, very fragrant; fully as fine in quality as the preceding, but so subject to mildew as to be worthless to ordinary cultivators.
775. Perpetual White Moss, free.	M.	Laffay. A sport from <i>White Damask</i> . White, tinged with flesh, flowers in clusters, medium size, semi-double or double, coarse form; but little

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
776. Persian Yellow, free.	A.	mossed, unattractive either in bud or flower; the name is a deception, as it very rarely blooms in the autumn. Greatly inferior to <i>White Bath</i> , and also <i>Comtesse de Murinais</i> . Introduced from Persia by H. Willock, in 1830. Bright yellow, small, nearly full, well formed; small foliage, faintly scented like the Sweetbrier; seven leaflets; the wood is chocolate-brown in color, armed with numerous brown thorns; it is the finest of all hardy yellow roses. It must not be closely pruned; it is desirable to grow more than one plant, and by pruning one this year, in the usual way, and the other the next, annual crops of flowers may be had. Does not grow from cuttings.
777. Pierre Guillot, mod.	H.T.	Guillot-fils, 1879. Deep red, fragrant and good.
778. Pierre Notting, free.	H.R.	Portemer, 1863. Deep crimson, tinged with violet, large, or very large, fine, globular form, highly scented; the most beautiful dark rose, after <i>Louis Van Houtte</i> .
779. Pierre Seletzki,	H.R.	Levet, 1872. Violet-red.
780. Pius the Ninth, vig.	H.R.	Vibert, 1849. Violet-rose, a very sullied shade, flat form, very full, free blooming, very hardy.
781. Portland Blanche, free.	Dam.	Vibert, 1836. White, tinged with flesh, large, very full, flat form; often comes with green centre.
782. Préfet Limbourg, vig.	H.R.	Margottin-fils, 1878. Crimson, tinged with violet, double, or full; a rose of fine color.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
783. President.	T.	1860. (Sent out by W. Paul.) See Adam.
784. President Léon de St. Jean, mod.	H.R.	Lacharme, 1875. Raised from <i>Charles Lefebvre</i> . This is simply an inferior <i>Charles Lefebvre</i> , not worthy of cultivation.
785. President Lincoln, free.	H.R.	Granger, 1863. Vermilion-red, tinged with crimson, the flowers are much like <i>General Washington</i> , but inferior in quality to that variety, the habit of growth is stronger.
786. President Mas, free.	H.R.	Guillot-fils, 1865. Raised from <i>Triomphe de l'Exposition</i> . Red, shaded with crimson, often comes with bad centre.
787. President Schlachter, free or vig.	H.R.	E. Verdier, 1877. Reddish-crimson, tinged with violet.
788. President Thiers, dwf.	H.R.	Lacharme, 1871. Belongs to the <i>Victor Verdier</i> type. Carmine-red, one of the darkest colored in the type.
789. Pride of Waltham, mod.	H.R.	W. Paul, 1881. Belongs to the <i>Victor Verdier</i> type. Flesh color, shaded with rose, a deeper shade than <i>Eugénie Verdier</i> .
790. Prince Arthur, free.	H.R.	Cant, 1875. Belongs to the <i>General Jacqueminot</i> type. Deep crimson, smaller but better formed than <i>Jacqueminot</i> .
791. Prince Camille de Rohan, free.	H.R.	E. Verdier, 1861. Very deep velvety-crimson, large, moderately full, habit somewhat spreading, shy in autumn. A good rose, of splendid color.
792. Prince de Portia, free.	H.R.	E. Verdier, 1865. Vermilion, large, full, well formed, one of the most fragrant, somewhat

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		subject to mildew. A splendid variety.
793. Prince Humbert, free or mod.	H.R.	Margottin, 1867. Crimson, large, well formed, excellent.
794. Prince Léon, mod.	H.R.	Marest, 1852. Rosy-crimson, stiff, short wood.
795. Prince of Wales, mod.	H.R.	Laxton, 1869. (Sent out by G. Paul.) From <i>Louise Peyronny</i> × <i>Victor Verdier</i> . Pink, very large, double.
796. Prince Paul Demidoff, free.	H.R.	Guillot-fils, 1873. Satiny-rose.
797. Prince Prosper d'Aremberg.	T.	Soupert & Notting, 1880. Salmon-red.
798. Princess Adelaide, vig.	M.	Laffay, 1845. Pale rose, medium size, not very mossy, but good in bud and flower; dark foliage, which is often variegated.
799. Princess Alice, vig.	M.	W. Paul, 1853. Raised from <i>Luxembourg</i> . Violet-rose, not well mossed.
800. Princess Antoinette Strozio, free.	H.R.	E. Verdier, 1874. Red, large, full, well formed; slightly in the way of <i>Marie Rady</i> .
801. Princess Beatrix, mod.	H.R.	W. Paul, 1872. Belongs to the <i>Victor Verdier</i> type. Pink, globular flowers; fades quickly and is not desirable.
802. Princess Charlotte de la Trémouille, mod.	H.R.	Lévêque, 1877. Pale satiny-rose, medium size, full, somewhat fragrant; not of first quality, but very free blooming, and therefore of some value.
803. Princess Christian, mod.	H.R.	W. Paul, 1870. Salmon-rose, does not open well; worthless.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
804. Princess Clementine, vig.	Prov.	Vibert, 1842. A beautiful white rose, much resembling, but not equalling, <i>Blanche fleur</i> .
805. Princess Louise, mod.	H.R.	Laxton, 1870. (Sent out by G. Paul.) Raised from <i>Mme. Vidot</i> × <i>Virginal</i> . Blush, medium size, good.
806. Princess Louise Vic- toria, vig.	H.Cl.	Knight, 1872. Salmon-pink, medium size, fine globular form, not fragrant; dark foliage, wood nearly smooth. A splendid rose.
807. Princess Marie Dolgorouky, free.	H.R.	Gonod, 1878. Raised from <i>Anne de Diesbach</i> . Satiny-rose, very large.
808. Princess Mary of Cambridge, mod.	H.R.	Granger, 1866. (Sent out by G. Paul.) From <i>Duchess of Sutherland</i> × <i>Jules Margottin</i> . Salmon-pink, often mottled; a fine sort, now surpassed by <i>Countess of Serenye</i> and <i>Egeria</i> .
809. Princess Ma- thilde, mod.	H.R.	Liabaud, 1860. (Sent out by Jean Pernet.) Burgundy-crimson, a lovely shade, medium size, double, never full. It seems as though this must be the founder of the Baron de Bonstetten type.
810. Princess of Wales, free.	H.R.	W. Paul, 1864. Crimson, cupped form, double.
811. Professor Koch, free.	H.R.	E. Verdier, 1861. Cherry-red, medium size, double, erect growth, liable to mildew.
812. Pumila, free.	N.	Origin and raiser unknown. Salmon-rose, seeming to have <i>Safrano</i> blood, very free.
[bra, mod.		
813. Purpurea Ru-	M.	Purplish-red, a bad color.
814. Queen Eleanor, mod. or free.	H.R.	W. Paul, 1876. Pink, tinged with magenta-red, large, full, well formed; wood and thorns light green. A very beautiful

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
815. Queen of Ayrshires, vig.	Ay.	rose when perfect, but sparse- ly produced and not reliable.
816. Queen of Bed- ders, dwf.	B.	Rivers. Violet-crimson, semi- double, small.
817. Queen of Bourbons, mod. or dwf.	B.	Noble, 1877, Raised from <i>Sir</i> <i>J. Paxton</i> . Crimson, medium size, very full; a free flower- ing sort. The color is not very durable.
818. Queen of Queens.	H.R.	Mauger, 1834. Fawn and rose, medium or small size, fra- grant, very free; of delicate habit.
819. Queen of the Belgians, vig.	Ay.	W. Paul, 1882. "Pink, with blush edges, large and full, and of perfect form; grows and flowers freely."
820. Queen of the Prairies, vig.	P.	White, small, double.
821. Queen of Wal- tham, mod.	H.R.	Feast, 1843. Rosy-red, fre- quently with white stripe, me- dium or large size, double; foliage large, five leaflets, quite deeply serrated.
822. Queen's Scar- let, mod.	Beng.	W. Paul, 1875. Cherry-red, of good size, very fragrant, does not bloom till late; a variety of fair quality.
823. Queen Vic- toria, mod.	H.R.	Hallock & Thorpe, 1880. Crim- son, seems to be an improved <i>Agrippina</i> .
824. R. Dudley Baxter.	H.R.	Fontaine, 1850. (Sent out by W. Paul) Raised from <i>La</i> <i>Reine</i> . Blush with pink cen- tre, large, very full, globular; does not open well.
825. Red Dragon, free.	H.R.	W. Paul, 1879. Maroon, large size.
		W. Paul, 1878. Crimson, large, rather loose flowers; not val- uable.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
826. Red Gauntlet.	H.R.	W. Paul & Son, 1881. Crimson.
827. Red Rover, vig. Red Safrano.	H.Cl. T.	W. Paul, 1863. Red, tinged with crimson. See Safrano à fleur Rouge.
828. ReineBlanche, mod.	M.	Robert, 1858. White, a shy blooming sort.
829. ReineBlanche, mod.	H.R.	Damaizin, 1868. Raised from <i>La Reine</i> . Blush, well-formed.
830. ReineBlanche, mod.	H.R.	Crozy, 1869. Raised from <i>Vic- tor Verdier</i> . Flesh-white, shad- ed with rose.
831. Reine de Por- tugal, mod.	T.	Guillot-fils, 1867. Coppery- yellow, blending with rose, large, very full ; an eminently distinct sort, but does not open well.
832. Reine des Massifs, vig.	N.	Levet, 1874. Salmon - yellow, medium size.
833. Reine des Vio- lettes, free.	H.R.	Mille-Mallet, 1860. Raised from <i>Pius the Ninth</i> . Violet-red, a muddy color.
834. Reine du Mi- di, free or vig.	H.R.	Robert, 1868. The same as <i>La Reine</i> , though supposed by some to be larger and fuller.
835. Reine Emma des Pays Bas, free.	T.	Nabonnand, 1879. Yellow, shad- ed with reddish salmon.
836. Reine Maria Pia, vig.	Cl.T.	Schwartz, 1880. Raised from <i>Gloire de Dijon</i> , Deep rose, the centre reddish crimson.
837. Reine Marie Henriette, vig.	Cl.T.	Levet, 1878. From <i>Mme. Bérard</i> × <i>Gen. Jacqueminot</i> . Cher- ry-red, a pure shade, large, double, somewhat fragrant ; a beautiful, but rather unpro- ductive sort.
838. Rêve d'Or, free.	N.	Ducher, 1869. Buff-yellow, me- dium size, full.
839. Rev. J. B. Camm, mod.	H.R.	Turner, 1875. Belongs to the <i>Fules Margottin</i> type. Carmine- rose, a fine enduring shade,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		large or medium size, semi-globular form; one of the most fragrant and free blooming. A superb rose.
840. Richard Laxton, free.	H.R.	Laxton, 1878. (Sent out by Turner.) Reddish-crimson, large, full; somewhat resembles <i>Maréchal Vaillant</i> .
841. Richard Smith, mod.	H.R.	E. Verdier, 1861. Belongs to the <i>Gen. Jacqueminot</i> type. Crimson, tinged with purple, not valuable.
842. Richard Wallace, free.	H.R.	Lévêque, 1871. Red, very large; not of first quality.
843. Rivers, free.	H.R.	Laffay, 1839. Rose color, large, flat form, not valuable.
844. Robert Mar-nock, free or vig.	H.R.	G. Paul, 1878. Belongs to the <i>Duke of Edinburgh</i> type. Brownish-crimson, double, not free in autumn.
845. Rose du Roi, mod. (<i>Crimson Perpetual</i> .)	Dam.	Lélieur, 1812. Bright crimson, large, double, very fragrant; occasionally blooms in autumn.
846. Rosieriste Harms, free.	H.R.	E. Verdier, 1879. Velvety-red, shaded with crimson, slightly resembling <i>Mme. Victor Verdier</i> .
847. Rosieriste Jacobs, free.	H.R.	Madame Ducher, 1880. Bright red.
848. Rosy Morn, dwf.	H.R.	W. Paul, 1878. Belongs to the <i>Victor Verdier</i> type. Salmon-pink, a deeper shade than <i>Eugénie Verdier</i> ; peculiar wood and foliage more like <i>Captain Christy</i> than any other variety. A good rose, but with too many imperfect blooms.
849. Royal Standard, mod.	H.R.	Turner, 1874. Satiny-rose, tinged with lilac, a large, well-formed, globular flower.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
850. Royal Tea, mod.	T.	White, faintly tinged with yellow, long, beautiful buds, delicate habit.
851. Rubens, mod.	H.R.	Laffay, 1852. Bright red, a fine color, flowers loose.
852. Rubens, free.	T.	Moreau - Robert, 1859. Rosy-flesh, deeper at centre, large, full, well formed, fine in the bud. An excellent variety.
853. Rugosa Alba, vig.		A species from Japan, introduced some years ago. White, large size, five petals, fragrant. A beautiful single rose.
854. Rugosa Rubra, vig.		Also from Japan. Deep rose, tinged with violet, single, fragrant. The flowers are succeeded by very bright colored hips of large size, which in the autumn are exceedingly attractive. The leaflets are nine in number, of dark color, very tough and durable. These two kinds are splendid shrubs for borders.
855. S. Reynolds Hole, mod.	H.R.	G. Paul, 1872. Maroon, flushed with scarlet-crimson, medium size, full, well formed; shy in the autumn and subject to mildew. A rose of great beauty but not at all adapted to general cultivation.
856. Safrano, free.	T.	Beauregard, 1839. Saffron and apricot-yellow, large, semi-double, exceedingly beautiful in the bud, very free. The seed organs are better developed than in almost any other kind.
857. Safrano à fleur Rouge, mod. (Red Safrano.)	T.	Oger, 1868. Belong to the <i>Safrano</i> type. Saffron-yellow, shaded with coppery red, semi-double; a peculiar scent, not pleasing.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
858. Saint George, mod.	H.R.	W. Paul, 1874. Crimson, shaded with purple.
859. Salet, free.	P.M.	Lacharme, 1854. Light rose, medium size, flat form, fairly good buds, very free. The best in the class, after <i>Soupert & Notting</i> .
860. Sanguinea, mod.	Beng.	Crimson, medium or small size. An inferior <i>Agrippina</i> .
861. Senator Vaisse, mod.	H.R.	Guillot-père, 1859. Raised from <i>General Jacqueminot</i> . Red, shaded with carmine-crimson, large, full, well formed, highly scented. A fine rose, but now surpassed by <i>Mons. E. Y. Teas</i> .
862. Setina, free.	B.	T. Henderson, 1859. A sport from <i>Hermosa</i> . Identical with the parent, except that the habit is a little more vigorous.
Seven Sisters.	Mult.	<i>See Gréville</i> .
863. Sir Garnet Wolseley, vig. or free.	H.R.	Cranston, 1875. Said to be a seedling from <i>Prince Camille</i> . [We doubt this parentage.] Nearly identical with <i>Maurice Bernardin</i> ; the flowers may be a little superior in finish, but they are less freely produced.
864. Sir Joseph Paxton, free.	B.	Laffay, 1852. Deep red, slightly tinged with violet, medium size, well formed, non-austumnal.
865. Socrates, free.	T.	Moreau - Robert, 1858. Deep rose, tinged with fawn, large or medium size, double or full. Quite a good Tea.
866. Sœur des An ges, mod.	H.R.	Oger, 1863. A sport from <i>Duchesse d'Orléans</i> . Flesh, shaded with lilac; not valuable.
✓867. Solfaterre, vig. (Augusta.)	N.	Boyeau, 1843. Raised from <i>Lamarque</i> . Sulphur-yellow, large,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
868. Sombreuil, vig.	T.	double or full, slightly fragrant. An excellent climbing rose, and valuable as a stock on which to bud Teas. Moreau-Robert, 1851. Evidently of Bourbon parentage on one side. Creamy-white, often tinted with pink, large or very large, full, well formed; the hardiest and most vigorous of the white Teas, and free from mildew. A valuable sort for culture in the open air.
869. Soupert & Notting, dwf.	P.M.	Pernet, 1874. Rose color, very large, very full, globular form, highly scented, not very mossy, a true ever-blooming rose, five leaflets only. The flowers are sometimes malformed, but they are infinitely superior to all others of the same class.
870. Souvenir d'Adolphe Thiers, mod.	H.R.	Moreau-Robert, 1877. Raised from <i>Countess of Oxford</i> . Red, tinged with vermillion, very large.
871. Souvenir d'Auguste Rivière, free.	H.R.	E. Verdier, 1877. Belongs to the <i>Prince Camille</i> type. Velvety-crimson.
872. Souvenir d'Elise Vardon, mod.	T.	Marest, 1855. Flesh color, shaded with rosy-salmon, large, full; highly esteemed in England, but we have never admired it; refinement is lacking in the flower.
873. Souvenir de Georges Sand, free.	T.	Madame Ducher, 1876. Salmon and rose, reverse of petals tinged with lilac, badly formed.
874. Souvenir de	S.	Boll, 1854. A hybrid Scotch.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
Henry Clay, free.		Rose color, small or medium size, gives some blooms in the autumn.
875. Souvenir de la Malmaison, mod.	B.	Béluze, 1843. Supposed to be a seedling from <i>Madame Des- prez</i> . Flesh shaded with fawn, large, very full, flat form, rich foliage. A splendid rose.
876. Souvenir de la Reine d' An- gleterre, vig. or free.	H.R.	Cochet, 1855. Raised from <i>La Reine</i> . Bright rose, very large, double ; shy in autumn.
877. Souvenir de la Reine des Belges, mod. or free.	H.R.	Cochet, 1855. Carmine-red, me- dium size, good color, rather tender.
878. Souvenir de Laffay.	H.R.	E. Verdier, 1878. Violet-crim- son.
879. Souvenir de Leveson Gow- er, free.	H.R.	Guillot-père, 1852. Deep-rose, very large, double, or full, fine flowers ; quite tender, and subject to mildew.
880. Souvenir de Louis Van Houtte, free.	H.R.	E. Verdier, 1876. Bright crim- son, sometimes tinged with violet, well formed, quite a good rose.
881. Souvenir de Mme. Robert, free or vig.	H.R.	Moreau-Robert, 1876. Raised from <i>Jules Margottin</i> . Salmon- pink.
882. Souvenir de Marie Detry, free.	T.	Madame Ducher, 1877. Salmon- rose ; of inferior quality, not worth growing.
883. Souvenir de Mons. Boll, mod. or free.	H.R.	Boyeau, 1866. Cherry-red, large, very full.
884. Souvenir de Mons. Droche.	H.R.	Madame Ducher, 1880. Car- mine-rose, double.
885. Souvenir de Paul Neyron, mod.	T.	Levet, 1871. Said to be a seed- ling from the Noisette <i>Ophirie</i> . Pale salmon-yellow, medium

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
		or small size ; rather a good rose, but too delicate to be generally useful.
886. Souvenir de Pierre Dupuy, vig.	H.Ch.	A. Levet, 1876. Red, large, globular flowers, well formed, fragrant.
887. Souvenir de Mme. Pernet, vig.	T.	Pernet, 1875. Tender rose, the base of petals tinged with yellow, large loose flowers, sparsely produced. A distinct but not valuable sort.
888. Souvenir de Spa, mod.	H.R.	Gautreau, 1873. Raised from <i>Mme. Victor Verdier</i> . Bright red, shaded with crimson, well formed.
889. Souvenir de Victor Verdier, free or mod.	H.R.	E. Verdier, 1878. Red, shaded with violet crimson, a well-formed, good rose.
890. Souvenir de Wm. Wood, mod.	H.R.	E. Verdier, 1864. Belongs to the <i>Prince Camille</i> type. A fine, very dark crimson, not equalling <i>Prince Camille</i> .
891. Souvenir d'un Ami, free.	T.	Bélot, 1846. Rose, tinged with salmon, very large, full, highly perfumed ; an old favorite which yet retains its high rank.
892. Souvenir du Comte de Cavour, mod.	H.R.	Margottin, 1861. Red, shaded with crimson.
893. Souvenir du Dr. Jamain, free.	H.R.	Lacharme, 1865. Raised from <i>Charles Lefebvre</i> . Plum color, shaded with deep crimson.
894. Souvenir du Président Pocher, mod.	H.R.	T. Grangé, 1880. (Sent out by Vigneron.) Raised from <i>Victor Verdier</i> . Deep rose.
895. Standard of Marengo, vig.	H.R.	Guillot-père, 1851. Rosy-crimson, double, fragrant.
896. Stanwell Perpetual, mod.	S.	Lee. Blush, medium size, double, delicately scented, foliage very small, nine to

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
897. Star of Wal- tham, mod. or dwf.	H.R.	W. Paul, 1875. Carmine-crimson, medium size, semi-globular, full, fragrant; very large foliage, smooth green wood, with occasional red thorns. A good rose but not reliable.
898. Stéphanie - et- Rodolphe, vig.	Cl.T.	Levet, 1880. Raised from <i>Gloire de Dijon</i> . Orange-yellow.
899. Sulphureux, mod.	T.	Ducher, 1869. Sulphur yellow, medium size.
900. Sultan of Zan- zibar, mod.	H.R.	G. Paul, 1875. Crimson-maroon, in the style of <i>S. Reynolds Hole</i> ; very unhealthy habit.
901. Superba, vig.	P.	Feast, 1843. Pink, becoming blush, small, full, pretty.
902. Sydonie, vig.	H.R.	Dorisy, 1846. Rose color, medium size, very full, quartered form, very free blooming, very hardy; five to seven leaflets, red thorns. Its poor shape destroys its usefulness.
903. Tatiana One- guine, free.	H.R.	Lévêque, 1881. Raised from <i>Elizabeth Vigneron</i> . Carmine-red.
904. The Shah, free.	H.R.	G. Paul, 1874. Raised from <i>Duke of Edinburgh</i> . Red, shaded with bright crimson, rather small, full; a shy bloomer, and subject to mildew.
905. Théodore Bul- lier, free.	H.R.	E. Verdier, 1879. Carmine-red, tinged with violet-crimson.
906. Thérèse Gene- vay.	T.	Levet, 1875. Rose, tinged with fawn.
907. Thomas Meth- ven, free.	H.R.	E. Verdier, 1869. Red, tinged with velvety crimson, good size, well formed; a fine rose.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
908. Thomas Mills, vig. or free.	H.R.	E. Verdier, 1872. Rosy-crimson, very large, double; a good garden variety.
909. Thyra H a m- merich, mod. or free.	H.R.	Ledéchaux, 1868. Raised from <i>Duchess of Sutherland</i> . Rosy- flesh, large, well formed; dis- tinct and good.
910. T r i o m p h e d'Amiens, vig.	H.R.	Mille-Mallet, 1861. A sport from <i>General Jacqueminot</i> . Crimson, sometimes marbled and strip- ed with carmine-purple, but generally like the parent; not valuable.
911. T r i o m p h e d'Angers, mod.	H.R.	Moreau-Robert, 1863. Rich crimson, suffused with purple.
912. Triomphe de Beauté, free.	H.R.	Oger, 1853. Reddish-crimson, double, somewhat resembles <i>General Jacqueminot</i> , but much inferior.
913. Triomphe de Caen, dwf. or mod.	H.R.	Oger, 1862. Crimson, tinged with purple, a non-permanent shade, not desirable.
914. Triomphe de France, dwf.	H.R.	Margottin, 1875. Carmine-red, very large, very full, flat, fra- grant; a fine sort, but not re- liable, and of such poor growth as to destroy its value.
915. Triomphe de Jaussens, free.	Fr.	Crimson, large loose flowers, wood armed with short dark spines.
916. Triomphe de l'Exposition, free.	H.R.	Margottin, 1855. Reddish crim- son, large, rather coarse flow- ers, fragrant, numerous red thorns, hardy; occasionally comes very fine, but generally the quality is inferior.
917. Triomphe de Milan, mod.	T.	Madame Ducher, 1876. White, suffused with pale yellow, without fragrance; a fine rose, similar, but inferior, to <i>Marie Guillot</i> .

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
918. Triomphe de Rennes, free.	N.	Lansezeur, 1857. From <i>Lamarque</i> . Canary-yellow, the centre tinged with salmon, large, or very large, full, good.
919. Triomphe de Toulouse,	H.R.	Brassac, 1874. Red, shaded with violet-crimson.
920. Triomphe des Beaux Arts, free or vig.	H.R.	Fontaine, 1857. Raised from <i>General Jacqueminot</i> . An inferior likeness of the parent.
921. Triomphe des Romaines, vig.	H.R.	Gonod, 1873. Belongs to the <i>General Jacqueminot</i> type. Crimson, tinged with purple, fragrant, and of fair quality; a good seed-bearer.
922. Triomphe du Luxembourg, free.	T.	Hardy, 1836. (Sent out by Madame Pean.) Buff-rose, large, good in the bud, of healthy habit; a desirable sort.
923. Triumphant, vig.	P.	Pierce, 1850. Rosy-red, medium size, double or full, distinct; seven leaflets are common.
924. Ulrich Brün- ner, vig.	H.R.	Levet, 1881. Raised from <i>Paul Neyron</i> . Cherry-red.
— Unique.	M.	See White Bath.
925. Unique, vig. (<i>White Provence</i> .)	Prov.	Grimwood, 1778. White, a good rose, similar but inferior to <i>Madame Hardy</i> .
926. Vainqueur de Solferino, mod.	H.R.	Damaizin, 1859. Belongs to the <i>Giant of Battles</i> type. Red, shaded with purplish-crimson.
927. Vallée de Chamounix, mod.	T.	Ducher, 1873. Coppery-yellow and rose, medium size.
928. Vicomte Mai- son, vig.	H.R.	Fontaine, 1868. Cherry-red, double, fades quickly, straggling habit.
929. Vicomte Vig- ier, free.	H.R.	E. Verdier, 1861. Maroon, tinged with violet, a well-formed, globular flower.

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
930. Vicomtesse de Cazes, dwf.	T.	Pradel, 1844. Coppery-yellow, rather loose form, very delicate habit.
931. Victor Pulliat, mod.	T.	Ducher, 1870. Pale yellow, long buds, quite a good Tea.
932. Victor Trouillard.	H.R.	Trouillard, 1856. (Sent out by Standish & Noble.) Crimson and purple.
933. Victor Verdier, mod.	H.R.	Lacharme, 1852. Bright rose, with carmine centre, a very fresh shade, but not permanent, semi-globular form, of good size, not fragrant; very free, the wood is all but smooth, the foliage lustrous. This variety is doubtless of Bourbon origin; it is a beautiful rose, but with its entire progeny is more tender than any other types in the class.
934. Villaret de Joyeuse, free.	H.R.	Damaizin, 1874. Bright rose, well formed.
935. Ville de St. Denis, free.	H.R.	Thouars, 1853. From <i>La Reine</i> . Carmine-rose.
936. Violette Bouyer, free or vig.	H.R.	Lacharme, 1881. From <i>Jules Margottin</i> × <i>Sombreuil</i> . White, tinged with pink.
937. Virgil, free.	H.R.	Guillot-père, 1870. (Sent out by W. Paul.) Pink, tinged with lavender, not valuable.
938. Viridiflora, free. (<i>Viridiscens</i> .)	Beng.	Green flowers, of no beauty whatsoever, only sought for as a curiosity.
939. Virginale, mod.	H.R.	Lacharme, 1858. White, with flesh centre, medium size, double or full, well formed; a good rose, but of very delicate habit.
✓ 940. Viscountess Falmouth, dwf.	H.T.	Bennett, 1879. From <i>President</i> × <i>Souper-et-Notting</i> . Mottled

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
941. Vulcain, mod.	H.R.	<p>rose, the exterior of petals with a silvery lustre, very large, very full, globular, having the intense fragrance of <i>Soupert et-Notting</i>, and like that variety inclined to come malformed. The wood is very thorny, the shoots slender.</p> <p>E. Verdier, 1862. Rich crimson, double, well formed; a rose of splendid color.</p>
942. W. A. Richardson, vig.	N.	<p>Madame Ducher, 1878. Orange-yellow, medium size, of fair quality.</p>
943. W. Wilson Saunders, mod.	H.R.	<p>G. Paul, 1874. Belongs to the <i>Charles Lefebvre</i> type. May be briefly described as an inferior <i>Charles Lefebvre</i>.</p>
944. Washington, vig.	N.	<p>Stewart (of Philadelphia). White, medium size, loose flowers, poor.</p>
945. White Banksia, vig.	B'k.	<p>Brought to England from China in 1807. Pure white, small full flower, violet-scented.</p>
946. White Baroness, mod.	H.R.	<p>G. Paul, 1882. A sport from <i>Baroness Rothschild</i>. Unlike <i>Mabel Morrison</i>, this is quite as full a rose as the parent, and it is pure white; in other respects, as vigor of growth, etc., it is identical with <i>Baroness Rothschild</i>. We saw this in flower at Cheshunt during the summer of 1880, and were greatly impressed with its merit.</p>
947. White Bath, mod. or free. (<i>Unique</i>).	M.	<p>Salter. A sport from the <i>Common</i>. White, sometimes tinged with flesh, attractive in bud</p>

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
White Prov- ence.	Prov.	and open flower; generally five leaflets, of straggling habit. Much the best white moss. See Unique.
948. William Grif- fith, free.	H.R.	Portemer, 1850. Pink, much resembling <i>Countess C. de Chabillant</i> , but the flowers are somewhat smaller, the wood smoother, and in habit it is more vigorous, but also much more liable to injury from the cold.
949. William Jesse, free.	H.R.	Laffay, 1840. Red, suffused with violet, in the way of <i>Pius the Ninth</i> . An undesirable sort.
950. W i l l i a m Kœlle, mod.	H.R.	Pernet, 1878. Raised from <i>Alfred Colomb</i> . The flowers are nearly or quite the same shade as those of the parent, the habit is partially that of <i>Charles Lefebvre</i> .
951. William Lobb, free.	M.	Laffay, 1855. Violet-red, not an attractive sort.
952. William War- den, vig.	H.R.	Mitchell & Son, 1878. A sport from <i>Madame Clemence Joigneaux</i> . Pink flowers, the habit, etc., is the same as that of the parent.
953. Woodland Marguerite, vig.	N.	J. Pentland, 1859. White, sometimes with flesh, medium size; of fair quality.
954. Xavier Olibo, mod. or dwf.	H.R.	Lacharme, 1864. Said to be from <i>Gen. Jacqueminot</i> . Very deep, rich crimson, large flowers, moderately full; a superb rose.
955. Yellow Bank- sia, vig.	B'k.	Brought to England from China in 1827. Like <i>White Banksia</i> ,

NAME OF VARIETY, AND HABIT OF GROWTH.	CLASS.	
956. Yellow Tea. Yolande d'Ar- agon, free.	T. H.R.	except the color, which is clear yellow. See <i>Flavescens</i> . Vibert, 1843. Lilac-rose, flat form, straggling habit ; worth- less.
